Regd. No. 679591

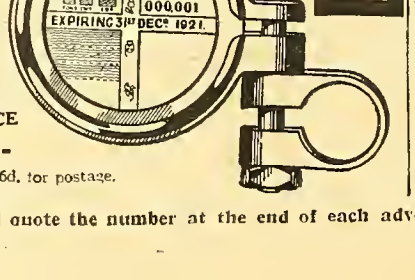
THIS is the Lamp.

Here's the latest F.R.S. lighting set—a correctly made Stream-line lamp, that looks just perfect on a motor cycle. Gives a wonderful beam of light.

Embodies the F.R.S. patent ONE NUT attachment, adjustable focus, genuine optical mangin mirror, non-glare chimneys and special type of door fastening.

Examine it at your agent's—note its superiority in design and quality—then fit it and you'll have no trouble with lighting. Price: 6" set £4 4 0, 5" set £2 15 0.

Regd. No. 679275.



THIS is the Horn

to clear the way—gives a powerful, yet harmonious warning note. Embodies a special reed, immovable dust cap, and the ONE NUT attachment. Finest smooth black and N.P. finish. Price 22/6.

THIS is the Holder

that surpasses all others in design, utility, and simplicity. Adjustable to ANY angle. Note the ONE NUT attachment. No ugly screws showing, and no sharp edges projecting. Nothing to rust or shake loose. Even pressure all round the rim which holds the card, etc., making it absolutely waterproof. Supplied in brass, n.p., black and brass, or black and n.p. Delivery from stock.

F.R.S. LAMPS,
Vere St., BIRMINGHAM.

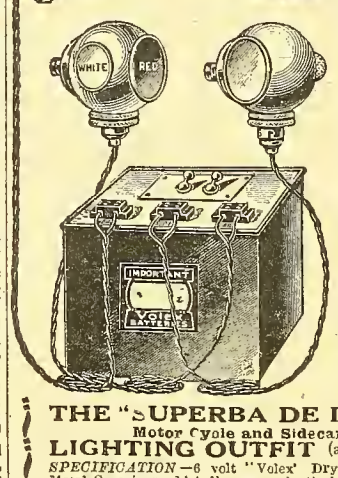
"VOLEX" DRY BATTERY LIGHTING OUTFITS

Motor Cycle and Sidecar



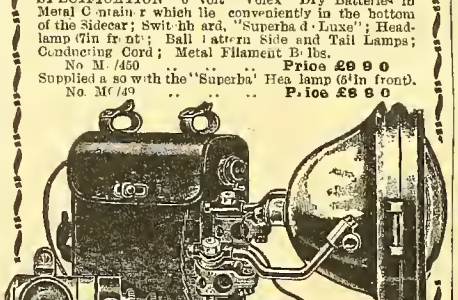
British Made.

THESE SETS have been sold in immense quantities during recent years and have achieved an unparalleled success for this service. In consequence of their dependency over Accumulators and Dynamo Outfits the demand is constantly increasing

Dynamo Lighting Sets with accumulator require careful attention, and owing to complications have a tendency to go out of order. Accumulators if not regularly charged, sulphate and become useless

The "Volex" Dry Batteries require no attention, and with ordinary care will last from 14 to 18 months without renewal and new Batteries can be fitted in a few moments at but little cost.

THE "SUPERBA DE LUXE" LIGHTING OUTFIT (as illustrated)



Motor Cycle and Sidecar

SPECIFICATION—6 volt "Volex" Dry Batteries in Metal Container which lie conveniently in the bottom of the Sidecar; Switchboard, "Superba de Luxe"; Headlamp (7in front); Ball Pattern Side and Tail Lamps; Connecting Cord; Metal Filament Bulbs.

No. M./450 .. .. .. **Price £9 9 0**

Supplied also with the "Superba" Head lamp (6½in front).

No. MC/49 .. .. .. **Price £8 8 0**

THE "SUPERBA" LIGHTING OUTFIT,

Motor Cycle Head and Rear

comprising "Superba" (6½in front) Motor Cycle Headlamp, "Jewel" illuminated Rear Lamp, Set of Bulbs, Conducting Wires, Switch, and "Volex" 6 volt "Aero" Dry Battery in Strong Leather Satchel Container.

No. M10/10 .. .. .. **Price £5 1 0**

Motor Cycle Head Set as above without Rearlight.

No. M10/7. .. .. .. **Price £4 15 0**

"VOLEX" DRY BATTERIES

British made

The most powerful Dry Batteries on the market. Unsurpassed for Ignition, Lighting Operating Electric Horns, etc.

Type	Volts	Size	Price

When will Prices Fall?

IT is plainly apparent that a considerable section of the buying public are withholding orders till prices fall. The question uppermost in their minds is, when will this longed for event take place? To this same question we have given it as our opinion that the fall so keenly awaited is actually being delayed by the withholding of orders.

Elsewhere in this issue, we publish some notes on the trade outlook from the pen of a writer well acquainted with the manufacturer's point of view and the special difficulties with which he is having to contend at the moment. The statement forms interesting reading at this juncture, and bears out the editorial remarks in our issue of January 27th.

The greatest difficulty lies in the fact that on account of the enormous demand for motor cycles during the early part of 1920, manufacturers were compelled to purchase stocks of material at about "300% over pre-war prices." Some of that stock still exists, and until this material has been absorbed, there would appear to be only two alternatives: (1) to lower the price by providing second-class equipment; or (2) to cut losses and liquidate the stock by selling at the best prices obtainable. The first of these alternatives is not likely to appeal to the general public, nor is it calculated to improve or sustain the excellent reputation of British goods abroad. The second alternative is entirely out of the question so far as a large number of firms are concerned, since their present financial status would not enable them to withstand the loss. The matter is further complicated by the fact that many of our overseas markets are at present closed to us, and consequently, since the rate of production is reduced, prices tend to remain high.

Thus, it will be realised that a reduction in the market price of certain materials and equipment cannot have any immediate effect upon prices of the finished article, since the crux of the matter is the absorption of existing stocks.

The Weight Question.

ALTHOUGH little has been definitely settled regarding the regulations for the Six Days Trials, there appears to be signs that at last weight will be a deciding factor. For long we have urged that encouragement should be given to the light machine, and we have frequently drawn attention to the fact that, while trials organisers have insisted upon minimum weights as a factor of safety, maximum weight has been more or less ignored.

Now that the taxation schedule automatically divides solo motor cycles into two classes, *i.e.*, those not exceeding and those exceeding 200 lb. in weight unladen, and as one class is subject to double the taxation of the other, it behoves every manufacturer to consider weight reduction seriously.

There are several suggestions appertaining to the regulations of this year's Six Days Trials which revolve around the 200 lb. line of demarcation. In the preliminary regulations it was proposed that all machines with engines exceeding 350 c.c. should propel sidecars. We did not agree with this, and we were not surprised to know that it had been unanimously opposed by the Advisory Committee to the A.C.U. Competitions Committee, and as the trade is represented on the former, the suggestions of the one and the recommendations of the other may almost be regarded as negotiations to arrive at regulations which will be satisfactory both to the A.C.U. and the trade. The A.C.U. evidently desired that all machines over 350 c.c. should propel sidecars: the alternative suggestion is that special team prizes be offered for solo machines of under 350 c.c., under 500 c.c., and for two classes of sidecars. As an outcome of these negotiations it may be agreed that, instead of 350 c.c. being the deciding factor as to what is and what is not a solo machine, a 200 lb. limit be placed on the solo machines which may be of any engine capacity. Such a regulation undoubtedly would encourage a more serious consideration of this important question.

An Index to the advertisements in this issue will be found on the page facing the back cover.

OCCASIONAL COMMENTS

BY IXION

How Many Tubes?

VARIOUS Olympian critics—jaundiced, doubtless, by their financial interests in sidecar or cycle car factories—opined that the Scott Sociable comprised more tubes than any chassis ever offered to the public, and compared it to the jousts set for a game of spillikins. In actual fact many twin-cylinder sidecar outfits are constructed from more tubes than the Scott Sociable. A well-known single-cylinder outfit comprises, I believe, some three dozen tubes, divided by differences of gauge, length, and shape into *twenty-six different types*. A Scott Sociable chassis is built up of forty-three tubes, divided into *no more than four* different types, even if we count the steering column as a "type." In other words, this chassis is, comparatively speaking, an excellent production job. But what a comfort its jagged triangles would have been to the lighthouse man in Kipling's yarn, who went mad because all the currents in the Straits ran the same way!

Designer Forward, Please!

THE above paragraph reminds me of a recent visit to a baby two-stroke factory (read the last three words either way, as you prefer). The production expert had just got down to counting the number of bits which assembled into one complete machine. He found they totted up to 563. "Not so dusty," he remarked. "Now let's see how many bits go to each component, and perhaps we can pare a few off." When the factory statistician reported that seventy-one of the 563 bits were accounted for by the brakes, the air was soon full of steel filings, as the P.E. did his war-dance. "What the megohm is the use of concentrating on an engine with only one and a half moving parts if your vermilion brake . . . ." etc., etc. The drawing office is now *very* busy.

Weight and Handiness.

MR. D. S. Heather has routed me horse, foot, and artillery on the question of the weights of the various machines which I rode in 1920. I put none of these machines on the scales, and, in my review of their several performances, I implied that the 4¼ h.p. B.S.A. was the heaviest of the bunch, and perceptibly weightier than the Norton, Scott, and A.B.C., whereas in the Six Days the lightest B.S.A. and Scott were 7 lb. lighter than the lightest Norton and A.B.C. These hard facts are clean contrary to my personal impressions; for in the absence of a weighbridge I should have bet heavy money that the Scott was easily the lightest of the quartette, with the Norton second, and the B.S.A. bad fourth, close behind the A.B.C.'s bad third. This contrast raises an interesting point. It may be that my personal impressions are hopelessly at sea, my memory unreliable, my judgment influenced by little accidents of difficult starting, stupid attempts to push into garage against a slope, etc., etc. Or, contrariwise, as "Tweedledum" hath it, it may be that actual weight on the scales is a minor matter compared with certain obscure factors which make for handiness or the want of handiness. For example, a machine with a heavy tail will feel less handy than a machine which has its weight evenly distributed between the two wheels, when it comes to lifting the 'bus on to the stand; and stand design will again affect these impressions. Again, a machine in which the relative positions of the saddle and handlebar do not quite fit the rider's arm reach may seem less handy than a heavier machine which fits his reach, and so on. I am naturally unwilling to admit that my impressions are groundless, while I gracefully bow to the B.S.A. and ask its pardon for considering it heavier than it is.

Yet Another Exhaust Valve!

STAINLESS steel valves are proving highly satisfactory in some engines. In others it is found that this very hard steel may develop too much of a "Mary Ann" punch for valve seats cast in certain grades of cylinder iron. So one firm of engine makers are experimenting with cast iron valve heads and steel valve stems. Readers will remember that such a composite valve was at one period used in the Triumph engine. In that case, unless memory betrays me, the valve head was screwed on to a threaded valve stem. The valve to which I am now referring has its head cast on to a ribbed valve stem, the temperature being such that the two metals are practically fused into each other.

Gradient Meters.

IN frankly stating that the Tapley gradometer is not proof against the effects of acceleration and retardation I cast no slur upon it; I do not think it possible to design a gradometer which shall be "dead beat" under all conditions, and the Tapley is quite astoundingly steady when the machine is driven at a uniform speed, even over bad surfaces. It is separated in this respect by a perfect chasm from the arched spirit level type of gradometer, in which the bubble is never still; and those who by experience of the latter type have come to despair of the gradometer for motor cycling purposes should make a point of testing the special motor cycling model which Mr. Tapley has in preparation. I think they will like it.

Ixion's "MOTOR CYCLE REMINISCENCES" have just been published in book form, price 5s. 3d. post free, from "The Motor Cycle" Offices, 20, Tudor Street, E.C.4.

How it is Done.

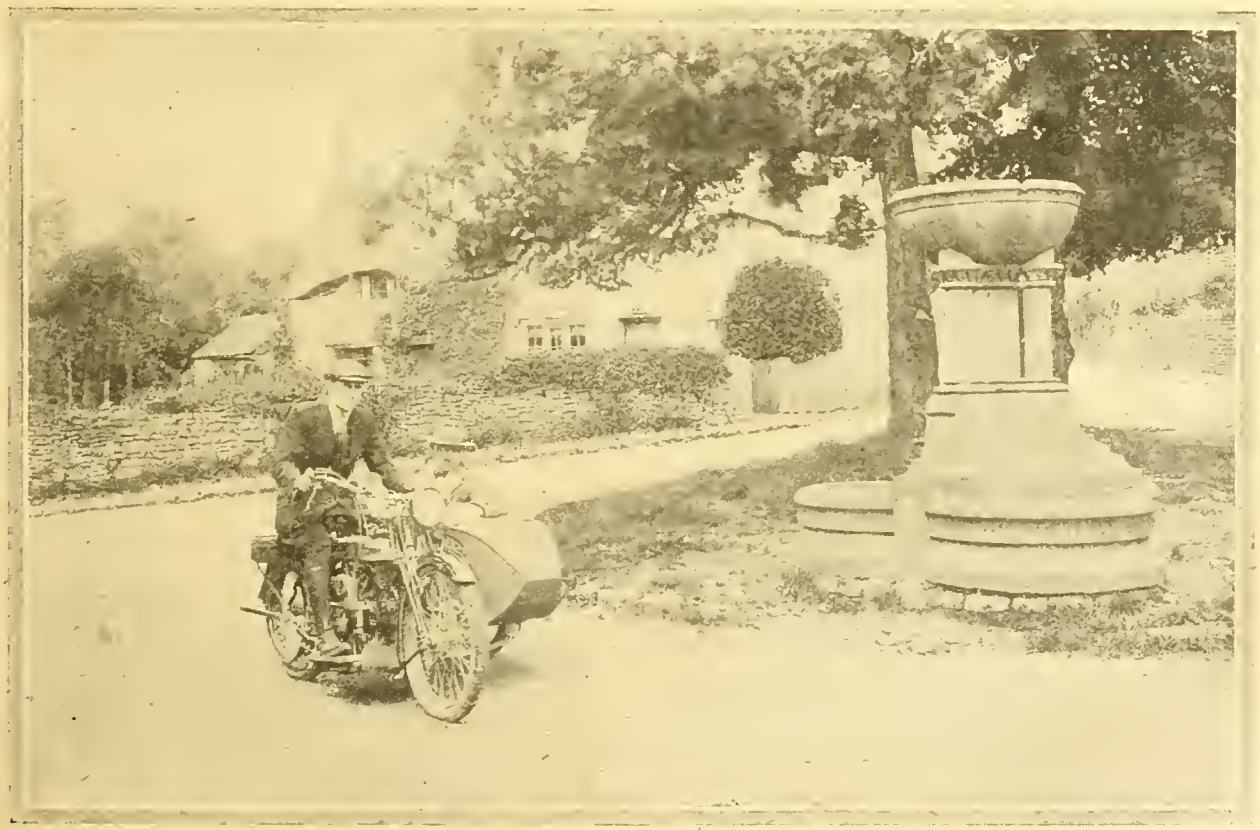
I RECENTLY commented on the fact that full electric equipment is only a £3 extra on the Harley-Davidson, whereas it is often a £20 extra on British 'buses. The H.D. advertisement manager at Milwaukee informs me that since April, 1920, the entire ignition and generator unit has been manufactured in the Harley-Davidson works, even the armatures being wound in their own works. It is, of course, doubtful whether our comparatively small outputs would permit of a similar policy being adopted over here.

A Very Hot Spot.

WHO was the merchant who heard that you could increase the speed of any baby two-stroke 10 m.p.h. by the mere adoption of an aluminium piston? Is it true that when he verified the allegation on Brooklands he melted a neat little crater right through the centre of the piston crown? In the sequel, did he fit a more thick-headed piston and beat 60 m.p.h.?

Be the above true or untrue, the baby two-stroke seems to be on the boom. I already hear of baby two-strokes which *never* dry up, which *never* jam their piston rings in the grooves, and which *never* develop two-stroke rattle.

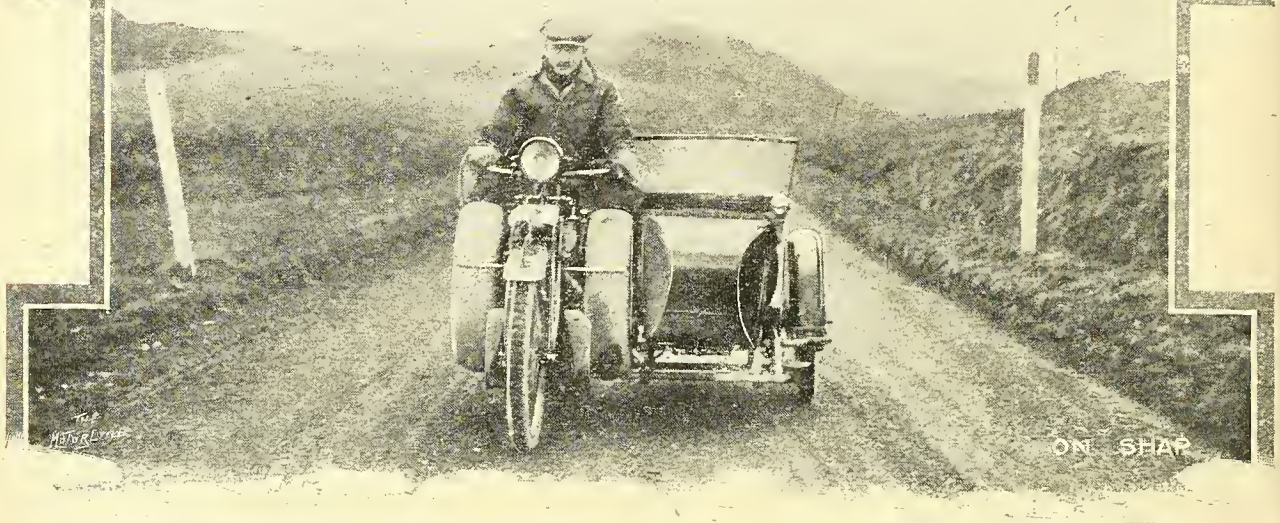
There are also yarns of several interesting new engines in this class—to particularise, one which has exhaust ports approximating to an arc of 360°, and another (with a water-cooled head) to sell in 1922 with a guarantee of at least 55 m.p.h.



Petrol Supply in U.S.A.

A BRISTOL agent, who has just returned from the United States, tells me that the American dealer buys his petrol in barrels by weight, allowance being made for the tare of the barrel. With temperatures ranging from 100° in the shade to 40° below zero some such method is obviously desirable. The man who buys from a standpipe gets his full gallon, and the dealers consider that they make rather than lose by the system. And do not our garage men continually complain that one and one do *not* make two—in gallons of motor spirit?

Utility or Swank?



OUR American contemporary has been throwing cold water on the popular dream of a simple, cheap Ford type of motor cycle. Its notion is that, if a man can afford a motor cycle at all, he will chuck caution to the winds, and order the best that money can buy. If this be true, it follows that the sales of a rock-bottom, mass-produced proposition would be far less than many people suppose, and that it would be a risky business for a factory to stake its future on the idea.

Ford is credited with saying that an output of about 10,000 machines is the most economical figure. There is not the slightest doubt that there is an annual sale in this country for 10,000 Ford type motor bicycles (probably many more), provided, of course, that they compare as favourably with more expensive machines as the Ford car compares with conventional cars.

OFF THE BEATEN TRACK. Newton St. Loe, better known to Bristol and Bath motor cyclists than to those who pass through Somerset *en route* to Devon and Cornwall.

RIDING TO WIN.

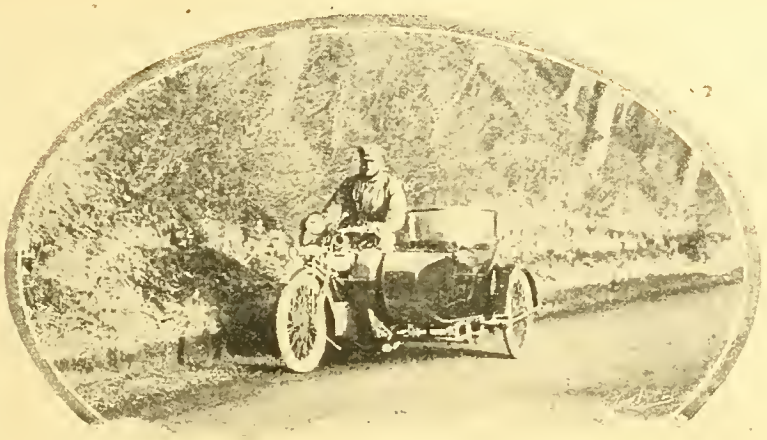
From Aintree to Edinburgh and Back on an 8 h.p. Royal Ruby Sidecar in the Liverpool M.C. Winter Trial.

ABOUT the time of the last Olympia Show it was suggested to us that we should occupy the sidecar of one of the new 8 h.p. Royal Ruby spring frame outfits during a one-day demonstration run amongst either the hills of Yorkshire or the Lake Country, and it was arranged that this trial should take place during the early months of the present year.

While awaiting a favourable opportunity for this test, however, we learned that Mr. Hugh Gibson, the well-known trials rider (who joined the Royal Ruby Co. late in 1920), was about to make his first competition appearance as a driver of this make in the Liverpool M.C. Two-day Winter Trial to Edinburgh and back, and we gladly fell in with the suggestion that we should join him on this run. Accordingly, on January 22nd. we were at the starting place (the Old Roan Hotel, Aintree, near Liverpool) all prepared for the long journey.

Comfort for the Passenger.

The morning was a dismal one, a bitter north-westerly breeze was blowing from the Irish Sea, and a good deal of rain was falling, but an inspection of the luxurious sidecar on the Royal Ruby machine convinced us that the driver alone would suffer from the elements. After having our watch sealed, we were given the word to go at 8.30 a.m., and as the outfit carried "Number 1," we did not see much of the other competitors until our first stop was made in Garstang. Here we paused awhile in order to photograph some of the others as they came along, and our wait was surprisingly long, for apparently the machine had travelled at well above schedule speed owing to the small amount of traffic on the roads.



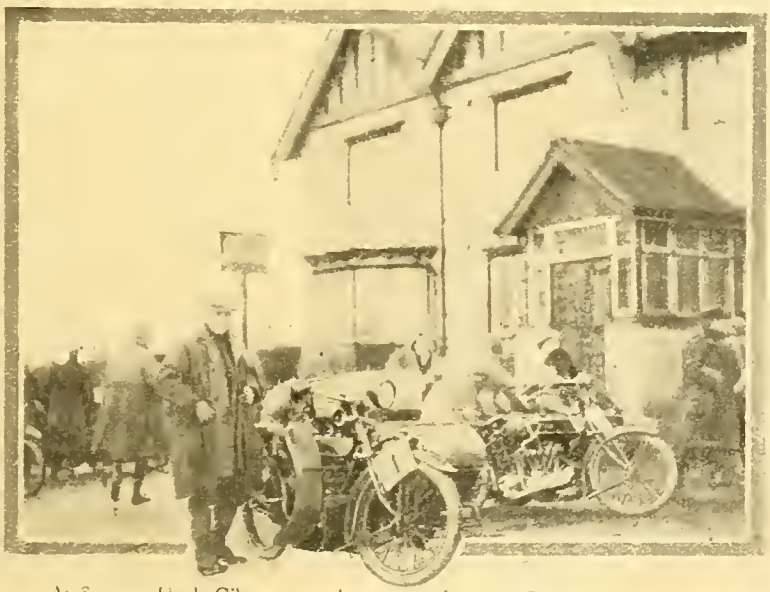
The first time check was in Kendal, about seventy miles from the start, and arriving on the outskirts of the town it was found that there was almost half an hour to spare before checking in, and consequently we drew into the roadside and waited for the other competitors to appear. The roads had been very wet and heavy in places, but despite this, the machine was remarkably clean, thanks to the efficient mudguards and legshields which were fitted. The sidecar had proved to be very comfortable, and its great depth in conjunction with the Easting windscreen provided every protection for the passenger.

Over Shap Fells.

After checking in (in the main street) we made directly for Shap, since it was our intention to stop for lunch in Penrith. Although the gradient of Shap Fell is not abnormal, the long climb and the poor surface of the road are quite a good test for any machine, and as a strong wind was blowing in uneven gusts from the direction of the Lakeland hills, it was not to be wondered that the 8 h.p. J.A.P. engine of the Royal Ruby was unable to take the outfit to the summit on top gear. A change down into second gear had to be made after about threequarters of the ascent had been covered, and in view of the fact that the outfit with driver, passenger, and luggage must have totalled at least 8 cwt., the performance was remarkably good. On the smoother descent into Shap village and along the main road to Penrith surprisingly high speed was made, and a welcome meal was taken when the latter town was reached.

Onwards from Penrith through Carlisle, Langholm, and Hawick to Edinburgh the run was uneventful;

Riding to Win.—



In the early morning sunlight. The 8 h.p. Royal Ruby near Selkirk on the return journey.

few of the other sidecar competitors were seen, but several of the soloists, having apparently carried on without lunch, were hurrying towards the Scottish capital in order to reach the finishing point before darkness set in. This was perhaps a wise move on their part, as the roads around Hawick and Selkirk were in an appalling condition, and even our big sidecar outfit showed a slight tendency to skid in places. On a normal stretch of road, however, it was quite possible for the driver to release the handle-bars for at least 200 yards, and the outfit continued in a straight course; for a heavy spring frame machine this is indeed remarkable, and we have seldom seen a machine which would steer in the same easy way.

Arriving in the vicinity of Edinburgh two hours before we were due to check in (having had an absolutely no-trouble run), we were able to book rooms, have a meal, and rid ourselves of all traces of the journey before running into the control, and thus we were able to leave the machine at once and look around the sights of Edinburgh, not forgetting the Edinburgh M.C.C. headquarters at Castle Terrace.

Back to England.

A beautifully clear sunrise greeted us next day, and the Castle, from Princes Street, looked at its best, silhouetted against the morning sky, but we had no time to spare in admiring the architectural beauties of the city, as we were scheduled to leave at 8 a.m. The promise of the morning was not borne out, for by the time we were amongst the hills on Teviot Head rain was falling heavily, and the comfort and protection of the sidecar were appreciated to the full. No time check was included in this day's run before the summit of Kirkstone Pass, and as this was to be the deciding check, it was a matter of some difficulty to estimate the speed which should be maintained. After some little discussion during a stop in Langholm to clear a choked jet, we decided on our plan of action as follows: A good average was to be maintained until we reached Penrith; here we would stop for lunch, and also change the back wheel for one fitted with a steel-studded tyre, in order to make a certain climb of the Pass, no matter what the condition of its surface. From Penrith to the non-stop section (Patterdale Hotel) was eighteen miles, and we decided that an hour and twenty minutes should be allowed for this; then, before entering the non-stop, we would wait until a bare twenty minutes was left for covering the four and a third miles to the check. This plan of action was carried out so far as changing the back wheel and starting out for Patterdale was concerned; but within sight of the latter place, and after wasting most of our time by touring gently along the shores of Ullswater, it was noticed that the new steel-studded rear tyre was going down, and we were just able to stop before entering upon the non-stop section. Time was now precious, but thanks to the quickly detachable wheels of the outfit, we were able to replace the original back wheel with its plain rubber cover and get on our way without falling behind our programme. Although it was fine at the lakeside, there was a heavy driving rain and a powerful head wind blowing down the Pass as we commenced the climb. There was also some uncertainty as to the exact location of the check, but our calculations proved correct, and when we rounded the final bend the check came into view, and we were able to regulate our speed against the watch in order that we might reach the timekeeper dead on schedule.

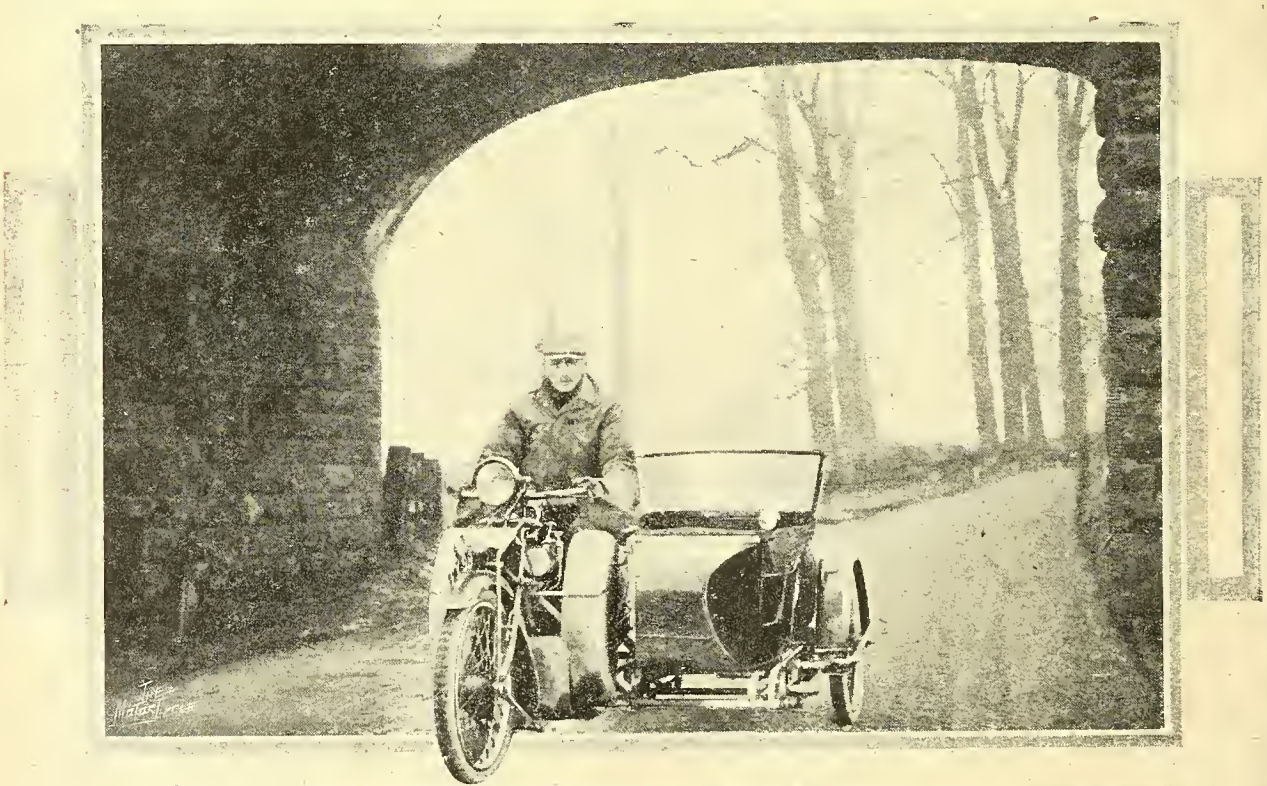
At 6 a.m. Hugh Gibson preparing to start from the Old Roan Hotel, Aintree, in the Liverpool M.C. trial to Edinburgh and back. This was his first competition on the Royal Ruby outfit.

This is one of the great advantages of a machine such as the Royal Ruby, which has ample power under all circumstances.

Riding to Win.—

for we were able to lose speed by crawling on low gear and then accelerate up to the timekeeper, just as the hand of the watch was a few seconds off the required time, whereas a machine with a smaller reserve of power would have been compelled to keep up its speed in order to accomplish the climb, and so would have checked in early.

Rain, Wind, and Darkness.



The descent from the top of Kirkstone into Windermere was made in haste against a blinding rainstorm. Darkness was rapidly approaching, and there were some seventy miles of twisting roads to be covered before the finish was reached. It was therefore decided (in order to have time in hand should trouble arise) that the best possible speed should be maintained so long as daylight lasted; and when an expert like Hugh Gibson decides that speed is to be kept up, and the machine itself is capable of doing a little over 50 m.p.h., there is nothing for the passenger to do but to sit tight and to put his trust in the skill of the driver and his "lucky star." Perhaps it was fortunate that this speed burst was indulged in, because after passing through Lancaster, where the lights were first switched on, the head lamp bulb gave out, and we were compelled to ride some distance in the lights of a large car which was travelling in the same direction. The spare bulb had also given up the ghost on the outward journey, and it was apparently impossible to obtain a Lucas bulb either in Edinburgh or in any of the other places *en route*. However, after ten miles of riding in semi-darkness, with only the dim filament of the head lamp glowing, the full power of the light mysteriously reappeared, and it gave no more trouble until the end of the journey was reached.

Thanks to an intimate knowledge of the roads across Lancashire, almost an hour was saved on our schedule for the last seventy miles, and we were thus able to waste this time in the vicinity of the final control and crawl in, as at all the other checks, with the minute hand of the watch dead on the time indicated on our route card.

Thus ended our 400 mile two-day journey. In this retrospect it may appear to have been a most uninteresting ride; indeed, it was so, if by "interest" we refer to troublesome incidents connected with the machine. Altogether the outfit proved itself capable of accomplishing the journey to time with the speed and reliability of a train.

Advantage of Frame Springing.

The Royal Ruby system of adjustable frame springing which is applied to both the machine and sidecar chassis proved most effective, since the driver himself did not show any signs of suffering from vibration after the long period in the saddle, while the sidecar was perfectly comfortable over the worst stretches of road which were encountered, and some of these, especially in Lancashire and in the vicinity of Edinburgh, were as bad as anything which can be imagined. Our run was satisfactory in every way: especially so when we learned that the 8 h.p. Ruby had been successful in gaining a gold medal and had tied with another 8 h.p. outfit for the principal award (the Horsman Cup), which was awarded for the best performance in the trial.

Ready to check in at a control after "killing time" under the comparative shelter of a railway bridge Observe the ample mudguarding of the Royal Ruby machine

MODERN SPRING FORKS.

Notes on the Ways and Means Adopted by Twenty-seven Makers to Absorb Front Wheel Shock.

TO appreciate even faintly what the spring fork does for us, one must imagine doing without. The rigid frame machine is a quite practical and very popular proposition: but the rigid fork on the mechanically-propelled two-wheeler is extinct.

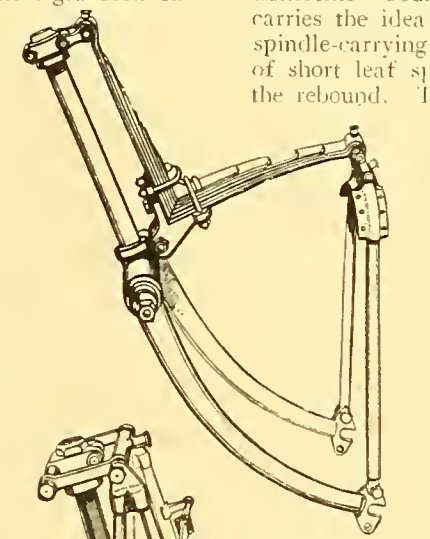
Had the idea of a spring fork never arisen, had the idea never developed into something workable, reliable, and efficient, then the motor cycle, as we know it to-day, might be non-existent.

Desirable Qualities.

Good as present-day forks are, a wide divergence in design and method in attaining the one end seems to indicate that finality has not been reached. Probably not; but it must be remembered that even the best types are based on a compromise and, unfortunately, a compromise between more than merely two factors. Comfort, ease of steering (under which must be included steadiness at all conditions), reliability (immunity from danger of sudden breakages), and durability (that is, maintenance of efficiency, and particularly lateral stability), all must be studied in the evolution of a front wheel springing system. It is but natural, therefore, that designers should struggle to these ideals by widely differing paths.

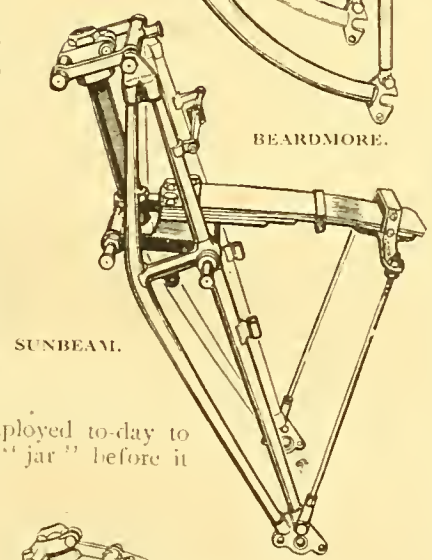
Our present purpose is to explain and analyse the various methods employed to-day to trap as far as possible front wheel "jar" before it reaches the machine and the rider.

Forks may be most readily and intelligibly classified into five general categories, by considering the movement or motion they permit of the wheel (or wheel spindle) when in action. Tabulated, these five types are:



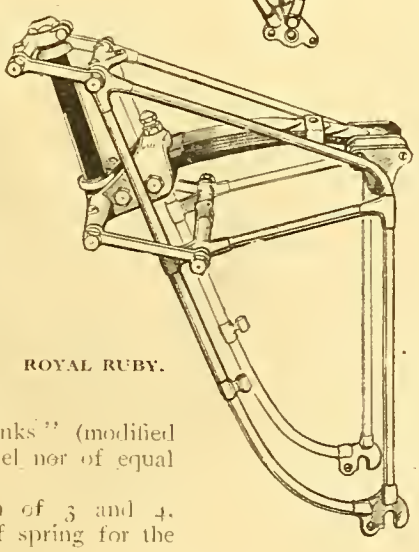
(1.) Vertical or slightly inclined straight line movement.

(2.) *(a)* Short radial movement in *front* of a low down pivot; or *(b)* short radial movement *behind* a low pivot.



(3.) "To and fro" radial movement on a pivot at the foot of the steering head.

(4.) Upward (or vertical) curving motion obtained by two "parallel links" (modified in some cases by being neither parallel nor of equal length).



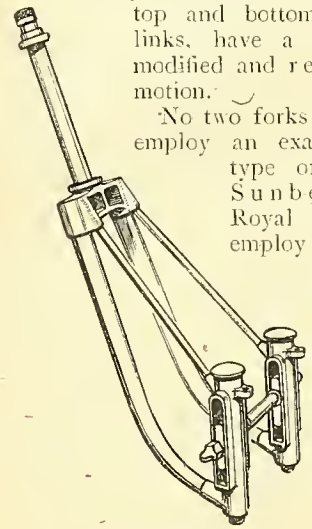
(5.) Approximately a combination of 3 and 4, obtained by substituting some form of spring for the top pair of links.

BEARDMORE.

SUNBEAM.

ROYAL RUBY.

Class 1, despite the fact that it lends itself admirably to enclosed shock and rebound springs, and to a strong and neat construction, has but three adherents—Coulson, Scott, and Wooler. And each carries the idea out differently. On the Coulson the spindle-carrying rods are linked at the top to a pair of short leaf springs, with two coil springs, to take the rebound. The Scott makes use of a duplex fork bridged by a plunger working against a single large compression spring; while the Wooler spindle floats on two pairs of coil springs in short upright guides.

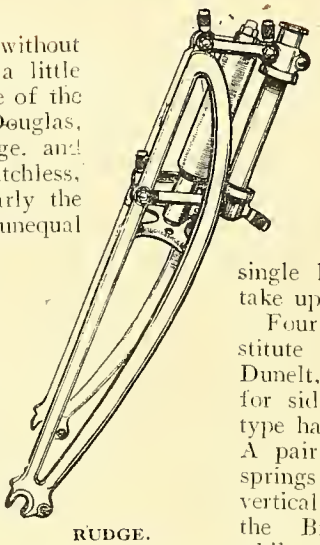


Suspending the wheel on short radius rods (Class 2) formed one of the earliest methods, and it still holds good on at least seven machines—Chater-Lea, Corona, F.N., Harley-Davidson, Indian, L.M.C., and P. and M. Excepting the Indian, their wheels all describe an arc in front of the pivot, and here again the actual springing is very varied. An extension of the pivot rearwards on the L.M.C. simply pulls against two coil springs—a very simple but flexible construction. On the Corona a similar extension, but at right angles, converts a "vertical" movement to a horizontal motion checked by enclosed springs. Both the F.N. and the Harley make use of duplex vertical stays containing coil springs—in the latter separate springs are used for shock and rebound. The Chater-Lea favours the simplicity of two sturdy unenclosed coil springs mounted above the duplex girder, while the P. and M. uses a pair of naked tension springs for shock stresses and a central enclosed coil for rebound. Doubled-back laminated springs reaching out from the steering head efficiently clamp both these movements on the Indian. It is noteworthy that both the well-known American machines make use of the short pivot system.

No Vertical Movement.

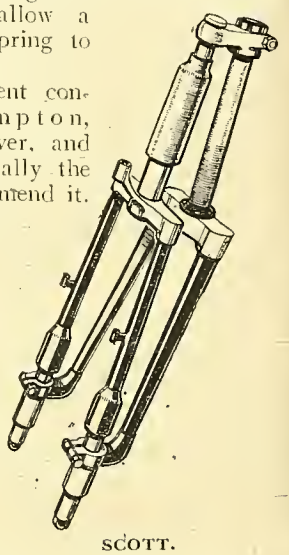
Only two forks of the types illustrated come into Class 3, by using the clean-looking and almost wear-proof action so long embodied on the Triumph. The other, of course, is the Beardmore, which, however, embodies two laminated springs set at right angles in contradistinction to the single short coil, or more recent enclosed shock and rebound, buffers on the Triumph.

Modern Spring Forks.—



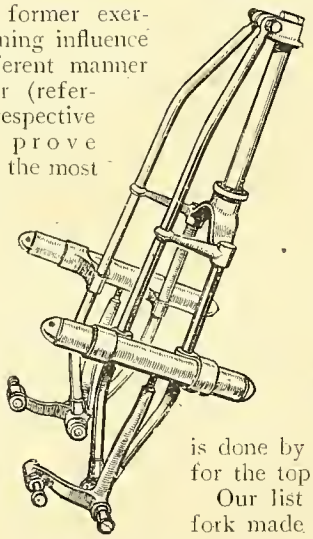
Class 4 is easily numerically superior without including the nearly allied Class 5, but a little study will prove that not all in Class 4 are of the true parallel link type. B.S.A., Cedos, Douglas, Druid (old type), Edmund, Enfield, Rudge, and Saxon all must be included: but the Matchless, Royal Ruby, and Sunbeam, and particularly the Matchless by reason of non-parallel and unequal top and bottom connecting links, have a considerably modified and restrained motion.

WOOLER.



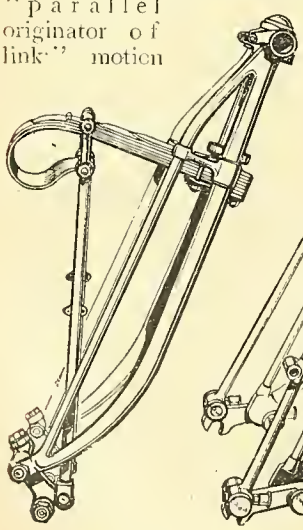
No two forks in this class employ an exactly similar type of spring. Sunbeam and Royal Ruby both employ a single flat laminated spring, but the spring in the former exercises its restraining influence in quite a different manner from the latter (reference to the respective drawings will prove this). Perhaps the most interesting of this batch is the Edmund, which has a vertical semi-elliptic spring with an action that may best be described as "frictionally retarding a parallelogram from becoming a rectangle," a description perhaps not technically brilliant, but, we hope, lucid!

The remainder embody from one to four coil springs, as follows: B.S.A., a single central coil, which is compressed under load; Cedos, the same in a shorter housing: Douglas, two long exposed tension springs which, of course, expand under load; Druid, "parallel originator of link" motion (on the latest pattern, however, the lower links allow a rocking motion to the girders more nearly allied to Class 5); Rudge, entirely enclosed central telescopic plunger type shock and rebound springs (incidentally, the Rudge fork enjoys a long-standing reputation for fine steering qualities); and, lastly, the Saxon, where angular extensions of the lower links allow a single horizontal coil spring to take up all shocks.

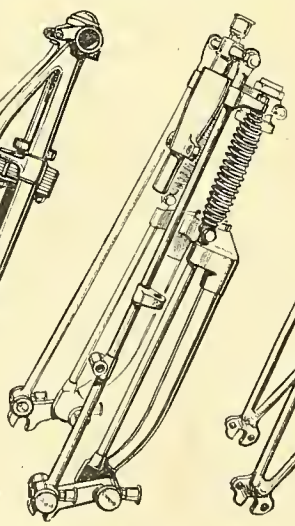


RUDGE.

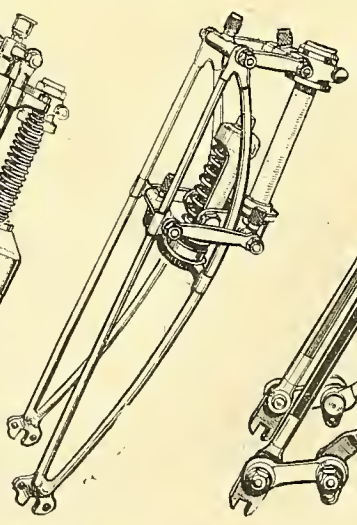
Four names at present constitute Class 5—Brampton, Dunelt, O.K., and Rover, and for sidecar work especially the type has much to recommend it. A pair of tension springs provide the vertical movement in the Brampton fork, while two further pairs of smaller coils mounted on the upper links effectively damp "to and fro" swing. Upward shock on the Dunelt is absorbed by a single five-leaf spring, while the top pair of links act as plungers against tension springs extending towards the rear of the steering head. The O.K. design is notable for the manner in which it combines simplicity with a wide range of action; this is done by substituting a pair of helical leaf springs for the top links.



SCOTT.



CORONA.



Our list of twenty-seven does not represent *every* fork made: but it is representative of every *type* of fork shown at Olympia last year.

Road Tests of New Models

THE 1921 3½ h.p. T.T. SUNBEAM

SPECIFICATION.

ENGINE: 85 × 88 mm. = 499 c.c. single cylinder.	*TRANSMISSION: ⅝ × ½ chains in Sunbeam chain cases.*	*TYRES: 26 × 2¾in.*
CARBURETTER: Senspray or Amac.	*GEAR BOX: Three-speed, no kick-starter.*	*FORKS: Druid type.*
MAGNETO: M-L.	*CLUTCH: Hand control.*	*FITTINGS: T.T. bars footrests, narrow front mudguard.*
		WEIGHT: 230 lb.

THAT there is a market for a light and speedy solo mount of medium power is a fact which we have consistently emphasised.

Owing to the ever stiffening requirements of "go-anywhere" reliability trials and the amazing popularity of the sidecar, the ardent soloist, who did so much to develop the motor cycle in its earlier days, has found himself, latterly, almost uncatered for. The old type 180 lb. 500 c.c. "singles," so unfailingly successful in the hands of pre-war competition riders, have almost disappeared; the very efficiency of these machines proved to be their own undoing, since it was soon discovered that the engines were capable of sidecar work under most conditions, and, in consequence, weight and luxury were added, until finally the enthusiastic speed man found his machine overloaded.

Gears Essential To-day.

All the progress of the motor cycle movement has tended toward the use of high speed engines and a greater range of gearing. The earlier school of speed rider achieved his success with the direct belt drive and variable pulley; the modern speed man "lets it rev.," using his gears freely. That the latter method gives better results, especially in road racing, was shown in the last T.T., when direct geared machines were outclassed by similar engines with three-speed gears.

This is the day of the gear box, while chain drive is used almost entirely under high speed or arduous conditions on the majority of medium and high-powered mounts. Given chain drive, gears, and a clutch, the average rider demands a kick-starter, generous weather protection, and luxurious springing. His requirements have given us wide mudguards, underscreens, footboards, spring frames, efficient spring forks, spring seat-pillars, pan saddles, and every refinement associated with the up-to-date machine. His requirements have also given us the modern 500 c.c. mount of about 300 lb. unladen weight.

A small group of riders of the old hard-riding school (they form the backbone of support in club and open speed events) have never failed to look askance at the

Road Tests of New Models.—

ever-growing weight of the 500 c.c. class of machine. To many the charm of riding was in danger of being lost; speed, liveliness, ease of handling, and brisk acceleration were all being sacrificed to the sybaritic latter-day influx into the ranks of motor cyclists who cried "comfort, more comfort, and take a sidecar anywhere."

The trials rider on a sporting Sunbeam will have no difficulty in retaining his seat under the most adverse conditions. Here is a rider negotiating a path of deep loose sand.

Reducing Weight.

Realisation of this state of affairs has been dawning upon the trade for some time, and, in various quarters, a return to lighter specifications for purely solo types is being considered by those concerned.

To the makers of the Sunbeam machines must be awarded the credit for being the first to place on the market a model in which none but the main essentials of the general touring layout have been retained. Refinement and elimination are the keynotes of the new sporting T.T. Sunbeam, which has a specification drawn up to make a special appeal to the lover of medium-weight, medium-powered, sporting models. Taking the standard solo machine as the ground work, the frame has been shortened and lightened, lighter forks have been used, mudguarding is curtailed a little, a lighter gear box with only one sliding member is used, while the kick-starter is omitted, and internal expanding brakes are replaced by those of the dummy belt drum variety. Essentials of the touring model retained are the Sunbeam engine in standard form (except that an aluminium piston is used), and the well-known Sunbeam transmission by chains running in oil bath cases in conjunction with the engine-shaft shock absorber and multi-plate metal clutch controlled from the handle-bar.

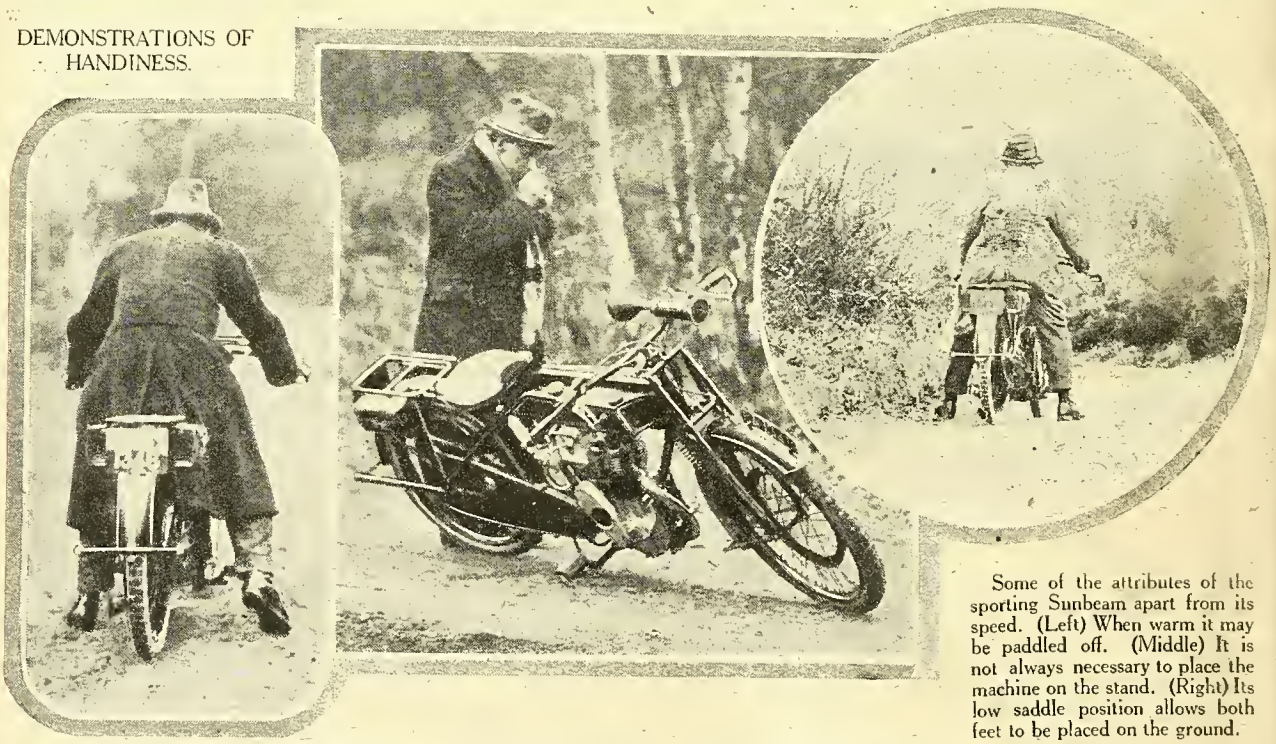
The "Sports" Sunbeam is so unostentatious in operation that it travels faster than the rider realises, and until this is fully appreciated corners are approached more quickly than is wise. The excellent braking and the ease of control generally, however, prevent mishaps through under-estimated speed.

A Certain Liveliness.

Wolverhampton is one of those places from which it is an excellent plan to get away as quickly as possible, so, after taking over a new machine at the works of Messrs. John Marston, Ltd., we lost no time in leaving behind the greasy streets with their vile "stud-contact" tramlines.

Starting the new Sunbeam is easy, for, although its carburetter setting allowed speeds of six to sixty-five miles per hour, a short run and jump was all that was required; had it been tuned for less ambitious speeds a paddle-off under all circumstances would have been possible, but the jump was found easier except on falling grades. Once under way it was found that the riding position was one conducive to safe and easy handling—the wide, flat bars giving great security, while the footrests, immediately under the saddle, bring the rider into the best position for certain control. The clutch is operated by the left-hand as is the front brake, while the exhaust and throttle are on the right — this arrangement is open to a purely personal criticism, and if the machine had been our own the positions of front brake and exhaust would have been reversed at the earliest opportunity. Close to the rider's left foot the brake pedal gives quick and easy control without disturbing the balance or distribution of the rider's weight—an important point on such a really fast mount.

Road Tests of New Models.—

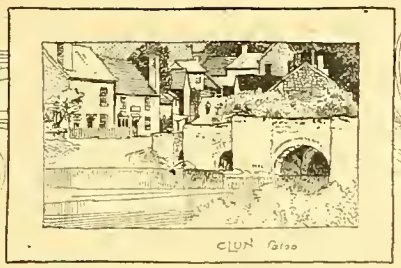


Very easy manipulation of the gears is possible on the new Sunbeam, the changing being silent, certain, and instantaneous, and the control lever is situated in a nearly horizontal position towards the front of the tank. High gear is engaged by pulling up (backward) the lever instead of pushing it forward as on the standard models. The action is easy and natural, and the change from second to top is delightfully easy. This is as it should be, since, on second speed, a considerable speed should be attained before top is snicked home; and the get-away then is astounding.

Our test comprised an afternoon's running in the vicinity of Kinver, near Stourbridge, and the machine was tried on good and bad main roads, on a rough surfaced hill, and on sandy by-lanes. Under all circumstances it proved delightfully tractable, no tendency to skid in grease was noticed, and the speed was all that could be desired. Absence of fuss is an outstanding characteristic of the engine; at 40 m.p.h. there is neither unpleasant noise nor vibration, while the range of gearing permits slow and certain climbing on any surface. Comfort naturally is, perhaps, a little less than on the standard models, since the rather hard semi-racing saddle and short wheelbase tend to pronounce the effects of pot-holed roads. Thanks to the shock absorber, the high top gear (approximately 4.6 to 1) does not cause harshness, and the pick-up is smooth and certain if initial speed is not too low. Judging by the speed on middle gear, however, it would seem that the top ratio might be lowered slightly without seriously affecting the maximum speed, while improving the acceleration from dead slow.

One point which should be mentioned is the provision of arrangements for rear tyre replacement without removing the back wheel. Of course, the interchangeable detachable wheels of the touring model are eliminated on the score of lightness, and a divided rear axle is used. This device was well tried out on pre-war Sunbeams and is simple and convenient.

Altogether, we were agreeably impressed with the sporting Sunbeam; it caters adequately for a definite (if, nowadays, somewhat limited) demand, and its success in so doing, as our test run proved, shows that the end in view has never been allowed to become obscured in the minds of its producers. The rider who requires a mount planned on purely sporting lines, and yet not unsuitable for solo touring or freak hill-climbing, must include the sporting Sunbeam in the first rank of machines produced for his needs.



DEMONSTRATIONS OF HANDINESS.

Some of the attributes of the sporting Sunbeam apart from its speed. (Left) When warm it may be paddled off. (Middle) It is not always necessary to place the machine on the stand. (Right) Its low saddle position allows both feet to be placed on the ground.

SILENCE, MECHANICAL AND EXHAUST.

AN evening stroll from the Marble Arch to Hyde Park Corner is apt to be instructive to the keen motor cyclist. In the comparative quietude of the Park one is able to appreciate the wonderful silence of the strings of automobiles as they glide past. Not many motor cycles pass this way, but the majority of those that do so compare most unfavourably with the cars. On a recent occasion we counted some thirty cars passing over this section, and all were reasonably quiet. Not so the three motor cycles which were encountered on the same journey. None of these three have a reputation for being specially noisy, yet all made considerably more "racket" than the noisiest of the cars. The quietest motor cycle was a 4 h.p. twin, the exhaust of which was reasonably silent, though the valve clatter was audible from a considerable distance. An 8 h.p. sidecar outfit was noisy both mechanically and with regard to the exhaust, while the exhaust noise of a single almost drowned the mechanical noises, but not quite. The popularity of the motor cycle will never reach its zenith until designers pay more attention to silence.

Notes for the Novice.

No. XI.—TYRES.

Hints on Care and Management to Enhance Comfort and Avoid Undue Wear.

THE makers of pneumatic tyres always—or nearly always—advise their customers to keep their tyres blown up hard. This is good advice, especially from the point of view of economy, for a hard tyre will wear better than one which is insufficiently inflated, because there is less bending of the walls of the tyre at the sides and near the bead.

A tyre which fits its rim correctly but is under-inflated.

A tyre should be so inflated that it does not give appreciably when running on a smooth road; if it does, the wall will be continually bending, and this will cause both heat and wear. It should not, however, be so hard that it will pass over a stone or other obstruction without any flexion, as, if this be the case, a large amount of the advantages of a pneumatic tyre will be lost, and there will be practically no gain in comfort.

The happy medium is to inflate the tyre in such a manner that it shall give way slightly before the occasional obstruction, and, by partly absorbing it into itself, reduce the shocks that would otherwise be felt by the entire machine and rider; but, on the other hand, it should not be constantly bending, and thus using up engine power to its own disadvantage.

Road Shocks.

A fairly good test is to see that the tyres do not flatten out more than very slightly when the rider is seated on the machine. This, of course, means that the back tyre must be somewhat harder than the front, as it has more weight to carry, as well as more work to do. A very hard front tyre can be the source of considerable discomfort, even when the spring forks are fairly good ones.

It is desirable from a theoretical point of view to intercept all road shocks before they meet the wheels of the machine, to be by them transferred to the machine, and, finally, to the rider. This is, unfortunately, not always possible, but much may be done by the use of large tyres judiciously inflated. However, it must not be expected that the tyres can damp out the larger shocks caused by bad pot-holes or absorb the unpleasant waves which are found in some Tarmac roads. These are due to the weakness of the road foundations and their consequent destruction by the heavier class of motor vehicles. Often the surface itself remains intact and dip is formed—not a pot-hole, which is due to a breaking away of the surface of the road—then a heavy vehicle passing over this dip is caused to bounce on its springs, and so other dips are formed on each side of the first, if it be so placed as to encounter the traffic in both directions.

An example of under-inflation; the solid line shows where the ground line often is, the dotted line where it should be.

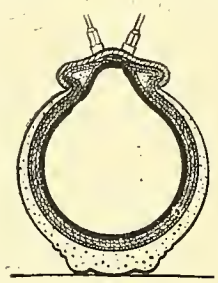
To damp out the jolts caused by such obstruction the tyres would have to be very large, and to be run in a very soft condition, and this, in addition to the other disadvantage previously mentioned, would give them a great and unpleasant tendency to roll.

Tyre and rim ill-matched.

Rolling.

Some tyres are said to have this tendency more than others, but I am inclined to the opinion that rolling is due rather to under-inflation, or to fitting a tyre which is large in section on a narrow rim, as, for example, a 3in. tyre on a 2¼in. rim. It will not then have sufficient support at its base, and its lateral rigidity will be wanting—in other words, it will roll.

The exception to the above opinion will, I think, be the case of a tyre with a narrow but outstanding tread. A tyre of this shape will have less support from the ground and will be inclined to bend near the projecting tread much in the same way as a tyre on a too narrow rim bends unduly near the bead with a similar result in each case, *i.e.*, a lack of lateral rigidity and a tendency to roll unless blown up very hard.



Many years ago I had a tyre on a pedal cycle with a single rib about five-eighths of an inch wide in the centre of the tread. This was one of the earliest—if not *the* earliest—attempts at a non-skidding pneumatic tyre (it came very soon after the idea of solutioning a strip of webbing along the tread), but it was not altogether a success, for it soon cracked where the tread joined the tyre and became useless.

Punctures.

Unfortunately, the care of pneumatic tyres does not consist only in using them in a proper manner and keeping them properly inflated, though the latter is 99% of the battle, and now we come to the point where the maintaining of the tyre in such a condition that it can be inflated at all must be considered. As will be shown, a little care should avoid much potential trouble.

Notes for the Novice.

Briefly, the inner tube of a pneumatic tyre may lose the power of retaining the air which is pumped into it in six ways: (1) it may be punctured or cut from the outside of the tyre by a nail, thorn, or piece of glass, to name only the three puncturing implements which are most common; (2) it may be chafed through by a roughness inside the cover; (3) a defect in the tube may develop into a tiny hole (I once had a tube that had many hairs running through the rubber and all leaked in time); (4) an imperfect joining of the two ends when the tube is made up; (5) an insufficiently screwed up valve seating; and (6) a leak in the valve itself.

A tyre which is insufficiently supported by the rim, and has too narrow a tread.

Test the Valve First!

Of these No. 1 is the genuine puncture or cut, does the most damage, and is the most trouble to repair, for the outer cover needs attention as well as the inner tube—in fact, a sufficiently bad cut may mean that the cover must go to the makers for treatment, or it may even have to be scrapped. Nos. 2, 3, and 4, internal defects, are the most difficult to locate, for sometimes the holes are very small and can be discovered only with the help of a pail of water. No. 5 also may easily escape detection, but both it and No. 6 can generally be put right without difficulty. It is a good rule when a tyre is found to be leaky, and the cause is not an obvious puncture, to commence operations by testing the valve. This is easily and quickly done, and may possibly result in saving the trouble of removing the tyre; therefore, it is always worth trying.

It is very irritating after removing the cover and expending half an hour or so in the vain search for a puncture by immersing the tube in water, which must be wiped off again, to find that all this trouble might have been avoided, and the tyre made fit for use again in a couple of minutes by the simple expedient of replacing the valve rubber. Sometimes, especially if the tyre has not been removed for some little time, it will be found that the inner part of a valve does not readily come away from the main body. This will be because the valve rubber has stuck. In this case it is inadvisable to pull the inner part out by main force, as this may spoil a good valve rubber, or, worse still—if spares are to hand—leave the valve tube sticking inside the valve, whence it is difficult to dislodge it.

The tyre of a motor cycle attached to a sidecar and leaning inwards causes uneven wear.

The proper procedure is to warm the valve with a lighted match, when, in nearly every case, the inside part, including the valve rubber, will be at once released and come away entire.

To test a valve the wheel should be turned until the valve is at the top, when it can be immersed in a wine glass or test tube full of water. This will show whether the leak is past the rubber or through the smaller tube to which the inflator is attached. Away from home, where a wine glass is not available, the latter point can be tested by moistening the finger and placing it for a moment on the end of the valve, when slowly issuing bubbles will reveal a leak, and the latter can generally be discovered by an examination of the valve rubber. In fact, the whole thing can be done in less time than it takes to read these lines.

Punctures when found are not difficult to mend, especially if the prepared patches, first introduced, I believe, by the "Patchquick" people, are used. These patches are often covered on the prepared side of a piece of paper or canvas which does not adhere tightly, and when this is taken off the patch can be at once applied to the tube after the latter has been properly treated if one is in a hurry, though it is better when there is time to apply a coat of solution to the patch as generally directed in the instructions, but the solution must dry before the patch is placed in position, if a good joint is to be made. Therefore, when time is an object, I should always prefer to apply the patch without a coat of solution, than to attempt to make a joint before the solution was sufficiently dry.

When a nail has been the puncturing instrument, it very often happens—in fact, more often than not—that quite a large number of small holes will be found on the side of the tube next to the rim, a fresh one being made at every revolution of the wheel until the machine is brought to rest. A careful examination should always be made with the object of discovering these holes, if any exist, and they can generally be covered by a single patch of large size.

Remove the Culprit.

Care should be taken, too, that the cause of the puncture is removed from the outer cover. Cases have occurred when a thorn or nail in the tyre has escaped notice, and as soon as the tube has been inflated a second puncture has been made. This is a very irritating experience, for it means that the tyre must be taken off again, and the outfit made use of a second time. Words are apt to fail a rider on such an occasion, unless he be blessed—or cursed—with a very fluent vocabulary.

When tyres are being mended the outer cover should not be forgotten. Many covers are made of compressed rubber, and automatically close up small holes, but a little solution or tyre putty will help to make sure that the hole is stopped, and that water will not make its way through and rot the canvas lining, thus causing a burst. The Shaler vulcanisers are also very handy for this purpose as well as for the repair of tubes. A canvas patch on the inside of the cover is sometimes a wise precaution, and should never be omitted if the lining is at all cut or frayed.

The tyre shown above when rolling.

Security Bolts.

If the outer cover is not a tight fit on the rim, it is desirable to fit security bolts, one, two, or three in number, according to circumstances, spaced equally

Notes for the Novice.—

round the rim, counting the valve as one. Thus, if one bolt is sufficient it will be opposite the valve: if two are used, they will be on each side of the valve at angles of 120°, and so on. These are wanted not so much to hold the tyre on the rim when fully inflated as to retain it in position when a puncture occurs, as it then may happen that the cover is dragged round the wheel, pulling the inner tube with it, and so tearing the valve from its seating before the machine can be brought to a standstill.

Security bolts make it rather more difficult to detach and replace a tyre, but this is hardly worth consideration. Care must be taken not to nip the tube between the flanges of the bolt and the cover. It will be found that the tube will slip more easily into position if it be rubbed over with French chalk before being put into the cover, and a little chalk should be put into the cover itself after all grit and dirt, which may very readily fall in from the wheel, has been brushed away. The chalk may be rubbed on with the fingers: it will help to prevent the inner tube from chafing or from sticking to the outer cover. The valve tube should also be treated in the same way: it will then be found to slip very easily into position and be less inclined to stick in the valve.

Rim Sections.

When purchasing new tyres it is always advisable to specify the rims to which they are to be fitted, or, failing this, an exact description of the old tyres. Now that rims and tyres are standardised, it is easy to obtain a good fit. Most motor cycles are equipped with rims of section D (1, 2, and 3), but some of the larger machines have round base rims known as section CC or section 65 mm., and tyres made for these cannot be used on section D and *vice versa*, for the beads are shaped differently.

Sidecar Tyres.

One thing more, if tyres are to give satisfactory service on sidecar outfits, great attention must be given to the correct alignment of the sidecar, otherwise there will be a continual dragging of the tyre sideways on the road, which will cause very rapid wear of the treads. It is very common to sidecar outfits on the road where the motor cycle is leaning over towards the sidecar in a most loving or confidential manner. This, again, is most unfair to the tyres, especially when, as is often the case, this fault is combined with under-inflation, for it causes excessive wear on one side of the tread, and excessive strain on the tyre walls on the same side. Oil has a harmful effect on rubber, therefore if any oil does happen to get on the tyres (it may run down a spoke from the hub if the latter has been over-oiled) it should be wiped off at once, and oil should not be allowed to lie about in puddles on the garage floor.

The First Sidecar.

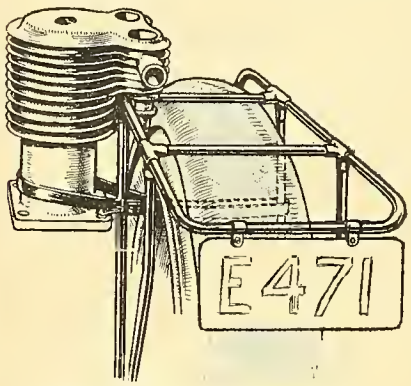
Claimants to the Honour of Suggestion, Invention, and Manufacture.

IT is often very difficult to trace the originator of an invention, especially an invention of the nature of a motor vehicle, but there appears no doubt that Mr. W. J. Graham, of 56, Church Street, Enfield, London, N., was the first man to patent a sidecar attachment. The writer is able to say that he rode in the machine, shortly afterwards purchasing one made under licence by Components, Ltd., an attachment which was run successfully with a 2¾ h.p. Ormonde throughout the summer of 1903.

Plan of the Graham sidecar chassis patented in 1903.

The design of the original chassis shows that there is very little difference between this and the modern sidecar. The first Graham sidecar was devised in 1902, provisionally protected on January 21st, 1903, and the rights of the invention were sold to Components, Ltd., Birmingham, on March 22nd, 1904. Needless to say, this sidecar was known as the "Liberty." The original Graham sidecar came into prominence on the occasion of the first Stock Exchange walk to Brighton, and was attached to a 3½ h.p. Minerva.

THE FIRST SIDECAR.
Attached to a 1903 Minerva, the Graham sidecar was accorded its earliest publicity on the occasion of the first Stock Exchange walk to Brighton.



Mr. W. J. Graham must be indeed proud of his invention, which was to some extent suggested by a drawing by a humorous artist, and which has affected the motor cycle industry to a degree second only to the magneto and the pneumatic tyre.

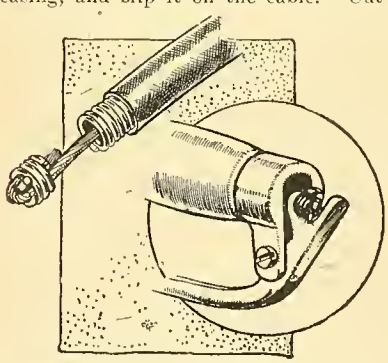
IDEAS: Useful and Ingenious.

Holding the Cylinder for Valve Grinding.

THE sketch shows a way in which I improvised a device for holding the cylinder of my 4 h.p. Triumph when grinding in valves.—T.A.S.



Holding down the cylinder when valve-grinding.

An Excellent Emergency Bowden Nipple.

A SUBSTITUTE for the soldered nipple can be made up in ten minutes, with nothing but a pair of pliers and a bit of copper wire.

First shorten the casing by an inch, or as much as is necessary to get enough exposed cable to work on. Then cut off a length of about three coils of the casing, and slip it on the cable. Cut a

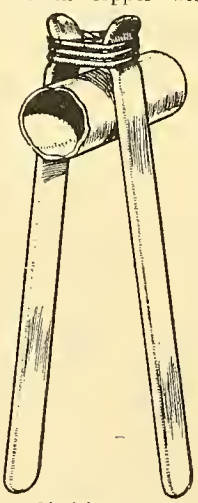
An improvised Bowden wire nipple that may prove stronger than the soldered article.

piece of copper or other wire about $\frac{1}{8}$in. long. Double back the end of the cable, place the bit of wire in the fold, and wedge the three coils of casing over the turned back cable end. This results in a "stop" equal to a soldered nipple, and more durable. The cable does *not* snap off when doubled back, if carefully done.—A.G.B.

[Will the sender of the above please forward his present address?—Ed.]

A Control Lever Tip.

THE rubber of a fount-pen filler, fitted as shown in sketch over a wrapping of insulating tape, makes an efficient substitute for a missing con-



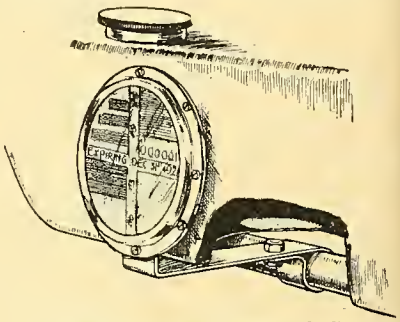
For broken control lever tips—a fount-pen filler and some insulation taps.

trol lever tip. It may also be advantageously used on the whole control if a surer grip be desired.—J.G.C.

Improvised Grips.

IN an emergency a pair of grips can be made up in a moment as illustrated. A pair of tyre levers, as shown, are bound round with a piece of thickish copper wire, or even string, taking care that they are tied, more or less, to suit the job. By this means a big and sure leverage is secured, and the job can be firmly held or twisted, as the case may be.—G.R.V.

Useful grips may be improvised from a pair of tyre levers and some copper wire.



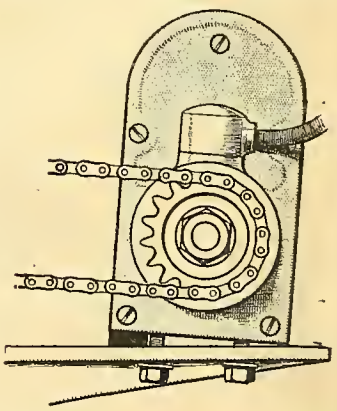
Vinegar—not Salt.

HAVING occasion lately to overhaul my machine, I had great difficulty in removing the flywheel from the engine. I spent some hours at it, and tried every possible method, but all my efforts were entirely useless. I remembered an old tip some days later, and as it has been successful I have no doubt it may be of assistance to others in a similar predicament.

I made a little cup of plasticine round the spindle, filled it with vinegar, and left it for a few hours, and on trying later the flywheel came away with the minimum of effort. I have since tried this on various articles, such as rusted bolts and nuts, screws, etc., and have never yet found it fail to act.—H.A.McQ.

One of Many.

THE holder itself was made from a lever pattern tin lid; and a piece of photographic film was washed clear and used as a covering, a rubber washer being placed between the licence and the film. It was found unnecessary to fit one between the lid and the back.



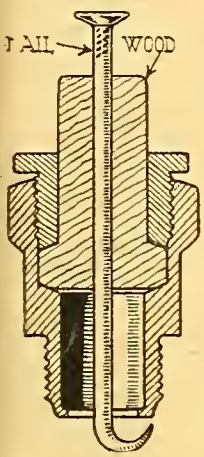
An unobtrusive and easily made licence holder. The clip-nut is soldered to the arm.

It is clipped to the middle tube of the frame, and the arm should be made so that it allows the holder to be about $\frac{1}{16}$in. from the side of the tank. The clip nut may be soldered to the strip.—R.C.

Magneto Chain Adjustment.

WHEN the full adjustment of the magneto driving-chain has been taken up, the correct thing to do is to take a link out. It is common to find, however, that on doing so the chain

An exaggerated view of a quite effective way of tightening the magneto chain when the limit of adjustment has been reached.



is too short. By inserting a packing piece (as shown in an exaggerated form) under one side of the magneto, and so tilting it, it is possible to increase slightly the range of adjustment.—G.M.

SANS SPARKING PLUG.

WE have received two ingenious solutions to the seemingly insuperable problem of "getting home" when the sparking plug has given out.

The first suggests requisitioning the rear brake block and shaping it to a slightly taper fit in the sparking plug hole. Then a long screw or nail is driven longitudinally through it, and bent over at the thicker end, so that when the improvised plug is fitted securely from the *inside* of the valve cap the correct sparking gap is obtained. It is claimed that the cylinder pressure will only tend to drive it further home. But we should imagine that this would be a very tedious task.

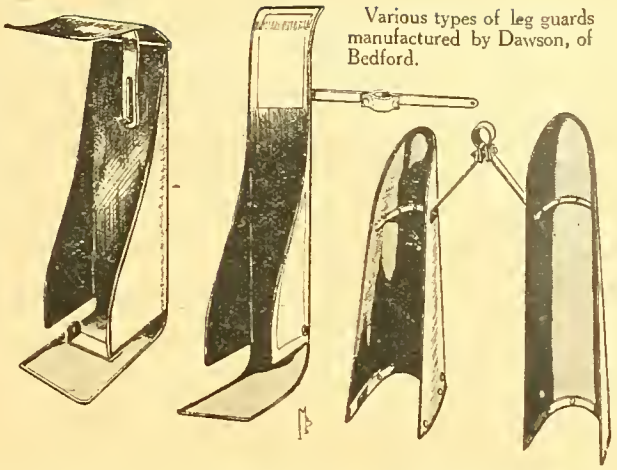
So, too, would the second idea, which we illustrate, although perhaps not to so great an extent. This suggestion depends on the disabled plug being of the detachable type; and a shaped piece of wood, which must be dry, with a shoulder to take the pressure, provides the insulation in this case. Obviously the nail is driven in after assembly; otherwise the illustration is self-explanatory.

A nail in lieu of an electrode and wood to replace the insulator.

AUXILIARY MUDGUARDING.

EVERY year sees a large increase in the use of the motor cycle by professional men who ride their motor cycles every day, whatever the weather may be.

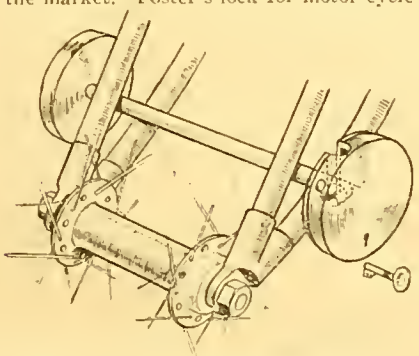
These readers, particularly, will naturally be interested in any device designed to protect the rider and keep him clean during this time of year when the roads are usually muddy.



An undershield designed to protect the engine and gear box.

The question of mudguarding has been carefully studied by Mr. N. Dawson, 34, Ampthill Road, Bedford, who lately submitted to us several samples of various types of mudshields. One type consists of shields for protecting the rider's legs, held in position by a stay clipped to the secondary tube of the frame at the top and at the bottom by the footrests rod, which passes through a half-inch hole in each of the shields secured by a nut on the footrest rod.

A second pattern has a straight rod through the centre of the shield at the top fixed to the down tube, and a flap which comes over the knees. It is provided with a suitable means of adjustment by means of a butterfly nut, while the bottom has a small bracket with the shielded footrest lying in between and the rod passing straight through, while the outside nut tightens the whole securely.



A third pattern is fixed in the same manner as the type of shield just described, but it has no adjustable flap.

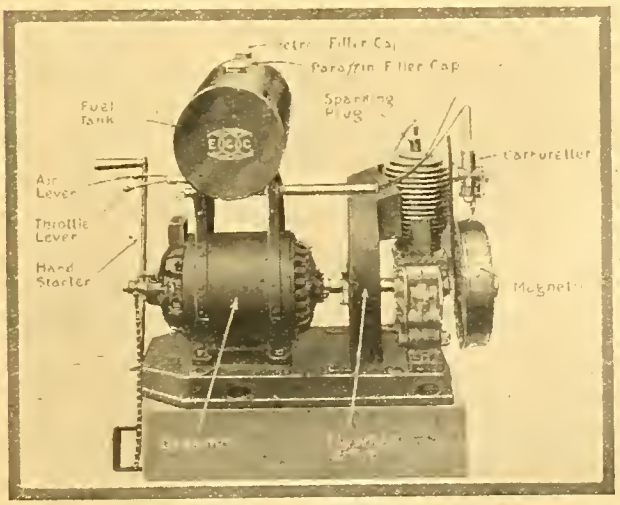
Various types of leg guards manufactured by Dawson, of Bedford.

FRONT WHEEL LOCKING.

OF recent years the exploits of the motor thief have ever been on the increase, both in number and in audacity, and it is not surprising that many locking devices are appearing on the market. Foster's lock for motor cycle wheels consists, as may be seen, of two discs at the end of a rod of suitable length, one of these discs being pivoted diametrically to allow the device to be inserted between the front fork girder tubes. When in position this disc is turned back at right angles to the rod and held there by a spring lock. In the position shown it may only be released again by the key.

Foster's wheel lock in position in front forks.

HOUSE LIGHTING BY MOTOR CYCLE ENGINE.



OUR queries department frequently deals with readers' enquiries respecting electric, petrol gas, and acetylene lighting plants, showing that living in the country presents problems to motor cyclists other than those that may be overcome by motor cycle.

In the lighting set illustrated, however, the power plant consists of a Villiers two-stroke engine with flywheel magneto, mounted on a bed plate with blower fan, dynamo, and petrol and paraffin tank.

This set is made by the Electrical Construction Co., Ltd., of Wolverhampton, and has an output of 500 watts, the battery capacity being 60 amp. hours at 25 volts.

Taking a 15 watt lamp (the half watt type gives greater candle power) as a standard, the accumulator will provide current for ten such lamps for ten hours, or five lamps for twenty hours; so assuming the requirements of the average small country house to be the equivalent of five lamps continuously burning for six hours per day, it is only necessary to charge the battery twice per week. After two minutes' running on petrol, paraffin may be used.

Of the two pole type, the dynamo is shunt wound, running on ball bearings and giving ½ k.w. 25-35 volts continuously at 1,250-1,350 r.p.m. A very complete equipment, including a slate switchboard with automatic cut-in and cut-out, is supplied with the set, which costs £115.

E.C.C. small house lighting plant which utilises a Villiers two-stroke engine.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

1921 ARBUTHNOT TROPHY TRIAL.

Sir,—I find that I made an error in the letter, which you published on February 2nd, on the subject of next year's Arbuthnot Trophy trial. I intended to suggest that the 1921 trial should be open to officers and men of the Royal Navy, Royal Marines, Army, and Royal Air Force. In the typewritten copy I unwittingly omitted to mention the Army.

W. S. JAMESON, Lt. R.N.

WHO ORIGINATED DISC WHEELS?

Sir,—Replying to the letter written by Mr. Chas. Daunton-Shaw, and published in *The Motor Cycle* of February 3rd, on "Who Originated Disc Wheels?" I believe that the first wheel of this description was invented by my father and introduced on a racing pedal cycle called the "Dorset Flyer," made by the Shaftesbury Cycle Co., of Shaftesbury, Dorset, about 1893. Being only a lad at the time I cannot recall the details of its construction, but as far as I know this was the first disc wheel made.

S. J. SMITH.

IN TROUBLOUS IRELAND.

Sir,—I notice that motor cyclists across the "pond" are worrying about the new taxation. Why should they worry? When they realise the position of Irish motor cyclists, they will probably cheer up and say "it must be done," and pay their *very fair* tax.

At present twenty miles is our limit; permits to have, to use, etc., with photographs, description, age, height, etc., and searches almost hourly. We do not grumble. We have to pay the tax also, but would pay anything to have the "open road" again for the coming summer.

Dublin. ONE OF THE MANY THOUSANDS.

SPLITTING TWO GALLONS.

Sir,—We notice in your issue of January 27th, under the heading of "Occasional Comments," a short paragraph entitled "Splitting Two Gallons."

The difficulties put forward by your correspondent would certainly not arise under the bulk storage and kerb pump system, as any amount from half a gallon upwards can be delivered from the pump with absolute accuracy. We think your correspondent's remark another point strongly in favour of the universal adoption of bulk storage. The utility of being able to draw a small quantity of petrol is apparent, having regard to the enormous numbers of light cars and motor cycles whose tank accommodation is small.

ANGLO-AMERICAN OIL CO., LTD.,
H. G. E. Greville, Publicity Manager.

Sir,—Referring to the remarks of your esteemed contributor "Ixion" in *The Motor Cycle* of January 27th, I quite agree that the question of whether a garage proprietor will "split" a can of petrol and supply one gallon or a less quantity is often an important one to the motor cyclist.

In this connection I would point out that one of the questions invariably put to garage proprietors who apply for the Auto-Cycle Union's official appointment is as to whether they will supply less than two gallons of petrol to the Union's members. There is great reluctance to appoint any garage where only complete cans of petrol are sold, but your readers will be glad to know that over 90% of the A.C.U. official garages and repairers do supply less than two gallons if required.

T. W. LOUGHBOROUGH,
Secretary, Auto Cycle Union.

PETROILING HINTS.

Sir,—While reading through "Occasional Comments," by "Ixion," in your issue of February 3rd, I was much interested in his remarks regarding "Petroiling a Scott."

I use for business purposes a Connaught lightweight sidecar outfit, which, as you know, has a petroil system of lubrication. The tank cap has a leather washer and a small hole in the centre of about 26ths for the purpose of an air vent. In addition to this, there is a metal anti-splash device fitted, which reaches to the bottom of the tank. Thus it is practically impossible for oil to leak round about the petrol cap. As long as nuts and unions are kept perfectly tight, I never find the least sign of any messiness. With regard to the carburetter, as long as one does not flood excessively, no leakage of any consequence occurs in that quarter. In my opinion, the petroil system is absolutely the best solution for lubrication troubles.

As a matter of fact, I understand that the majority of competition riders always add a little oil to their petrol, even on four-stroke machines.

S. T. ASHBY.

GETTING OUT OF LONDON.

Sir,—I should like to warn readers riding through London or leaving by the north, to avoid the fearful road between Edgware and Cricklewood. The surface is worse than any I encountered in a 1,200 mile tour in Devon and Cornwall. The narrow passage by the side of the car lines is rutted and "pot-holed," the lines in many places inches above the adjoining surface, and between the lines themselves blocks are out, and the track is more fit for a chamois than a motor cyclist. (Yet the L.C.C. is inflicting more miles of tramlines on us!) Riding solo on the evening of February 6th, I had three spills between the points named and another in Edgware Road.

The state of the several main roads leaving London by the north reflects discredit on the authorities concerned; the lead to the Great North Road until one reaches Barnet is a succession of leaps and bounds, and the Hampstead Road is notorious.

Can anyone tell me how to reach the pretty country and fine roads in Bedfordshire, Herts, and Buckingham on an average London Sunday without serious risk of life and limb?

R. W. WATT.

GOOD WORK ON AN OLD MINIATURE.

Sir,—In reply to Mr. M. J. Wright's letter which appeared in *The Motor Cycle* of February 3rd, I would like to mention that I purchased second-hand a little 2 h.p. scooter in June, 1913, which had done about 2,000 miles, but was in the pink of condition when I took it over. From that day until I joined up, I can safely say I rode it over another 2,500 miles. This little machine has a speed that can hardly be conceived by anyone until he crosses swords with me on the road. As a matter of fact, the only thing I fear on two wheels is the Norton (one of which I also possess).

I came home on a ten days' leave in 1918, and did not stop until I had knocked the scooter's record up another 1,500 miles. I am firmly convinced the machine is even better now than when it came out of the factory. I was "demobbed" in February, 1919, and have run about on it continually.

I would like to say, in conclusion, that this has been the most economical 'bus I ever possessed. My only replacement has been one back cover.

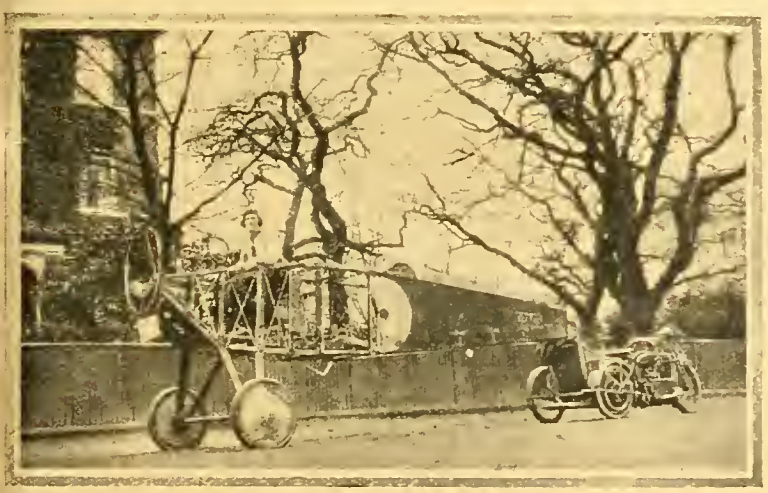
DONALD CAMERON.

TIME IS MONEY.

Sir,—*The Motor Cycle* has published several letters giving comparative costs and the saving effected by using a motor cycle instead of the train, but your correspondents do not appear to have considered that the "time" saved is in itself a very considerable item.

My own case may be of interest. I have to journey daily from Kingston-on-Thames to Cricklewood, a distance of fourteen miles each way. By public conveyances, I have to use two trains, a 'bus and a tram each way! and never manage the journey under one and a half hours; it is usually two to two and a quarter hours. On my machine I do the journey, in all weathers, in from forty to fifty minutes, according to the state of the roads and traffic.

Excluding Sundays, holidays, and special occasions, when I have had to go by train, I have made about 250 return journeys in the past twelve months.



A very low estimate of the time saved is one hour each way, or two hours per day. 250 × 2 = 500 hours. Deduct, say, 25% to represent time spent in cleaning, repairing, and tuning up, and this leaves 375 hours, or more than a month of working days of twelve hours each! Surely an item worth taking into consideration in the course of a year.

H. A. CHAPLIN.

CRUELTY TO SIDECARS.

Sir,—I read with interest a letter published in your issue of February 3rd under this heading.

My 'bus—a 6 h.p. New Hudson—towed a single-seater aeroplane fuselage a distance of seven miles, chiefly through traffic. We got on to top gear easily and attained a speed of 25 m.p.h. The machine took a long trying gradient very easily on second gear; till, the engine beginning to labour, I looked round, and found several small boys having a free ride.

A big haul for a sidecar, but not so heavy as it looks. (See letter from Mr. J. Spalding.)

I wonder if your readers know of the bargains that may be picked up at certain aerodromes. I obtained the above-mentioned fuselage complete (less engine) for 10s. There are two 700×75 tyres on it, some hundreds of nuts and bolts, and innumerable other useful fittings, not to mention the wood. There were about fifty of these machines for sale at the same price.

J. SPALDING.

NEW HINTS FOR AN OLD ENGINE.

Sir,—Referring to Mr. Norman H. Mills's letter in your issue of February 3rd, *re* 2¾ h.p. De Dion engine, may I, as one of the users of this type for many years, offer the following suggestions:

Before attempting to tune the engine, carefully examine the exhaust valve seating for cracks. Make certain that both push rod and exhaust valve stem are a perfect fit, as being direct lift by the cam, any play causes great variation in timing. Fit a fairly strong exhaust valve spring, with as little clearance between the tappet as possible when hot. The inlet valve requires very close attention, and must have perfectly flat faces, and any suspicion of roundness should be removed in the lathe. The stem must be a good working fit, with no side play, and the lift must not exceed $\frac{3}{32}$in. The spring should be just weak enough for the engine to suck when turned by hand, which will show itself by a species of grunt in the inlet pipe.

As these engines are well balanced, and will rev. freely, the gear should be kept somewhat on the low side, to ensure good climbing. Use a plug with heavy electrodes, as it is not uncommon for these engines to show a dull red combustion chamber when riding at night. Fit as large an exhaust pipe as possible, it being advisable to increase the bore into the port, and avoid using thick piping with a view to eliminating the storage of heat round the cylinder head.

If Mr. Mills cares to follow these points, assuring himself, of course, that the engine is mechanically good regarding bearings, cylinder bore, and piston rings, etc., he will find that he has an engine that can show a clean pair of heels to many modern machines.

W. S. LEECH.

CHERISH YOUR LICENCE.

Sir,—I wish to draw the attention of your readers to the trouble and expense incurred in obtaining a new taxation licence in place of one lost.

I had the misfortune to lose mine in Maida Vale on February 2nd, 1921, the same day as it was issued me. My machine is a 1920 Indian with sidecar, and the licence, in its holder was fixed to the rear of the front number plate. Apparently, not enough clearance was allowed and it was pushed off, by the action of the front forks.

I applied next morning for another and was told that a Statutory Declaration from a Commissioner of Oaths, a declaration from myself, and a re-issue payment of 5s. would be required before they could consider the matter of issuing me another.

The Statutory declaration costing me 10s. 6d., the L.C.C. re-issue fee 5s., a new licence holder 5s., about six hours of my time, and the prospect of waiting a week or two, make me take this opportunity of warning other motor cyclists to look to the fixings of their licence holders.

I might add that a small "Teddy Bear" mascot was wired to the blank side of the holder. I leave it to you, to consider whether the "blank" mascot brought me any luck.

W. THORPE.

MORE DOG CATCHING.

Sir,—In reply to your correspondent, the Rev. J. M. Philpott, will you please find space for the following truthful account:

Some months ago, whilst proceeding along the King's (somewhat bumpy) highway, ruminating on the possibilities of one day becoming an aviator, I noticed a dog evincing a lively interest in the 24in. wheels of my New Hudson two-stroke. My mind was just wandering back to the thought that one day I might do a spinning nose dive, when the front wheel suddenly jammed solid, and, as a consequence, I executed a graceful curve over the handle-bars. I arose immediately, and with the help of the crowd which had already collected, placed the machine on the stand and looked for the damage. Whilst meditating on the purpose of the remark of a local committee candidate, that "he was not going nearly as fast as he usually does," I noticed a shower of mud and a noise like a steam whistle coming apparently from the front mudguard. Shortly afterwards a dog emerged similar in appearance to the one I had seen before, but rather thinner and longer, and a bit naked in places, which ran up the street, taking the steam siren effect with it, but misfiring slightly on one cylinder.

C. T. WORSELL.

Sir,—A few months ago, I had a similar experience to that of the Rev. J. M. Philpott. The dog, a White West Highland terrier, ran at my machine in the usual manner, lost his head, crouched down, and disappeared between the (B.S.A.) motor cycle and sidecar. I heard him yelp, and as I was going very slowly, I pulled up within a yard or two. On wheeling the outfit backward, I found the belt had trapped the dog's hair and had carried him round with it.

VINCENT H. SUGDEN.

MORE DOG CATCHING.

Sir,—I was interested in reading of the Rev. J. M. Philpott's dog-catching feat in the issue of *The Motor Cycle* for February 3rd; but, strange as it was, I do not think it so curious as the following extraordinary "accident" which happened a few months ago (I forget the exact date, but the incident was reported at the time in the *Bucks Advertiser*). A motor cyclist was riding from Aylesbury to Leighton Buzzard, and, upon approaching the latter town, which is by way of a long steep decline with level railway crossing at the bottom, he met the gates closed and train approaching. Unable to pull up, he crashed into the gates, as the engine came abreast of them. His motor cycle was utterly destroyed, but—and this is the extraordinary part of the business—the rider was thrown, and landed unhurt on the knees of the engine driver on the footplate of the "cab." As the newspaper remarked at the time, what a film stunt it would have made!

May I say that while I have given up my motor cycle for a cycle car, I am unable to give up *The Motor Cycle?*

M. C. MILLBURN.

Sir,—I read with interest the Rev. J. M. Philpott's letter in your issue of February 3rd, and offer the following solution, which may (or may not) be correct:

He had been enjoying a "blind" for some miles, and the resultant heat rendered the tread of his tyres tacky, with the result that when he ran over a dog it became amalgamated with the rubber, and was carried round, until brought to rest by the back stays.

Speaking more seriously, though, the writer some years ago had the following experience:

Whilst driving a small three-wheel runabout, which had the engine situated somewhat like the Morgan, a dog running across the road failed to accelerate quickly enough, and vanished underneath; but, strange to say, no bump was felt, nor did the animal reappear from the back of the machine. A hasty stop was made, and when a frantic yelping commenced underneath the bonnet, investigation showed that the dog was sitting in a pool of oil and water in the canvas underscreen beneath the engine, and, in fact, refused to budge until the underscreen was unstrapped, when it shot away apparently unhurt.

E. B. LEECH.

SIDECAR WHEEL BRAKES.

Sir,—Being a rider of a Rover sidecar outfit having a sidecar wheel brake (of the external band type), my impressions may be of interest. You are probably aware that the sidecar brake works in conjunction with the back wheel brake, and is actuated by the same pedal. As the two brakes are compensated (which I think is the most important point in the design), I have found every satisfaction in their working. On descending a hill with snow on the ground I have applied the brakes until both wheels were locked. The whole outfit tended to slide in a straight path, and I did not notice any ill effects on the steering. Unfortunately, I cannot really say what difference there would be with the sidecar brake put out of action, as I have not made a test under the above road conditions, but I should say that the outfit might possibly tend to keep to a straighter path with both wheels locked than with only the back wheel locked. I keep my brake rods adjusted so that the back wheel shoe commences to act just before the sidecar brake band, as I think this prevents any tendency of the sidecar wheel to act as a pivot on which to swing the cycle round, although I have never experienced that tendency. Speaking generally, I should not recommend sidecar brakes that were made to act independently of the back wheel brake (especially passenger operated); but where the two brakes are fitted through compensating rods to the same pedal (operated by the driver) I think the even braking effect on the road of both wheels is an asset to any outfit.

I have no interest in the Rover Co., except as a satisfied owner of a 1914 machine. A.G.

Beeston.

Sir,—Your remarks *re* sidecar wheel brakes reopen an old controversy. We entirely agree with you that sidecar wheel brakes when operated independently are very dangerous. When we first introduced our B.S.A. taxi outfit we were faced with the necessity of providing, in addition to the powerful internal expanding brake fitted to the machine, a second independent means of stopping and holding a heavy outfit when fully loaded under all conditions.

We realised at once the unsuitability of the front wheel brake as, if made powerful enough for this purpose, it would be extremely dangerous in operation if the surface of the road were at all greasy, particularly in descending a hill, having in mind the distance of the unbraked and heavily loaded sidecar wheel from the rear wheel, as compared with the length of the wheelbase of the machine.

In addition, the action of a front wheel brake throws an undesirable strain upon the steering column and forks in a direction contrary to that for which they are designed. At the same time, the attachment of another brake to the back wheel we considered to be undesirable, for we found, in the event of a sudden "pull up" being necessary, the braking friction of one tyre only was insufficient before locking of the wheel resulted and consequent heavy wear of the rear tyre.

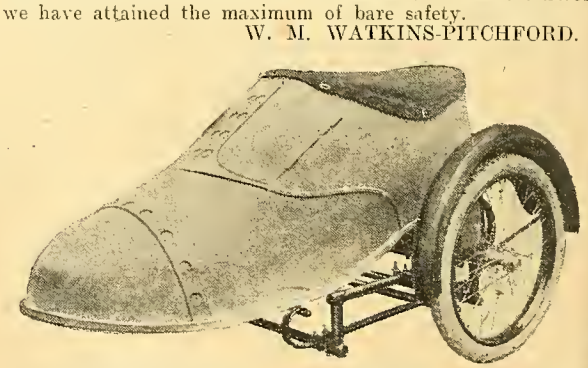
We therefore designed the "County" combined and compensated rear wheel and sidecar wheel brakes (patent applied for), which we have fitted to a considerable number of motor cycle taxis which are now plying for hire in various towns.

This brake is capable of arresting the progress of and holding our taxi under all conditions, and, contrary to your surmise, it has a steadying effect upon the steering. This is particularly noticeable in grease, when it can be applied to its fullest extent without causing the outfit to slew round.

THE COUNTY CYCLE AND MOTOR CO.,
FAWKENER BIRCH, Manager.

A FRONT FORK WEAKNESS.

Sir,—May I warn fellow motor cyclists of a danger which they may perhaps have overlooked? I have for some years past ridden a well-known make of cycle, in which I learned to put absolute confidence, and which I thought I knew inside out. Two years ago I had a bad accident with it, which I attributed to cornering at too high a speed, though the explanation never satisfied me. But about two months since, when free-wheeling at a moderate pace, I saw the bolt head of the fulcrum link of the spring forks suddenly shear off, and when I regained consciousness I found my passenger insensible and badly injured.



The two accidents have involved about twelve weeks' illness and nearly £100 in expenses, so that the matter is sufficiently serious to warn other riders to look to this point in their mounts, since it involves irremediable wreck if it gives way.

In the case of the machine in question, the bolt was of small section, unprotected by a sleeve, lubricated by an inefficient arrangement, and subjected to a constant shearing strain against a sharply faced bearing. Add the twist of the sidecar and the unCushioned punch of the road, and it is no wonder that the bolt had crystallised and parted.

Surely a spring fork can be designed in which failure of the parallel link fastening does not involve wreckage? Of course, now I know, I shall add a safety fastening, possibly of piano wire in many turns, for my nerve is still good. But it ought not to be necessary for riders thus to ensure themselves against designers.

Also, since, when one puts on the brake in an emergency, the momentum of the sidecar swings one on round to the right, cannot someone design us a differential sidecar brake? It is of little use to elaborate refinements of comfort before we have attained the maximum of bare safety.

W. M. WATKINS-PITCHFORD.

THE SIDECAR FOR ADVERTISING PURPOSES.
A delivery sidecar made by the Sandham Engineering Co. for a boot manufacturer.

SIDECAR AND CYCLE CAR.

Sir,—Just at present it appears to be the correct thing to decry the sidecar combination on the plea of over-elaboration and high cost, and boom the three and four-wheeled cycle car as *the* passenger vehicle. Fortunately, not everyone is taking this line of action seriously.

When purchasing a light car a buyer is frequently informed that the question of high price is a myth when viewed in comparison with pre-war equivalent money values; and that a modern light car with self-starter and dynamo lighting at £500 to-day is but approximately £30 dearer than its pre-war replica without electrical equipment, calculating on the decline of the sovereign to one-half of its pre-war value on a purchasing basis. Following this line of argument, a 1921 A.J.S. sidecar outfit, with spare wheel, tyre, and screen, ranks equal to a £108 outfit in 1913-14, and I think everyone will admit the new model has not degenerated in finish or service in the meantime.

Further, £300 to-day will purchase the best motor cycle and sidecar at present produced, and, coupled with such attractions (luxuries?) as spare wheel, dynamo lighting, spring frame or specially sprung saddle, speedometer, electric horn, etc.—in other words, perfection as near as skill and brains can make it. For the same sum I have the choice of about six three or four-wheeled cycle cars, some of which have hardly had a thorough test, all of which are acknowledged to be rough, and admittedly made on a minimum cost basis in order to sell at the figure and still show a profit.

I am not condemning the cycle car. It is a good thing in principle, and will eventually win full regard: but, nevertheless, it appears to me to be a penny-wise-and-pound-foolish policy to disparage the ultra reliable luxury sidecar, symbolical of perfection, in favour of a cheaply finished, noisy, and not over smooth-running vehicle which, excepting one make, has not yet proved its real worth. After several months' running of a post-war cycle car, I have abandoned the type for the present in favour of a really good sidecar outfit. I am keeping an open mind on the subject, but cannot see the benefit of jeopardising my season's pleasure, under present conditions of cycle car advancement, for the sake of a supposed improvement in personal protection during wet weather. F. E. SCHOFIELD.

IN PRAISE OF WATER-COOLING.

Sir,—Although a reader of *The Motor Cycle* since number one, I have never dared to encroach on your valuable space. I have owned all classes of motor cycles since 1909, single and twin, but could never find that "just as you like it" mount.

In 1915 I purchased a second-hand water-cooled Scott and fixed a sidecar. I had this outfit two years, and up to the time of selling it only cost me £2 for mechanical repairs.

I, however, wanted more power, but after my two years' pleasurable experiences, decided it would have to be another water-cooled engine. My choice was a second-hand 1916 "Williamson," with 8-10 h.p. water-cooled Douglas engine. I bought this outfit through the advertising columns of *The Motor Cycle* in 1917, and it is still going strong. I have done over 8,000 miles on this machine, and every mile a pleasure.

I have toured Wales, Cornwall, Devon, and home counties, mostly with three up (sometimes four), and I have yet to find the hill that can make this engine labour, or get hot. As to cooling, the system is ideal. In traffic the control is everything needed.

As to speed, well—coming from Exeter last September, I met a friend on a 1920 famous American outfit, who challenged me to a run home, the last in town to pay for suppers all round. He had one passenger, I had two. Well, he paid. His passenger has now a water-cooled outfit, and I feel sure if some of those "red hot" air-cooled enthusiasts were to give the water-cooled engine a fair trial, they would never ride anything else. ROBERT MUNDAY.

TEMPERATURE CHANGES AND LUBRICATION—AMERICAN EXPERIENCES.

Sir,—Having ridden for a number of years in sections of the United States where the daily winter temperature may vary from 40° F. to 3° or 4° F. below, I feel experienced enough in lubrication matters to sympathise with Mr. David Tod and others who have had hand oil pump troubles.

I have used machines fitted with the common or garden variety of hand pump, and also with mechanical oiling (with supplementary hand pump). In my mind there is no question concerning the comparative merits of the two systems, but neither will give satisfaction unless a little judgment is used in choosing the oil. Hard labour at the kick-starter has taught me to go to a bit of trouble in exchanging the heavy treacle-like lubricant which my motor utilises in the warm weather for the thinner winter oils used here.

The oil tank on my machine is located behind the rear cylinder, which keeps it at a fairly fluid temperature, even at below zero, provided the motor has been warmed up by running, etc. If I should get caught out with the heavy oil, and a cold motor and oil tank, I resort to paraffin and my petrol syringe, thinning down the oil until the motor will start.

It has been my experience with hand pump lubrication that in cold weather and with heavy oil the hand pump has to be sturdy. If one will notice the construction of the hand pumps on such American machines as the Harley-Davidson, Indian Scout, and Reading-Standard, one will see that there is plenty of pump cylinder wall, and that the rider may put considerable effort on the handle without fear of the whole works fetching loose, and giving the repairman something to do. I recently rode a lightweight of British manufacture for several days, and when the mercury began coyly to descend into the thermometer bulb I was afraid to push too vigorously on the bijou hand pump handle for fear of ruining the whole lubricating system.

If you will permit a suggestion from an advocate of the mechanical oiler, put more metal into hand pump cylinders and plungers, and change your oil to suit extremes of temperature. Thus, if your motor calls for oil of a consistency of Mobiloil B for temperatures above freezing, use one of the consistency of Mobiloil A for zero weather.

I am not connected with the oil business in any country, but just cite these products as examples.

Hartford, Conn, U.S.A. D. R. HOBART.

SUMMARY OF CORRESPONDENCE.

Mr. L. W. G. Hartley writes further to his letter published last week on the retarding effect, compared with America, of our moist atmosphere against very high speeds. He suggests that the F.I.C.M. should arrange tests to determine exactly how much difference is existent.

Over the signature of "Mascot" a correspondent praises the Apollo special two-stroke plug for speed and hill work with that type of engine.

"D.H.D." writes endorsing the experiences of Mr. E. H. S. Tye concerning the Cox-Atmos carburetter. He also praises the conduct of his 3 h.p. Royal Ruby, to which the instrument is fitted.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

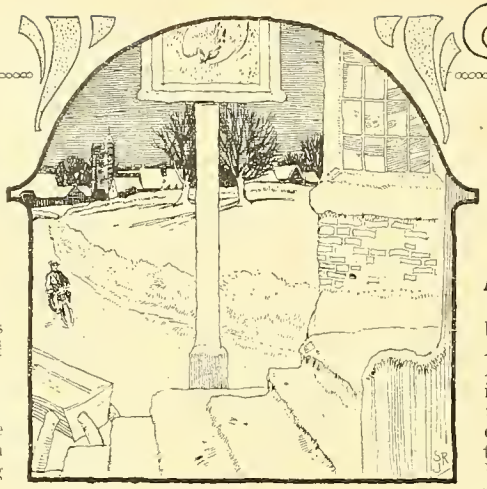
What Petrol Costs in France.

The price of petrol in France varies from 2.40 frs. to 3.20 frs. per litre (1¾ pints).

London to Edinburgh Course.

The 1921 London to Edinburgh course has been considerably stiffened, and when the details are published many aspiring competitors will receive a surprise.

The Richmond Meet.



This year the annual meeting of Northern motor cyclists which is held on Good Friday in the Market Place of Richmond, in Swaledale, will be organised under the auspices of the Yorkshire Centre, A.C.U. At a recent meeting it was decided that the organisation should be carried out by the York and Middlesbrough clubs, and as the latter preferred to leave the arrangements in the hands of the former, Messrs. F. T. Cleveland and A. K. Procter have been appointed joint secretaries; their address is The Kiosk, Lendal, York.

Benzole, Benzene, and Benzol.

That important and energetic body, the British Engineering Standards Association, has had the question of a standard definition and specification of benzol (commonly known as "benzole") before it for some time now; and its findings have just been issued in booklet form, copies of which may be obtained, at 1s. 2d. post free, from the Secretary, 28, Victoria Street, London, S.W.1. "Benzole" in future shall denote a liquid consisting roughly of benzene and not more than 30% (by volume) of toluene and xylenes.

The Grand Prix.

In previous years cycle cars have been admitted to the Grand Prix Race at the same time as two-wheelers, but this year it is considered that motor cycles are sufficiently important for them to have their own event; the cycle cars will have a race of their own in September, over the same course as that which will be used by the motor cycles on July 23rd. The motor cycle contest will gain enormously by being held the day before the three litre car Grand Prix. Because of this bigger event it is possible to spend larger amounts on the preparation of the course, as is shown by the voting of £10,000 for road improvements only for the ten and a half miles of highway. Further, the grandstands, the pits, and the barricades erected for the car race on the 24th July, will be available for the motor cycle event, and thousands of spectators who would not come for a motor cycle race only will be induced to visit Le Mans for the double event.

Pillion Riding.

It is apparently against the law in Auckland, New Zealand, to take a passenger on the carrier of a motor cycle, and there have been several convictions for the breach of this regulation. This law only applies within the city area.

Garage Accommodation in the City.

The Auto Cycle Union, having been approached by a considerable number of members with enquiries as to where garage accommodation for motor cycles is available within the City of London, has recently carried out a full investigation of this matter. From this the Union has ascertained that garage accommodation actually within the City is very restricted. Garage proprietors or others who may be able to assist in this matter are invited to communicate with the Auto Cycle Union, 83, Pall Mall, S.W.1, and the Union will be pleased to consider the appointment of any suitable premises as A.C.U. official garages.

Special Features.

NOTES FOR THE NOVICE.
RIDING TO WIN.
MODERN SPRING FORKS.

American Road Records.

Road records in America have now been banned by the Motor Cycle and Allied Trades Association. The M. and A.T.A., the governing body of the sport in America, has never officially sanctioned inter-city trials, since in most cases they entail the reckless breaking of the traffic regulations. The Auto Cycle Union in England has, of course, for many years taken similar action, refusing to recognise any road records.

A Provisional Control.

As announced by *The Motor Cycle* last week, the Royal Automobile Club and the Auto Cycle Union came to an agreement regarding the control of four-wheeled cycle cars for competition purposes.

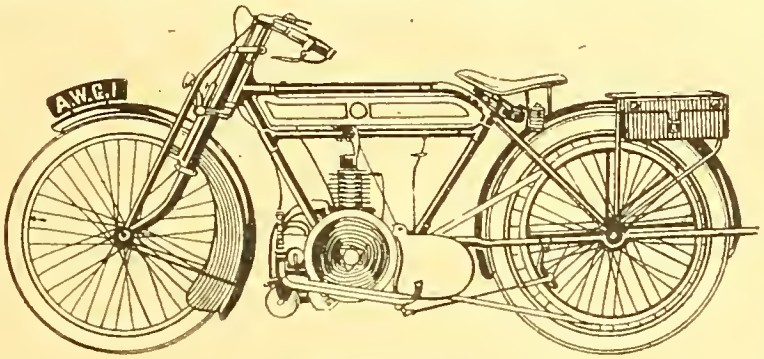
It was agreed that temporarily until the question of the line of demarcation between car and motor cycle is settled internationally, that the R.A.C. will favourably consider applications for permits for small four-wheeled vehicles coming under the definition of the Fédération Internationale des Clubs Motocyclistes (772 lb. weight 1,100 c.c. capacity or under) to compete in A.C.U. competitions in 1921.

The effect of this agreement is virtually that the Auto Cycle Union will control four-wheel cycle cars during the 1921 season, and it is anticipated that when international agreements have been formally ratified the control of this type of small car will be handed over permanently to the Union.

THE WAY HOME. Tenants moved into Leicester's first municipal houses last week. Their "lot" is not quite a happy one, however, as will be seen from the above illustration, which shows the only road home.

GAMAGES 1921 SUPER-SALE

THE "GAMAGE" TWO-STROKE



We are offering a limited number of these famous motor cycles at an amazingly low price during the Super-Sale only The high standard of excellence is rigidly maintained throughout

THE FINEST TWO-STROKE

The following Extracts from an unsolicited testimonial from an enthusiastic user render comment superfluous.

Bawtry, Yorks, 20/9/20.

"I have now run my 'Gamage' for a little over a year, on five days a week.....and over all kinds of roads and very often even across fields where there is no road, or even track. She has now run between three and four thousand miles and so far has had no repairs of any kind, save, of course, decarbonising the engine. **The machine will climb any hill on top gear** I once lent her for a week to my brother who rides a powerful single-cylinder machine, and he was astonished in the way the little Gamage went up the hills, and said he never would have believed it unless he had ridden the machine himself. It is only fair to tell you how reliable a machine you have put on the market at a reasonable price."

BRIEF SPECIFICATION

2½ h.p. Villiers engine, 2-speed gear, C.A.V. magneto, Best and Lloyd's semi-automatic lubrication, Saxon spring forks, Amac carburetter, 26 x 2¼ Dunlop tyres and Dunlop belt.

Usual Price £65

SUPER-SALE PRICE— **£58**

Carriage and packing extra.

Accommodation for members' motor cycles on the occasion of the Cup Final at Chelsea in April has been arranged for by the A.C.U.

R.A.C. and the Speed Limit.

Complete abolition of the speed limit is urged by the R.A.C. Several excellent arguments are put forward in favour of this course of action.

Defining "Owner."

Mainly on account of difficulties that have arisen regarding who is "the owner," for licensing purposes, of a vehicle purchased on the hire purchase system, the Ministry of Transport has provisionally defined "owner" as the "person by whom the vehicle is kept and used," who is, of course, not necessarily the legal owner. Registration books, therefore, do not constitute absolute proof of ownership with a power to sell.

Price Guarantees.

It is becoming quite common practice now amongst manufacturers to guarantee a full refund in the event of an early reduction in price. This issue contains many such announcements and, in addition, the following firms have notified us to this effect: Veloce, Ltd. (Velocette, to June 1st), Roberts and Hibbs (New Scale, to May 31st), and Cashmore Bros., Ltd. (Alecto, to May 31st).

Worth Winning.

Competitions are now the order of the day. The latest is an estimating contest organised by S. Smith and Sons, of 179, Great Portland Street, who will send an entry form to all purchasers of a K.L.G. plug between February 21st and March 7th. Competitors are asked to estimate the number of K.L.G. plugs sold by Messrs. Smith during the period mentioned, and the prize list includes a £300 8 h.p. Rover light car, a model H 4 h.p. Triumph, and a 2¼ h.p. Enfield lightweight, in addition to many other prizes.

Motor Cycle versus Roller Skates.

An exceptionally novel race between a 2½ h.p. Metro-Tyler motor cycle and Mr. A. R. Eglington, the world's record holder (on roller skates), will be run off at 9 p.m. at the Holland Park Rink, London, on March 9th.

Mr. G. F. Ammon, the motor cyclist, when interviewed at practice last week, stated that he found considerable difficulty in negotiating the 180° curves at each end of the floor. The consequent reduction in speed, however, is easily made up on the straight, which is of considerable length.

Mr. J. S. Bennett, of the Metro-Tyler Co., Ltd., informed us that the race is the result of a challenge by Mr. "Peggy" Bettison, the founder and manager of the National Sporting Club, who offers a side stake of £25.

Mr. Eglington's speed for the mile (the distance selected for the race) is just over two minutes; and, since a difference of two seconds only is the present standard of the competitors, it should prove an exciting event.

The machine is a standard one, with the exception of a fixed gear of 7½ to 1, and the use of Duralumin engine plates to reduce the weight.

Weights of Trials Machines.

It is possible that the 200 lb. limit may divide solo and sidecar mounts in future.

Efficiency.

At the Efficiency Exhibition at Olympia the A.A. is showing a model of one of its roadside telephone boxes.

Old Salonica D.R.'s Annual Dinner.

The second annual dinner will be held at the Torino Restaurant in Oxford Street, opposite Frascati's, on Saturday February 26th, at seven o'clock. This reunion is not confined to the old D.R.'s of any particular unit, but open to any D.R.'s who served in the Balkans. Application for tickets can be made to Mr. O. Feltham, 212, High Street, Ponders End, Middlesex, or Mr. W. Hines, Castle Brewery, Bedford.

Nine New Index Marks.

Re-registration under the new licensing regulations has apparently been responsible for the following batch of index marks, nine in all: City of Leeds, N W; County of Derby, N U; County of Glamorgan, N Y; County of Leicester, N R; County of Salop, N T; County of Somerset, Y A; County of Stafford, R E; County of Warwick, N X; and the County of Worcester, N P.

Two-stroke Motor Cycles.

For the first time an authoritative handbook on the practical management of two-stroke motor cycle engines has been produced. Known as "Two-stroke Motor Cycles" (published by Iliffe and Sons Ltd., 20, Tudor Street, E.C.4, price 3s., by post 3s. 3d.), it has been prepared by the staff of *The Motor Cycle* to meet the needs of the every-day rider. The illustrations cover a wide field, both by diagram and actual examples of existing practice, and the book will no doubt attain a popularity equal to that of "Motor Cycles and How to Manage Them." Next week we shall review some of its special features, reproducing some specimen illustrations.

Motor Cycle Tourists in France.

Motor cyclists who visit France must pay a supplementary tax of 12 frs. per month for two months. If their stay in the country is longer than two months full tax on the machine has to be paid.

Motor Cyclist Supervises New Trap.

A new short-distance trap in High Street, Eltham, is supervised by the local Douglas-mounted inspector. According to local reports, he recently gave chase to a motor cyclist who declined to stop, but the result is not known.

To Reduce Prices.

A meeting has been arranged at the Cannon Street Hotel, London, E.C., for 6.30 p.m. on Saturday, 26th inst. The object of this meeting is the establishment of an Association of Production Engineers, with a view to increased efficiency in manufacture, and consequently a reduction in prices. Particulars may be obtained from Mr. H. E. Honer, 273, New Cross Road, S.E.14, who is the convener of the meeting.

Mean Speed Records

At Brooklands on Thursday, February 10th, D. R. O'Donovan, on a 3½ h.p. Norton and sidecar, put up the following mean speed times for the flying kilometre and mile, which constitute British mean speed records in Classes G and H. Subject to approval by the F.I.C.M., they are also international records for these two classes.

AVERAGE MEAN SPEED RECORDS.

CLASSES G AND H (Not exceeding 500 c.c. and 750 c.c. respectively).

	Time.	Speed.
Flying Kilometre.—D. R. O'Donovan (Norton, 79×100 mm.=490 c.c., and sidecar)	33.99s.	=65.81 m.p.h.
Previous best: Oct. 19th, 1920, H. R. Davies (2¾ A.J.S. sc.), 62.84 m.p.h.		
Flying Mile.—D. R. O'Donovan (Norton, 79×100 mm.=490 c.c., and sidecar)	56.56s.	=63.57 m.p.h.
Previous best: Oct. 19th, 1920, H. R. Davies (2¾ A.J.S. sc.), 60.30 m.p.h.		

The motor cycle escort to H.R.H. the Prince of Wales in his recent official visit to Brighton. The riders are: P.C. Tindall, P.C. Latham, Sergt. Morgan, P.C. Holland, P.C. Funnell and P.C. Wood, M.C. All were mounted on Triumphs except Funnell, who rode a Douglas.

THE MOTOR CYCLISTS' PARLIAMENT.

Last General Committee Meeting of the A.C.U. 1920-21 Session held at Shrewsbury. Total Abolition of Speed Limit Suggested. Why Motor Cycles were not Taxed £5. Fruitful Work by all Departments of the Auto Cycle Union.

THANKS to the policy, first urged by *The Motor Cycle*, of holding its committee meetings in the provinces, the Auto Cycle Union is now regarded by everyone as a national organisation.

Before the war there was a feeling among motor cyclists that because the headquarters of the A.C.U. were in the Metropolis it was a London club, run by London men, chiefly for motor cyclists in the capital. Now that impression has been removed, and the Auto Cycle Union is firmly established as a *national* institution, with H.R.H. the Duke of York, K.G., as patron, governing the motor cycle movement for the benefit of its present and future participants.

A.C.U. Local Centres.

A feature during the past year has been the formation of centres, which divide up the country, enabling every motor cyclist in England to take an active part in the general work and to assist in furthering the interests of motor cyclists locally. To do this he need not necessarily become a subscriber to the A.C.U. direct, but may be a member of a local club which is affiliated to the governing body. Such clubs, in turn, are members of a centre which has a voice in the matter of government and, in addition, governs the pastime locally.

The General Committee meeting held at Shrewsbury last Saturday was very well attended by the representatives of motor cyclists all over the country. Lt.-Col. A. E. Davidson, chairman of the A.C.U., was in the chair, and in addition to committee men sent by the North-western, Midland, East Midland, Western, North-eastern and Yorkshire centres (in themselves a body well representing the interests of provincial motor cyclists), the following were also present: Rev. E. P. Greenhill (chairman of Competitions Committee), Mr. H. P. E. Harding (chairman of Touring Committee), Dr. A. M. Low, Major R. V. C. Brook, Col. F. S. Brereton, Messrs. W. H. Wells, F. A. Hardy, V. Horsman, H. Johnson, J. L. Norton, A. S. Ross, F. A. Applebee, E. J. Bass, J. A. Masters, R. I. M. Samuel, F. S. Whitworth, S. W. Philpott, F. W. Barnes, D. H. Noble, and T. W. Loughborough (secretary).

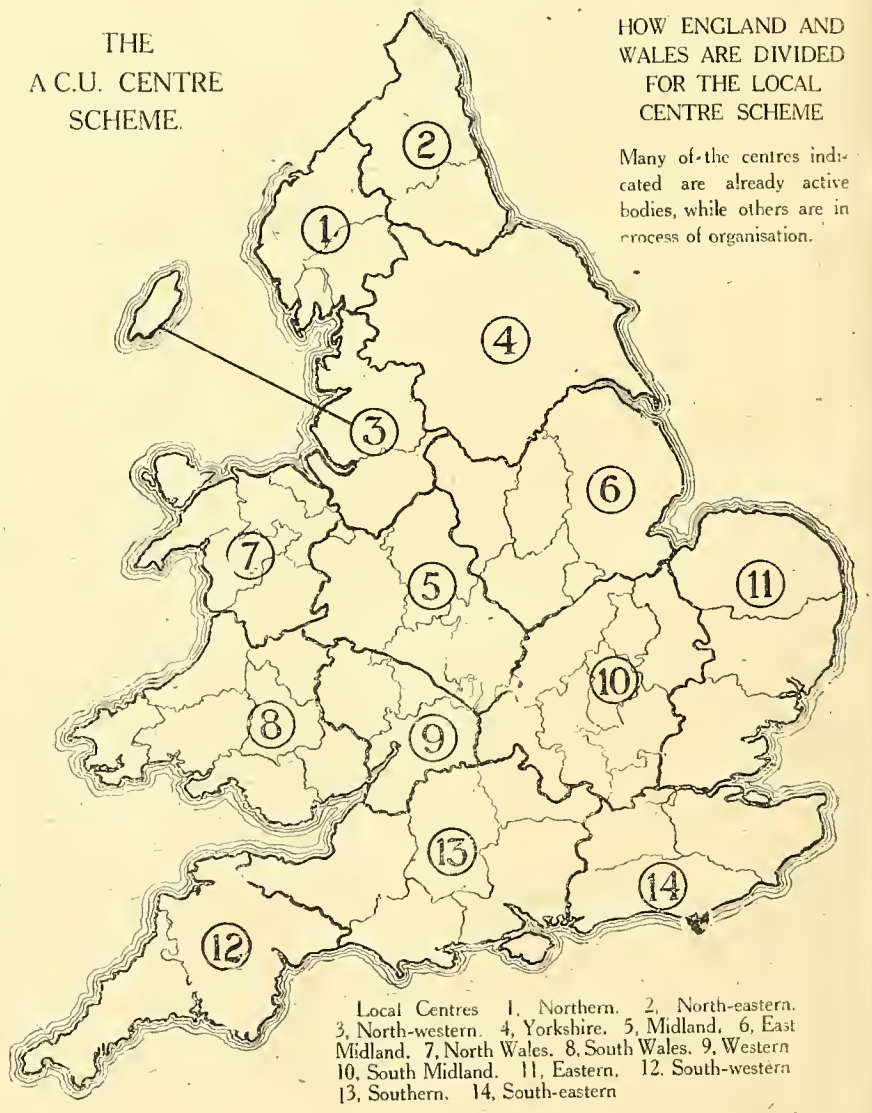
The Work of the Meeting.

This committee meeting was the last of the 1920-1921 session, and most of the work consisted of receiving the reports of the various committees, drawing up the annual report, receiving the financial report, and considering various points raised in their connection. It is outside our province to record details of all these matters, neither would motor cyclists generally be interested. Everyone who has now anything to do with committees and sub-committees knows that the amount of work done seems out of all proportion to the results attained, and that only the results count.

New Constitution of the General Committee.

As an outcome of the formation of local centres, the constitution of the General Committee has now been altered, and at the annual general meeting, which will be held in London at 6 p.m. on Friday, March 11th, a new committee will be formed as under:

	Maximum number.
PRESIDENT AND VICE-PRESIDENTS.—Elected at the annual general meeting from candidates nominated by committee or any centre, or any two individual members ...	13
R.A.C. REPRESENTATIVES. — Six appointed annually by the Royal Automobile Club, the parent body	12
INDIVIDUAL MEMBERS' REPRESENTATIVES.—Six appointed at annual general meeting of individual members, to hold office for two years	12
AFFILIATED CLUBS' REPRESENTATIVES.—Elected annually by Board of each centre, one per centre, with additional representatives up to a maximum of three per centre, one for every five clubs in excess of the first six	42
Total	79



Voting Power at Centre Meetings.

The centre scheme previously referred to is now settling down in satisfactory working order. On Saturday the voting power of a club was decided on a basis of one vote for each club delegate at a meeting, and an additional vote to be

THE A.C.U. CENTRE SCHEME.

HOW ENGLAND AND WALES ARE DIVIDED FOR THE LOCAL CENTRE SCHEME

Many of the centres indicated are already active bodies, while others are in process of organisation.

Local Centres 1, Northern. 2, North-eastern. 3, North-western. 4, Yorkshire. 5, Midland. 6, East Midland. 7, North Wales. 8, South Wales. 9, Western 10, South Midland. 11, Eastern. 12, South-western 13, Southern. 14, South-eastern

The Motor Cyclists' Parliament.—

tended by such delegate or delegates on behalf of their club for each hundred, or part of hundred, members on the books of their club. An independent vote may also be exercised by each officer of the centre, and the chairman shall have a casting vote.

In the event of a centre becoming wound up, disbanded, or ceasing to exist, it was proposed that all moneys and properties of the centre should be deemed to be the property of the clubs in the centre, and be distributed amongst them in proportion to their membership. This motion was defeated, however, and it was agreed that in such cases any accumulated funds will become the property of the Union.

The Speed Limit.

One of the national matters considered at the meeting was the proposed revision of the law as to speed limits. All clubs had been invited to give their opinions, and these were by no means unanimous either for or against total abolition or increasing the present limit. It was decided to support the proposals of the Motor Legislation Committee, which favours total abolition.

In conversation with Mr. T. W. Loughborough after the meeting we gathered that this was the feeling of the majority of members and also the officials of the Union. Mr. Loughborough pointed out, however, that quite irrespective of the ultimate decision, the Union strongly desired to bring about an alteration in the dangerous driving clause. As the law stands at present the police are able to prosecute for fast driving on roads *where traffic might reasonably be expected at the time*, and this should be amended to take into account fact only.

Brakes on Racing Machines.

One of the several matters of interest to competition riders brought forward was that dealing with brakes on racing machines. It may be recalled that the absence of brakes was the cause of an accident on Brooklands during last year, and it has now been decided that, with the exception of machines entered for record breaking on enclosed tracks, all motor cycles taking part in races, and also in speed trials, must be fitted with a brake.

SIX DAYS TRIALS REGULATIONS.

Although little has been definitely decided regarding the Six Days Trials, the Competitions Committee and its Advisory Committee are busy preparing the final regulations. At a recent meeting of those responsible for competitions it was decided that the following is the definition of "engine capacity":

> "That for the purpose of the computation of engine volume, the cubic capacity be taken as the volume swept by the piston or pistons or other moving parts, subjected to the products of combustion to produce power."

Among the recommendations of the Advisory Committee, of which, incidentally, Maj. Watling, of the Manufacturers' Union, is a member, may be mentioned the plea that time lost through punctures during the speed tests at Brooklands should be allowed.

It is suggested that one day only be devoted to testing the consumption of petrol and oil. The suggestion that all machines over 350 c.c. shall propel sidecars has met with unanimous opposition, and in place of this feature it is proposed that team prizes should be awarded to solo machines under 350 c.c., and 500 c.c. and sidecar machines under and over 550 c.c.

Awards for Light Machines.

The Advisory Committee also recommend that one special award should be given for the best performance put up by any machine weighing under 200 lb. unladen, regardless of class.

Whereas in the original recommendations it was decided to divide solo and sidecar entries at the 350 c.c. mark, it is not altogether improbable that the final regulations will fix the line at 200 lb. weight. This would mean that all machines ridden solo would have to be of a weight which permits them to come into the 30s. taxation class.

Wheel Slip and Clean Climbs.

It has also been suggested that the secret check be done away with in reliability trials, but since the margins allowed in A.C.U. trials are very wide, it is not probable that this will be done. Another suggestion of the Advisory Committee is that a rider brought to a standstill on a hill through wheel slip should be credited with a clean ascent if he keeps his engine running and, lifting his back wheel on to a good surface, completes the climb.

So far nothing definitely has been decided regarding the Six Days course, but since the first and last days will be at Brooklands, one has only to glance at the map to gain a fair idea of the nature of the trial. In any event, there cannot be more than two days of hill-climbing.

This Year's Tourist Trophy Races.

It has been agreed that the maximum number of entrants for the T.T. races will be 100, and that each manufacturer will be permitted to enter three machines of any one type, and up to three entries will be accepted from private riders of any one model for each race.

The Year's Work.

Although the A.C.U. has not fulfilled to its entire satisfaction every ideal which it has had before it, the Union has full cause to feel satisfied with what has been accomplished. The eighteenth annual report of the General Committee contains evidence of activity in all the many fields in which the body operates, and which members often overlook.

During the past year the membership has steadily increased. At the General Committee meeting held at Cambridge on December 17th it was decided to raise the annual subscription from 10s. to £1, but it was agreed that no entry fee should be charged, and that the use of the Union's badge should be free to every member during the currency of his subscription. So far, it is recorded, raising the subscription does not appear to have unduly affected the membership roll.

The number of meetings of the several committees reflect the hard work put in by the voluntary force behind the movement. The Touring Committee met six times, the Competitions Committee thirteen times, and the Management Committee held fifteen meetings. These meetings are augmented by those held by the various sub-committees and those of the local centres.

THE A.C.U. SHARE IN LEGISLATION.

The activities of the new Ministry of Transport appear to have kept the Union busy, for it has actively participated in the representation of motor cycling interests, the secretary taking an important share in the work of the Motor Legislation Committee. One of the most general cries from motor cyclists when the new taxation scheme came into being was "What have our motoring organisations been doing?" In passing, we have usually found these questions come from riders who belong to no organisation, and therefore do not know of their activities. The report referred to shows that the Auto Cycle Union has been doing a great deal, and if the results are not altogether as every motor cyclist would like, they are probably better than they would have been had there been no A.C.U. to act and advise on the Motor Legislation Committee. For example, we are told in the report that the Government suggested £3 as the minimum for a motor cycle tax, and it is no secret that there were signs of £5 being the figure in the minds of the Ministry. As is now known, this was reduced to 30s. for machines not exceeding 200 lb. in weight. Further pressure was also brought to bear at the last moment in the House of Commons to reduce the scale applicable to a light sidecar outfit from £4 to £2 10s.

A United Front.

These modifications of the original Government intentions were only secured because the A.C.U. and the Manufacturers' Union were able to present a single and undivided expression of view, which was adopted *in toto* by the Motor Legislation Committee. The Ministry of Transport, therefore, was not in a position to play off one organisation against another, as it was, unfortunately, so successful in doing with reference to the maintenance of the petrol tax.

The report details other legislation work, past and present, which we are unable to give in full.

The Touring Department has also had a busy time. In the course of the year over 1,000 official hotels and repairers have been visited (as against 700 the year before); 800 applications for Customs papers, international visés, etc., were dealt with; and more than 1,000 foreign routes, in addition to upwards of 5,000 British routes, supplied.

Get-you-home Scheme.

Nearly eleven hundred cases of breakdown or accident were relieved through the get-you-home scheme during the year, and the Consular service has been greatly expanded. The number of consuls appointed has increased from 25 to 57, and others are receiving consideration. It is interesting to know that at least one lady consul is being appointed.

Prices of Second-hand Motor Cycles.

A Schedule of Prices at which used and shop-soiled Motor Cycles were being offered in the miscellaneous advertisements of last week's issue of "The Motor Cycle."

Make, H.P., and Date.	Classified Prices.	Average Price.

THE PRICE QUESTION.

The Trade Outlook as viewed by Motor Cycle Manufacturers. Some Reasons Advanced by the Trade as to why Reductions cannot be Expected for Some Time.

THERE appears little likelihood of substantial price reductions for some time. Several manufacturers have already made public announcements to this effect, and one or two guarantee prices for a limited period.

Such an action is, of course, one for the individual judgment of each manufacturer after he has reviewed the circumstances of his own particular case. As regards manufacturers who have large outputs or who produce machines in which expensive labour and materials represent a high proportion of value, a material price reduction cannot be expected at the present time in view of manufacturers' desire to give the public a highly reliable machine. Large stocks are still held by reason of the big purchases of raw materials and component parts last year at prices representing in some cases advances of 300% over pre-war, to which must be added labour costs (under conditions which have not made for production commensurate with wages paid).

Refinement or Low Cost?

An alternative method of price reduction might be modification in design, equipment, or quality, tending to economy, but which might not be favourably regarded by the user who is constantly demanding further refinements.

Whilst all desire to see price reductions, the user must remember that what in effect are "price reductions" are continually taking place in the shape of improvements in design, addition of desirable features, accessories, speed, luxury, and comfort, which are found in an increasing degree in cycles and motor cycles. The value of these to the user, and the cost thereof to the manufacturer, are both real and substantial.

When manufacturing costs are stabilised, and the manufacturer can reasonably expect an output of such a quantity and quality as is commensurate with his expenditure, then can the purchaser expect the same high-grade quality products at prices materially lower than those reigning at the present time.

It must be borne in mind that purchasers in the past have been able to obtain their wants at a lower retail price by reason of the large export trade which enables production of a larger number of vehicles at a lower price than would be the case if the home market alone were catered for.

Effects of Restricted Export.

The export trade is suffering great disabilities at present. Certain countries are entirely barred from importing British products; in other countries the imposition of drastic Customs tariff has almost killed the trade. Elsewhere depreciated exchanges and the refusal of the responsible authorities to permit the export of gold have almost completely barred the export of motor cycles.

Not only is this state of affairs affording the greatest anxiety to all concerned, but such a situation must inevitably reflect upon the selling conditions obtaining at home.

The Balance of Motor Cycle Engines.

Further Light on the Question of Balance. How Frame Design has to be Studied in Conjunction with Engine Balance.

THAT the theory and practice of balance are of interest alike to the expert and the general reader is proved by the number of queries on this subject that our technical department receive. Naturally, therefore, our article of February 3rd caused much comment and friendly discussion amongst our readers, especially so as it emphasised the effect of varying connecting-rod lengths—a point which has hitherto had little prominence. We print below, *in extenso*, the views of two correspondents further to this theme.

Mr. Georges Funck, A.M.I.A.E., of Coventry, discusses the important question of "under-balance" or "over-balance," and comes to the conclusion that for motor cycle engines the latter is the lesser of two necessary evils. He writes as follows:

"I have read with very much interest your article, 'The Balance of Motor Cycle Engines.' The effect of connecting rod length on the balance is shown admirably, and should once for all explode the *perfect* balance theory of the 90° engine. This perfect balance, as you mention, is only the case for infinite connecting rod length, which obviously is never possible in actual practice.

"However, there is one important point I desire to mention in connection with balance on which your article does not touch, *i.e.*, that for such engines which cannot be theoretically *perfectly* balanced, as is the case with most motor cycle engines, except the flat twin, we must take into consideration the machine in which the engine has to be used.

In our issue of February 3rd we published an exhaustive article on the balance, and balancing, of motor cycle engines. Two interesting letters, both from qualified engineers on this subject, are printed here, one dealing mainly with further theoretical considerations and the other with the practical side.

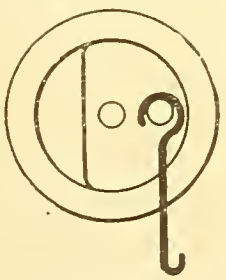
"Taking the case of a single engine in particular, as balanced according to your investigation (fig. 7), there remain two main forces of the largest amplitude essentially at right angles. One is vertical and one horizontal.

"By 'under-balancing' we increase the vertical one and decrease the horizontal one. 'Over-balancing' has the opposite effect. These vertical or horizontal free forces, which in no case can be wholly eliminated, are transmitting themselves to the frame of the machine, and through synchronisation are setting up disagreeable vibrations.

"Now since the machine rests on tyres and generally has a spring fork and sometimes a spring frame, which all are tending to assist vibration in a vertical direction, I am of the opinion that the vertical component is the most harmful one, and should be kept rather low. The horizontal component, however, has no such elastic means to assist vibration. From this consideration I consider that the best results are obtained by 'over-balancing' the engine, and the amount of overbalance depends entirely on the machine itself and, I venture to say, on the rider also.

"It is the 'under-balanced' engine which gives the rider the uncomfortable 'electric' shock through the handle-bars, and which makes it difficult for him to keep his feet on the footboards.

"An engine giving good results on one machine needs re-balancing to give equal results on another machine. This is particularly noticeable if the engine is mounted in two widely different machines, such as a motor cycle and a cycle car or light car. This 'over-balance' might under the circumstances require to be carried to a high degree. In the light of the above considerations, it will be noticed that the 90° engine is not so favourably placed as, for instance, the 60° engine, and the rectification presents difficulties which are non-existent for the 60°, and, according to the machine, the 60° will give equal, if not better, practical results.



"As space is rather limited, I would like to mention one further interesting fact. The free unbalanced force is moving in opposite directions to the rotation of the engine, and does not move round uniformly, although the engine may turn at a uniform speed. This non-uniformity, again, has a great influence on the synchronous vibration.

"One point in your article, I consider, needs rectification as being very misleading. In the last paragraph but one you declare that the alteration (lightening or weighting) must 'be made at a distance from the centre exactly equal to the crank radius.' I presume the writer had in mind that if the *exact* amount of weight as revealed by the balancing test (fig. 17), either deficient or in excess, is either added or removed, it will have to be in the position as indicated in your article. However, the same result is evidently obtained by removing or adding less, as the case may be, at a distance greater than the crank throw, provided the weight alteration is proportionate to the relative distances from the centre, *i.e.*, the greater the distance from the centre at which the correction is made, the smaller the correction need to be."

Mr. Arthur G. Booth, A.M.I.A.E., writing from Wolverhampton, gives another and possibly more accurate method of actually carrying out the operation in practice. It is noteworthy that his concluding paragraph should raise the same point as Mr. Funck, *i.e.*, that it is not necessary for the balance weights to be on a coincident diameter with the crank pin, provided they are proportionately heavier or lighter as the radius decreases or increases on that of the crank pin. Mr. Booth's letter follows.

"I have read with great interest the article on balance, and wish to congratulate the author on the lucid way in which he deals with his subject.

"May I be allowed space to raise a point which has come to my notice in regard to the actual operation of balancing? I find, particularly in engines which have developed very little wear in the big end, that if the balance is obtained by the method illustrated in fig. 17, it is very difficult to arrive at an accurate result, and that an ounce or two either way has no perceptible influence on the equilibrium of the flywheels. This is due to the slight amount of frictional resistance to rotation in the big end of the connecting rods hampering the free movement of the flywheels. Also this slight binding of the big end causes the C.G. of the reciprocating parts to swing a small distance away from a vertical line drawn through the crank pin centre, thus altering the leverages.

Another convenient method of carrying out the practical side of balancing. (See letter from Mr. A. G. Booth, A.M.I.A.E.)

"A method I have found more successful in practice is as follows:

"Build up the flywheels without the connecting rod, piston, etc., and place them on the runners, as in fig. 17, suspending the weight to be balanced from the crank pin by means of a steel wire (spoke wire is very suitable) hooked at one end, the weight of the wire being included in the total weight. The hook should have an internal diameter slightly larger than that of the crank pin, and the contact side should be bevelled to a knife edge.

"With a little lubricating oil on the crank pin, the weight will be found to hang quite freely, and the balance can be obtained almost to a dram, thus assuring the correct proportion of the reciprocating masses being represented.

Further Light on the Question of Balance.—

"This method gives more accurate results, obviates the necessity for drilling a hole opposite the crank pin from which to suspend the weights, and is no more complicated than that advocated in the article in question.

"The weight to be suspended is equivalent to all the rotating masses plus the correct proportion of the reciprocating masses as stated by the author, and should be obtained thus :

"(1.) For rotating masses support the big end of the connecting rod at a point opposite its centre on a delicate spring balance (postal scales are very good), holding the piston and keeping the connecting rod horizontal meantime. If crank pin rollers and cages are fitted, these must also be weighed with the big end.

"(2.) To obtain the reciprocating masses, subtract the rotating weight already found from the total weight of all the parts, *i.e.*, piston, connecting rod, gudgeon pins, and bearings.

"For a twin-cylinder engine, weigh the two big en when obtaining the rotating masses, and subtract this fr the total of all the parts for reciprocating masses.

"One other point I wish to bring forward. Why stipula that when the flywheels are out of balance the alterati must be made at a distance from the centre exactly equ to the crank radius? A more common method is to remo the metal from the rim, when only about .4 of the form weight of material need be taken away, due to the ext leverage obtained.

"I think it should be mentioned that metal removed mu be taken in equal amounts and at the same point from ea flywheel; also that alterations to the balance of engin with an outside flywheel must be made in the bob-weight not in the flywheel."

We invite further criticisms and opinions on th important question. At a later date we shall publis a review, by the writer of the original article, up the points raised.

THE SPEED LIMIT.

Opinions of our Readers on the 30 m.p.h. or No Limit Question.

ON first thoughts one would be inclined to consider that the majority of motor cyclists would favour the complete abolition of the speed limit were the decision left in their hands. Yet, although completely representative data will not be available until the publication of the voting figures by the two associations who are at present circularising their members, we think that only a small minority favour this drastic step. This opinion is borne out by various letters that we have received on the subject, extracts from which we publish below.

"Why not have the speed limit abolished on all main roads, except 200 yards each side of cross roads and 500 or 600 yards outside any town or village? The speed limit in these areas should be the present limit of 20 m.p.h., and warning signs erected in conspicuous positions to show where the limits commence. Other signs should be set up about 100 yards before the speed limit signs, to act as distant signals.

"Also, all the responsibility should be put on the vehicle turning out of the side road on to the main road. All side roads should be well danger posted. By main roads, I mean all roads except narrow winding lanes (which should keep to the present limit). The option of having no speed limit on small but straight by-lanes should be left to the discretion of the local authorities. "COMMONSENSE."
"Malvern."

Dangers of No Limit.

"The A.A. and M.U. demand the opinion of its members on the speed limit and taxation of motors.

"Question No. 3 can be dealt with at once. A flat rate tax on motor spirit is the only *fair* system.

"As to Question No. 1, motor vehicles nowadays crowd every highway in the kingdom. A speed limit *suitable to the particular road* is necessary in order to protect all road users. The absence of a speed limit would restrict offences for alleged excessive speed to driving to the public danger, which is far more serious than exceeding a speed limit, and which is capable of a much more elastic and less certain proof: the opinion of a village policeman might suffice. A reasonable speed limit would, however, provide a basis whereby a motorist summoned for an offence under Sec. 1 para. (1) of the Motor Car Act, 1903, would be safeguarded, for, if he were accused of driving '*at a speed* or *in a manner* which is dangerous to the public,' the fact that he had kept within the speed limit at the time would invariably operate in his favour. A speed limit is absolutely essential in Great Britain, and it should vary (as suggested below) for each class of road, and also for the type of motor car. My reply to Question No. 2, therefore, is a substantial 'Yes,' qualified as follows:

"Speed level on first-class roads, 40 m.p.h.; second-cla roads, 30 m.p.h.; third-class roads, 20 m.p.h.; and throu towns and villages 20 m.p.h. or lower, according to lo requirements.

"All motor vehicles exceeding 2 tons in weight to ke within half the suggested limit. "G. W. HUNTBACH."

A 20 m.p.h. Limit—with No Traps!

"Is it not best to let sleeping dogs lie? or, in oth words, to retain the present limit of twenty, which is actual nearly a dead letter already?

"As things are going at present, I imagine that anoth ten years should see the 20 m.p.h. forgotten, *whether it erased from the Statute Book or not.*

"On the other hand 'thirty' is a much more practic figure—so practical, in fact, that it would, in all probabilit be strictly enforced. And who amongst us has not exceede thirty at times? Even the 'babies' reach thirty-five.

"The consequences of no limit leave little to imaginatio We should all be haunted by 'Section One' (isn't it?) of t Motor Car Act and probably never dare to exceed fifteen.
"London, S.W." "Z.Y.X."

Lesser of Two Evils.

"The speed merchants will likely be shocked to think any alternative to no limit. I felt that way myself until saw an article on the subject that set me thinking.

"First, suppose the maximum limit to be abolished. T probable result would be:

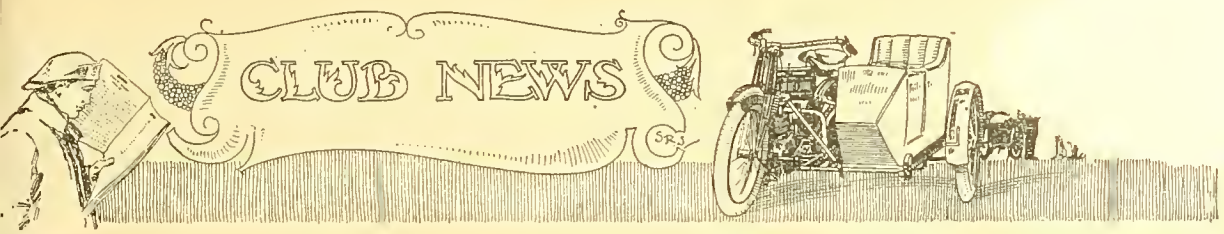
"(1.) Certain motorists will take advantage of the fac and drive alike to the danger of the public, other motorist and themselves.

"(2.) The police will proceed to convict them for dangero driving; but, usually being without commonsense, will al convict innocent motorists at the same time.

"(3.) Those magistrates who at present mete out justi will fine or otherwise punish those motorists who are brough before them, without discriminating between the sheep a the goats.

"(4.) That punishment for reckless driving will be muc heavier than for exceeding the speed limit.

"Next suppose the limit to be raised to 30 m.p.h.:



"(1.) That, for usual condifions and long tours, I do n think 30 m.p.h. would be found an excessive restriction up speed.

"(2.) That for really good straight stretches, it would almost as bad a restriction as 20 m.p.h.

"(3.) That probably the police would trap those same goo stretches.

"(4.) That fines would likely be increased, though peop would really not go faster than they do now.

"In conclusion, it seems we get caught both ways, thoug not so badly by the second alternative.
"Cambridge." "CANTAB."

Southend and District A.C.

e have before us the annual report e Southend and District A.C., and, ng from this, the club is a very e" body indeed. Its activities in- a legal section, with the services honorary solicitor, and an insurance ommittee, and it has to its credit ppointment of an R.A.C. guide in istrict.

Woolwich and Plumstead M.C.C.

party of Woolwich club members rather a poor showing at Cudham t a recent week-end. Deep ruts have formed by locked waggon wheels, nost of the climb resembles a newly hed field. A solo Triumph stopped times at the bend, and a sidecar nto a bank. The party found Brasted Westerham hills in good trim, but Hill (Crown Ash) very loose.

Wrexham and District M.C.C

Wednesday, February 9th, the ham and District Motor Cycle Club its first annual dinner at the nstay Hotel, the Mayor, Ald. T. age, presiding. Over 100 guests were tained, including Mr. Phillpott, the U. consul, Liverpool, and members e North Wales Club. The trade was otionally well represented by both s and makers. An excellent concert the usual vote of thanks terminated st enjoyable evening.

Forthcoming Club Events.

Feb. 19.—Essex M.C. One-day Winter Trial.
Feb. 19.—Bristol M.C.C.—Opening Run.
Feb. 27.—Wallington and District M.C.C. Club Run.

Ivy M.C.C. (Wolverhampton)

At an enthusiastic meeting, on Thursday, February 10th, of members of the old branch of the N.M.C.F.U., it was decided to carry on the club in future as the Ivy M.C.C. (Wolverhampton), with headquarters at the Mitre Hotel, Victoria Street. Mr. W. J. Dawes, 86, Vicarage Road, was elected chairman, and Mr. G. H. Sanders, 223, Dunstall Road, was elected secretary. Subscriptions were fixed at 5s. per year for gentlemen, and 2s. 6d. for ladies.

Stourbridge M.C.C.

The next event of this club will take the form of a social evening at headquarters, the Woodman Hotel, Clent, on Saturday, February 26th, at 7.30. A good musical programme is being arranged, and a very enjoyable evening is expected. It is hoped that all members will make a special effort to attend. All motor cyclists are cordially invited, and any wishing to become members of the club are requested to get into communication with the secretary, 111, High Street, Stourbridge, who will be pleased to furnish full particulars.

Westmorland M.C.C.

At the invitation of their popular president, Mr. R. Rainshaw Rothwell, of Broom Riggs, Hawkshead, some six hundred members and friends of the Westmorland M.C.C. thoroughly enjoyed a concert at the Town Hall, Kendal, on February 10th.

At the moment the committee is busy with arrangements for the annual open hill-climb at Orton Scar on Easter Monday, March 28th. Motor cyclists who propose to attend the rally at Richmond, Yorkshire, on Good Friday will be able to include both events during the Easter holidays.

Leeds and District M.C.

A general meeting, adjourned from January 13th, was held at the new headquarters, the Albion Hotel, Leeds, on February 10th. Among other business, the following officers were elected for 1921: President, Col. Sir E. A. Brotherton, Bart., M.P.; vice-presidents, Messrs. O. Brooks, S. Jepson, H. H. Charge, T. Chappell, sen., A. Walton, and H. A. Crawford; trials hon. secretary, Mr. Martindale; delegates to the Yorkshire Centre of the A.C.U., Messrs. A. C. Thornton and R. Cawthorne.

Mr. S. Jepson has presented the club with a valuable watch for use by the official timekeeper in competitions. A hearty vote of thanks was accorded the donor.

ON THE ROOF OF WALES. In spring, summer, autumn, and even winter, there is always new touring ground to be found in Wales. The A.J.S. owner has discovered that there are some fine roads over the mountains in the central counties.

...rict M.C.U.

...known as the Motor Cycling ... The programme ...uns, speed trials, and ... J. Bonnard is treasurer, ... Tilney secretary *pro tem.*

A Club for Harley-Davidson Riders.

Several enthusiastic riders of Harley-Davidson motor cycles in North-west London propose forming a club to be known as the Harley-Davidson Motor Cycle Club. Subscriptions are 10s. 6d. for members and £1 1s. for honorary members.

The proposed club has the approval of the Harley-Davidson firm, who have promised a substantial donation.

Motor cyclists who desire to join should communicate with Mr. Rowntree, 325, Kentish Town Road, N.W.

Eastern Counties M.C.

The Eastern Counties Motor Club will hold its annual general meeting at the Rose and Crown Hotel, Walthamstow, on February 21st, and hopes to continue the usual season of social runs and picnics as before. The Executive will be pleased to hear from anyone wishing to become members to associate in the programme. We are desired to point out that the above club is run purely on social lines for good fellowship and intercourse of kindred spirits.

Exeter M.C. and J.C.C.

At the annual general meeting of the Exeter Motor Cycle and Junior Car Club, held under the chairmanship of Mr. C. C. Harvey, in the unavoidable absence of the president (Sir Robert Newman, Bart., M.P.) and Mr. B. C. Matthews (chairman of the committee), it was decided, after a lengthy discussion, to debar trade members from taking any part in the management of the club. The new officers appointed were: Hon. secretary, Mr. C. C. Harvey; assistant hon. secretary, Mr. R. S. Hartree: hon. treasurer, Mr. A. M. Hull; committee, Rev. R. C. Owen, Messrs. C. R. Claridge, W. R. Bright, G. Goodchild, L. Mock, P. L. Crews, L. Peters, and J. Clarke. The retiring hon. treasurer (Mr. Tapley Soper) and the late hon. secretary (Mr. T. J. Mooney) were heartily thanked for their services.

TO CLUB SECRETARIES.

For reference purposes and in order to place on record the numerical strength of organised participants in the pastime, will club secretaries please supply us with the following information:

(1) Date on which club was formed.

(2) Number of members on January 1st, 1921, or in the case of a newly formed club, at current date.

(3) Fixture lists for 1921—when ready.

(4) Secretary's address.

(5) Press Secretary's address.

(6) Whether affiliated to A.C.U. or not.

Envelopes containing club matter should be marked "Club" on the top left-hand corner, and addressed to the Editor of "The Motor Cycle."

Colchester and District M.C.

Mr. A. Crowther, a vice-president, presided over a large company, including ladies, on the occasion of the club's annual dinner. Interspersed with the speeches, a capital musical programme was provided, and the floor was afterwards cleared for dancing.

Coventry and Warwickshire M.C.

In the nature of an opening run, a speed-guessing competition was attended by some forty members on Saturday, February 5th. Considerable local interest was taken in the event (as in the doings of the club generally), and an enjoyable afternoon's sport was provided. G. F. Evans (3½ Sunbeam), with an error of one minute, was first in the solo class, and E. S. Astley (5-6 Rover sc.) (48 seconds late) was the most consistent of the sidecarists.

Members who are desirous of competing in the Colmore Cup trial (for which arrangements have been made to make them eligible) should communicate their intentions at once to Mr. Phil Mosedale, "The Nook," Maney Hill Road, Sutton Coldfield.

The Motor Cycling Club.

The next important event to be held by the M.C.C. is the London to Land's End trial on Friday and Saturday, the 25th and 26th March. Entries close on Tuesday, March 1st; the trials hon. secretary is Mr. B. Alan Hill, "Apsley," Fellowes Road, South Farnbor... Hants. Intending competitors who d... to join the M.C.C. for the purpos... this competition must forward ... applications to the secretary, Mr. S... comb May, 34, Gower Place, Lon... W.C., so as to reach him not later ... Tuesday, February 22nd.

Wallington and District M.C. and L.

The club will hold its annual f... dress carnival dance on Monday, M... 14th, at the Small Public Hall, Croy... from 8 p.m. to 1 a.m. Bands wil... supplied by Mr. Marius B. Winter, ... ton House, Regent Street, ... App... tion for tickets, which are 8s. 6d. e... should be made to the secretary, Mr... M. Bowen, the Chalet, Woodcote Ave... Wallington, Surrey.

Blaina and District M.C.C.

A motor cycle club has now ... formed as above. The following off... were elected: Chairman, Mr. Robe... captain, Mr. T. Nicklin: vice-capt... Mr. H. Matthews; treasurer, ... Murray; joint secretaries, Mr. Harr... ton and Mr. H. Prichard. The se... taries would be very pleased if o... club secretaries would forward him ... useful hints on club management.

Worcester and District M.C.C.

On January 27th the club held ... annual general meeting at the Pack H... Hotel, Worcester. The secretary's re... stated that the success of the club an... its members in competitions through... 1920 was nothing short of marvellous, ... it could safely be said that no other ... could present such a record. A hill-cl... and one-day trophy event were extren... well supported, and the hill-climb attai... almost the importance of an open ev...

Neath and District M.C.C.

A reliability trial is to be run on Ma... 27th, starting at 10 a.m. prompt. ... winner will become the holder of a ha... some challenge cup, and there are ot... prizes of gold and silver medals. ... course will not be too stiff, thus allow... small machines a chance to gain ... premier award.

The Club is forming an excellent p... gramme for this season, including sp... trials, hill-climbs, reliability runs, ... social functions. Particulars may be ... from Mr. Fernand Dupont, La Mar... May's Hill, Neath.

ACTIVITY IN ITALY.

THE Italian motor cyclists have in front of them a year full of interesting and sporting competitions in a quantity far more numerous than any other preceding year.

The fixtures list of sixty-three events was fixed by the delegates of all clubs affiliated to the Moto Club d'Italia at a recent meeting in Milan. This programme was officially inaugurated on Sunday, January 16th, at Rome, with a hill-climb. The following are the results of this event which was called the Gran Premio d'Inverno:

CLASS 250 c.c.—1, Ciai (Clyno); 2, Perucci (Ivy).

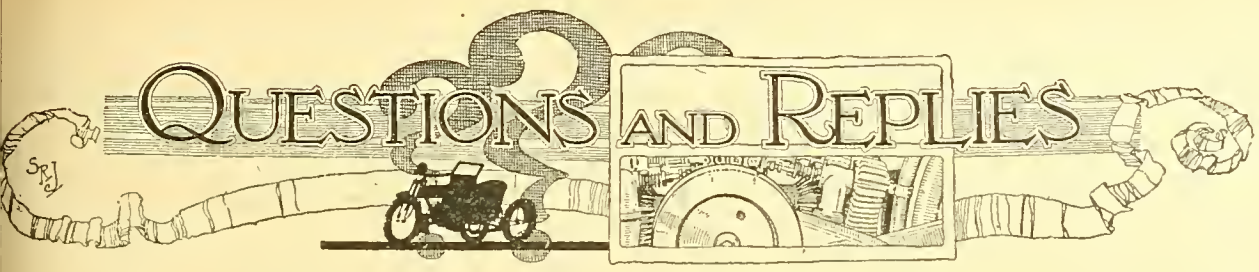
CLASS 350 c.c.—1, Del Sordo (Terrot).

CLASS 500 c.c.—1, Minetti (Della Ferrera); 2, Marcolli (Triumph); 3, Boccolini (Motosacoche); 4, Trivellato (Sunbeam); 5, Cittadini (Motosacoche); 6, Di Giulio (Rudge).

CLASS 750 c.c.—1, Garettoni (Harley-Davidson); 2, Rimoldi (Della Ferrera); 3, Madrulli (B.S.A.); 4, Bruscoli (Sarolea); 5, De Prosperis (Scott).

CLASS 1,000 c.c.—1, Faraglia (Harley-Davidson); 2, Malvisi (Harley-Davidson); 3, Visioli (New Imperial); 4, Ruggeri (Harley-Davidson); 5, Genevini (Indian); 6, Chimici (Indian).

SIDECAR CLASS, 1,000 c.c.—1, Malvisi (Harley-Davidson); 2, Fizzoni (Indian); 3, Putti (Indian); 4, Morabito (Harley-Davidson).



It was a fairly representative entry, and the successes in the various classes were fairly evenly divided between the machines representing England, France, Italy, and America.

The first really important event to be held will be a road race, also to be run at Rome, called the Circuito del Tevere, followed by a hill-climb to be held at Parma on May 8th. Other important events are scheduled as follows:

An Italian Calendar.

May 15.—Circuit de Cremona. International road r...
" 29.—Circuit del Lario. International road r... the Italian Tourist Trophy.
June 12.—Circuit d'Orbassano. International r... race, 100 km.
July 10.—Circuit del Sestrieres. Reliability trial.
" 17.—Biella Oropa. Hill-climb.
" 31.—Coupe de la Consuma. Hill-climb.
Aug. 7.—Susa Mont Cenis. Hill-climb in conjunct... with the car race on the same day.
" 28.—Aosta to the St. Bernard Pass. Hill-cli...
Sept. 4.—Circuit de Brescia. International road r...
" 17-18.—Milan to Naples. Long distance tria... 900 km. in a single trip.
" 25.—Reliability trial for two-stroke machine...
Oct. 2.—Flying kilometre trials (international).

Most of the events have been approv... of by the manufacturers' unions recen... formed in Italy, and will, therefore, ... supported by them.

A selection of questions of general interest from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

FOR CANADIAN TRAILS.

My sons in Alberta are very anxious to have a motor cycle of British make, and I thought of a small two-stroke; but, as the situation of my farm is some three miles out of town, against the heavy gradient of prairie trails, which means cart-track over grass, and as the temperature in the shade gets up to 110° F., I have my doubts as to the suitability of this type. Will you let me know what machine you would suggest? We should not require a sidecar.—G.S.P.

or the kind of roads which you describe, we should advise you to have a achine of at least 500 c.c. with two or ree speeds. A lightweight machine ight answer the purpose, but the frame id wheels might suffer under such hard age, and it would thus prove more pensive to maintain than a heavier and ore solidly constructed mount.

BALANCING A V TWIN.

I have a little problem that I would be very indebted to you if you will solve it for me. I have a 50° V twin air-cooled engine which I am tuning up for speed. I am fitting light aluminium (Zephyr) pistons, which will necessitate rebalancing the engine. I know the weights of the pistons, gudgeon pins, connecting rods, crank pins, crank pin bosses for bearings, retaining nuts, etc. (1.) How can I calculate the required weight of the balance weight on the flywheels? (2.) For ordinary cast iron flywheels, am I right in assuming that a cubic inch of metal weighs 4 ozs.? (3.) Also right in assuming that the required balance weight varies in inverse ratio to the square of the distance from the centre of the mainshaft to the centre of weight? (4.) In a 50° V twin engine the pistons and connecting rods balance each other for 25° each side of the top and bottom dead centres, *i.e.*, for 100° out of the 360°. Does any allowance require to be made for this? May I say that I cannot just remove the difference in weight between the old pistons and the new ones, as the engine was not correctly balanced previously? —E.N.W.

.) It is usual to balance the whole of ie rotating and half the reciprocating ass. (2.) A cubic inch of cast iron eighs 4.16 ozs. (3.) The balance weight aries inversely as the distance (not the quare of the distance). (4.) No. See ie article in our issue of February 3rd.

POSITION OF LICENCE ON SIDECAR.

In the case of a sidecar outfit must the new licence holder be fixed to the sidecar, or can it be fixed to the motor cycle?—SUNBEAM.

The licence holder may be fitted to the motor cycle provided that it faces the near side of the road.

Important Dates.

Mon., Feb. 21st. to Mon., Feb. 28th—Paris Nice Trial.

Sat., March 5th—Colmore Cup Trial.

Fri., March 25th—Richmond Meet.

Fri., March 25th, and Sat., March 26th—M.C.C. London Land's End Trial.

Fri., April 8th, and Sat., April 9th—Western Centre A.C.U. Two-day Open Trial.

Fri., April 15th and Sat., April 16th—Ealing and District M.C.C. London-Holyhead-London 24 hr. Open Trial.

Sat., April 16th—Yorkshire Centre A.C.U. Open Hill-climb.

Wed., April 27th—A.C.U. One-day Trial.

Fri., May 13th, and Sat., May 14th—M.C.C. London-Edinburgh Run.

Wed., May 25th—A.C.U. Silencer Trial at Brooklands.

Tues., June 14th—Junior T.T. Race

Thurs., June 16th—Senior T.T. Race.

Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup

Wed., July 6th, and Thurs., July 7th—Arbuthnot Trophy Trial.

Sat., July 23rd—Motor Cycle Grand Prix Race in France.

Mon., Aug. 1st. to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

OVERHEATING TROUBLES.

(1.) I have a 1914 Triumph which overheats badly, although I give it plenty of air, and it is timed correctly. It has just been decarbonised. (2.) It is also very heavy on petrol (under 50 m.p.g.). It is fitted with a B. and B. carburetter, jet No. 27, and I ride solo. Is this the correct jet?—S.A.C.

(1.) Make sure that the exhaust valve is not closing early. It should not close until the piston has reached the top dead centre. Worn valve operating mechanism and excessive tappet clearance may account for the trouble. (2.) You do not give sufficient details to enable a full answer to be given; but it would appear that the jet is too small. Try a 32 jet. Remember that it does not follow that you will get the most economical running with a very small jet.

A MISSTATEMENT AS TO AGE.

On viewing a machine recently advertised, I was informed that it was a genuine 1918 model, and, taking the owner's word together with the advertisement, I decided to pay £25 deposit, and remit balance in a week or so. In the meantime I wrote to the makers, giving them the number of frame together with number of engine, asking them if that machine left their works in 1918. The reply was that it was supplied to the Russian Government in 1917. I have informed the owner to this effect, stating that I did not wish to go any further in the transaction. Can I reclaim the deposit?—J.K.

If the machine is not as stated on the receipt, there is no obligation upon you to complete the purchase. We should advise you to inform the seller that you cannot accept delivery, demanding at the same time that your deposit be returned. Should he refuse to do this, place the matter in the hands of a local solicitor.

CARBURATION AND OILING ON LEVIS.

Will you please inform me how to set the petrol level on my Levis machine? The carburetter is an Amac. I have been trying to set it to the jet top, but without success, as I cannot get it low enough. Should the petrol level be set to the jet top? I have heard that the level should be adjusted just below the top of the sprayer in the mixing chamber. Is this correct? I have been oiling on the petroil system, but as there is an oil tank and a three-way oil pipe to the cylinder and main bearing, I thought I might oil this way. Will it be satisfactory, or may I put less oil in the petrol and use the tank and pipes to provide the rest?—W.E.B.

The petrol level in the Amac carburetter should be $\frac{1}{16}$in. below the spraying jets and not below the regulating jet. The best way to set the level in this carburetter is to ignore the jet altogether and adjust the needle so that there is $\frac{1}{16}$in. up and down play between its split pin and the top of the float. This will give you the required petrol level. On no account use the petroil system on your machine. It would be best for you to write to the makers asking for their instruction booklet, which will explain the working of the Levis lubrication system.

A PLAIN CLUTCH WANTED.

I have a 1914 3½ h.p. V-twin machine with hub gear, of which the latter is not in good order, and wish to know if there is a clutch wheel on the market which I could fit in its place.—C.P.

Clutch wheels are no longer manufactured, and if the three-speed hub gear is not worth repairing, we should suggest that you replace it with a fixed wheel; and if you must have a clutch, fit either a Mahon free engine pulley on the engine shaft, or one of the Bradbury two-speed engine shaft gears.

LOWER GEAR NEEDED.

I have a W.D. Douglas machine, and although it is very fast on the level it will not climb freak hills. I live in a very hilly district, and have one hill, about 1 in 4, on which races were held before the war. A 2¾ h.p. Douglas won an event just before the war, but my machine will not go up at all. Can you give me any hints to get it better on hills? I have checked everything I can think of, carefully, and it seems correct. When I open up there seems to be a pop back as if the mixture is too rich, but I have tried all size jets and it makes no difference. I am wondering if the gears are too high. If so, how can I lower the gear. On hills about 1 in 8 to 10 I can do 30 m.p.h. on low gear by speedometer, but on steeper hills the engine konks out.—W.J.B.

As the performances appear to be good under normal conditions, evidently the machine is over-geared for freak hills, and we recommend that you obtain a sprocket for the flywheel with two less teeth than the one at present fitted. It is not likely that this will appreciably reduce the maximum speed on the level, and hill-climbing will be much improved. The sprocket is screwed on to the flywheel boss by means of a left-hand thread.

CHOKED RELEASE VALVE.

My 2¼ h.p. Velocette two-stroke is always very stiff to push when in gear, even with the release valve lifted. If the road is slightly greasy I am unable to make the engine revolve quickly enough to fire, though it fires at a very low speed. Also, the engine will run with the release valve lifted. Apparently, the valve is working correctly, but the compression is not completely released when it is operated. I fancy the trouble is due to carbon deposit in the narrow tube which conducts the gas from the release valve to the exhaust port. I have decarbonised the engine recently, and was puzzled to find a method of removing this carbon in the tube. (1.) Can you tell me whether the trouble is carbon in the small tube? (2.) How may I clear this tube of the deposit? —F.R.

(1.) It is quite likely that the trouble is due either to carbon in the passage connecting the release valve of the exhaust port, or to the release valve itself not lifting sufficiently. Take up the adjustment in the control cable, or shorten the latter if necessary. (2.) This tube is closed at the top by a set-screw. It would be advisable to write to the makers for their instruction booklet.

READERS' REPLIES.

UNDER-OILING.

As a novice, I hesitate to give my advice, but as my 1919 P. and M. outfit suffers from the same ailment as "A.G." complains of in the issue of February 3rd, I venture to suggest the cause of the trouble and its remedy. I find that, with a passenger, it is very unwise to attempt a speed above 30 m.p.h., for as soon as I cover more than five miles at, say, 35 m.p.h., the knocking occurs, and the only remedy is the low gear for half a mile and an extra cooler in the shape of a pumpful of oil. If such a thing occurs on the level it can only be expected to be intensified on a hill. The cause then is hard driving, and the remedy is obvious. In order to take an ordinary hill successfully, it should be rushed with air two-thirds and gas one-quarter open. Immediately the hill is met, reverse the levers, placing gas two-thirds and air one-quarter. At the slightest suggestion of reduction in revolutions gently reduce air and spark equally. I have been severely censured by more experienced riders for altering the spark at all, except in exceptional circumstances, but I find there is no knocking, nor is there overheating if this method is followed out. I have rushed my P. and M. on top gear with three up on a hill of 300 to 400 yards, with the steepest part of 1 in 10, and sailed away to the top.—J.A.

With reference to query from "A.G." in your issue of February 3rd on the subject of loss of power in a P. and M. with B. and B. carburetter and variable jet, may I suggest that if he still has the trouble, after satisfying himself that his lubrication is correct, the cause is possibly too weak a mixture. I have a 1920 P. and M. combination with Amac carburetter and W.S.R. variable jet. The jet opening needs to be slightly increased as soon as the engine warms up, or if the engine is pulling under any but the lightest load, for there is then great loss of power, knocking, etc., which a change down at once cures, as he describes. Manipulation of the air lever alone is not sufficient to effect a cure.—K.B.

REMOVING RUST.

My suggestion to "L.W." is that he sponge the bars (to remove rust) with either of the following pickles: Ten per cent. solution of sulphuric acid or twenty-five per cent. of hydrochloric acid, with a final sponge of clean water, and then polish with ordinary polishing material. T. A. McCreadie mentions a preparation for depositing nickel on the handle-bars. I should advise "L.W." that, unless all the old nickel is first stripped off the bars, he will not get a firm deposit, for it takes an experienced electro-plater to deposit nickel on top of nickel.—G. E. Jackson

EXPERIENCE WANTED.

"Pro Bono" (London, S.E.23).—A.C. Sociable under tropical conditions, or other air-cooled two-seaters in heat of India or Africa.

THE HIGHEST ROAD IN GREAT BRITAIN.

Although the majority of southern motor cyclists never get to Scotland for their summer tours owing to the distance, they invariably plan that some day they will visit this famous touring ground. Here is an Ariel outfit owned by a Workington rider who occasionally looks over his snap shots to remind him that all the bad stretches of road are not in his locality. The photograph was taken near the Devil's Elbow, 2,200ft. above sea level.

BRICO
TRADE MARK

A Rule that results in Economy--

Fit BRICO Piston Rings once a year and get the full power from your Engine.

HALF-POWER is the result of leaky piston rings—they soot up your sparking plugs, pit valves, and make your engine knock—they soak up oil, petrol, and money. Fit BRICO PISTON RINGS once a year, and your engine will develop full power always, because they are made of the highest grade of iron adopted as a standard for Aircraft Piston Rings iron having high tensile, high elasticity, minimum permanent set and great durability under working heat—iron that is exhaustively tested in both raw and finished state. Best also because BRICO Rings are perfectly round, and are tested to '0001 of an inch divergence before going into stock, so accurate that perfect compression is ensured. They are the perfected production of specialisation and standardisation—so good, that improvement is impossible.

There's a BRICO Ring for every Engine

in stock at all Dealers, Agents, and Garages

BRITINOL

The Trouble Saver

Every motor cyclist should include a "Britinol" Soldering Outfit in his Tool Kit. It is the most efficient and practical soldering outfit on the market. There is no mess or bother with flux or resin, "Britinol" is solder and flux combined in paste form, ensuring a clean, workmanlike job in a few moments. Used in the leading engineering workshops, and acknowledged to be the only soldering medium for high grade work. All accessory dealers should write for Trade Terms of this quick seller.

THE MOTOR CYCLE
Insurance Policy

Testimony

THIS space will be occupied each week with copies of letters from Policy holders who have made claims. Original letters may be inspected.

Gentlemen,

I much regret that it has been necessary to make this claim. I must, however, place on record my appreciation of the manner in which you have dealt with this affair without the slightest equivocation. I desire also to thank you for your efforts, entirely on your own initiative to get the repairs expedited.

My investment in a policy issued by you has been a distinct success, and your comprehensive cover—drawn up by motor cyclists for motor cyclists—should surely commend itself to that considerable section of the community, generally limited in means, who need the maximum value in return for their outlay.

I trust the day is not far distant when yours will be recognised as "The House" for Motor Cycle Insurance.

The only Safe Test of Insurance is Claims. We settle Claims promptly.

The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED.

(Incorporating The Autocar Insurance Department, Established 1904).

The London-Land's End Regulations.

NEW regulations for long distance trials are always a matter of interest to competition riders. Many feel that existing rules are not quite adequate and are apt to lead to bickerings. As a result, any innovation requires careful thought, for the results are often far-reaching and may even lead to the development of undesirable types of motor cycles. In the forthcoming London to Land's End trial, organised by the Motor Cycling Club, certain features have been introduced which call for comment. Following the precedent of the Club's London-Exeter trial, no adjustments will be permitted in controls. This is as it should be, for the modern motor cycle should be capable of a twenty-four hour non-stop run, except as regards replenishments, and the opportunity for minor adjustments is always permissible at the expense of time in unobserved sections.

It is in the regulations governing the most severe portion of the run, between Porlock Village and the top of Lynton Hill, that the real innovations occur. With the idea of avoiding possible difficulties in deciding what is and what is not a clean climb, time limits have been set for two sections, which is a good feature, provided the limits are sufficiently carefully calculated.

The first limit covers the three miles subsequent to the Ship Inn, Porlock, and includes practically nothing but the famous Porlock Hill. A minimum limit of 18 m.p.h. is specified, and this should not worry seriously solo machines over 350 c.c. Small two-strokes, however, will be hard put to it to maintain this speed, and the average medium-powered sidecar outfit will have to be in very good trim. Added to this, the surface of Porlock Hill is often remarkably greasy, and wheel spin on the severe gradient will cause even the bigger passenger machines some difficulty. The second debatable condition is to the effect that no one shall be more than five minutes late at the top of Lynton Hill. This implies an average speed of approximately 18 m.p.h. over rough and narrow moorland roads, *down Countisbury Hill*, and up Lynton Hill. If all goes well the average is not too high; but new competitors who do not know the country should be warned that the long and narrow descent of Countisbury is highly dangerous, and culminates in a sharp pitch near the foot, which has been the cause of more than one serious accident.

It is not often we find ourselves at variance with a sporting body such as the Motor Cycling Club, but in this instance we feel insufficient distinction has been made between machines of widely differing powers, and that the average speeds may be too high for safety under adverse weather conditions.

Fostering Club Life.

AT a period when, to many people, the times may appear to be suddenly out of joint, there may be some tendency for all but the utilitarian side of the motor cycle movement to be placed on one side. Such a policy, especially on the part of club officials, is rather short sighted, for the practising of economy by the curtailment of a healthy recreation is unwise; moreover, the truth of the saying that "once a motor cyclist always a motor cyclist" must not be forgotten.

In club circles, for instance, there is no need for a curtailment of programmes or the adoption of a spirit of resignation if events are not supported with the usual enthusiasm. Rather let trials secretaries absorb the duties of social organisers where the latter officials do not already exist especially; if the average member at the moment is disinclined to join in extensive trials which necessarily involve expenditure of time and incidental sums, let the club programme be adjusted to suit circumstances. Social runs, runs with an object, outings to places of local picturesque, historical, or archæological interest are well worth taking; they serve to keep the members together, to strengthen mutual good feeling, and to cater for a class which either cannot or will not muster up enthusiasm in competitions.

An index to the advertisements in this issue will be found on the page facing the back cover.

Occasional Comments by "Ixion"

Greasy Camber, and a Pillion Flapper.

I APPRECIATE no items in my postbag more heartily than the—usually unprintable—letters which I occasionally receive from keen amateurs on whose toes I have trodden. The causes specified in my cross-heading have brought me a breezy letter from a damaged enthusiast, who is familiar with all the machines which I rode in 1920. He waxes extremely merry at my remark that a Scott is not easily left, even by a Norton; but he doesn't know the roads of which I spoke. He considers I have a bee in my bonnet about the A.B.C., which he prefers to formularise as follows:

$$X + Y = Z$$

when X is high revs, Y is small bearings, and Z is wear. (Happy thought: express some of my own childish notions in this learned form, chucking in a few surds and *n*th powers to fog the innocent.) When his broken limbs have calloused up integral once more, he proposes to sniff the ozone on an I.O.M. Rudge, which, he assures all and sundry, is *the* goods.

More About Electric Cables.

MY next letter is from a No. 8 hat, and has given me a headache. He thinks less than nothing of the merchant who impressed me a few weeks ago by talking in thousands of megohms; apparently, there might have been something in it if he had said millions. Anyhow, his prescription for a care-free existence with electric lighting on car or cycle is to scrap the lot, as Jacky Fisher put it, immediately on receipt. Then go to a cable company, and get them to make up multicore wires with (*a*) conductors of forty No. 33 s.w.g. wires, insulated with (*b*) pure vulcanised rubber to a diameter of .7 mm. finally (*c*) covered with cab-tyre sheathing. I gather that if you put the charge of a Pacific thunderstorm down these cables when they were submerged in water, they would still function merrily. Incidentally he bids me beware of the jute packing advised by another correspondent; it has a spongelike love of water, and soon shorts.

Rust Prevention and Cure.

AT Smethwick, in Staffs., there is a firm known as T. Howse, Ltd., which specialises in chemical dopes and appears to enjoy a high reputation in technical circles of a more august character than those which I frequent. Its top man, or "big shout," as the Yankees would call him, has a curious psychology. Some while ago he wooed me with a sample bottle of some stuff called Corrosine, guaranteed to prevent rust; it was quite good, too. Now he has weighed in with another bottle of dope called Derusta. It is much as if an evangelist were to offer you with one hand a safe passport to the golden gates, and with the other hand an asbestos suit in case you missed your way. My latest motor cycle being only a week old, the times weren't quite ripe for a routine test of Derusta. But in my madder moments I play golf. [We shouldn't call it that.—ED.] My clubs have lain in a damp shed since 1914. I selected a favourite driving iron, and anointed it with Derusta. Being of a trustful disposition, I was much disappointed. I expected to hear a rending sound and to behold all the orange excoriations peeling off incontinent. They didn't. I massaged the clubhead gently with Derusta for five minutes, and at the end of that period it became possible to decide that the metal had originally been white and not red. From which I deduce that Derusta would do good work on a motor cycle which had lain neglected in a damp shed for some months.

'Ware Petroil on Scotts?

MY recent note on petroiling a Scott has brought me a lot of correspondence. The firm have no objection to the petroil system, but advise that an occasional pumpful be ejected *via* the drip feeds for the sake of the bearings. But a correspondent who has tried the system says it made him wish the originator into a place where petrol does not keep. It began by choking his carburetter; it then fouled the petrol tap filter; and finally it made such a mess of his transfer port gauzes that he had to cleanse them with a blow-lamp, and finally buy a new set. As it happens, I did not make this experiment until just before I parted with my Scott; using a thin, filtered oil, well mixed with petrol before insertion in the tank, I experienced no trouble of any kind. Some months later the purchaser enquired whether I would like to buy the Scott back.

Insurance.

RECENTLY in these notes I suggested that the following principles should govern our economies in an outlay which has become very expensive.

(1.) Every motor cyclist should be fully covered against "third party" risks in the interests of himself, his dependants, and any persons whom he may chance to injure. (For a man of limited means to burden his own shoulders with risks which may exceed £1,000 is criminal folly—there is no other name for it.)

(2.) Whether we insure the machine itself or not is a matter of taste. (It is a pure gamble. Can we replace it, if burnt to the ground? Would we rather face this rather remote peril, or part with the necessary premium?)

(3.) Whether or not we insure ourselves against personal injury is a question to be settled by the effects which two months in bed or permanent crippling would have on our homes and business. If it is wise to obtain this protection, we ought probably to cover ourselves against general accidents and sickness; in that case motoring accidents may be included in the "personal" policy and excluded from the motor cycle policy.

INTO THE TEETH OF THE STORM

The Ascent of the Rugged Llanberis Pass against a Gale.

IT was at Conway that we put up for the night after a pleasant run without special interest or excitement from the old city of Chester. The road along the borders of the Dee and then of the opening sea would be far more dreary and uninteresting were it not for the vision of better things that lures one on. Comparatively level and of average surface, it neither gave us the opportunity of doing things or seeing things, and, the weather being quiet and the sky monotonously overcast, we found nothing to excite the spirit of adventure; certainly nothing that in any degree could be regarded as a forecast of the programme that was to be unfolded ere the little tour was finished.

We had ample time for a jaunt to the Great Orme, and were in time to see the sun conquer the gloom of the evening clouds and send its fires across the sea

The whole heavens were on fire: it seemed that streaks of molten metal were being poured from an unseen cauldron, till the sparks burst upwards, their light trailing away in half-seen luminous wreaths that curled and flashed behind a screen of glowing gauze.

We slept that night the sleep of weariness and peace, and so we woke refreshed; and the clear sun shone radiantly in the opened window; but it was the clearness that speaks of a sky-way washed by the rains of night; and white lines streaked the clear blue sea away to the northern horizon.

A Freshening Gale.

By nine we were on our way along the coast road of North Wales, and the wind was wrestling to impede our progress—a pure, fresh wind, that banished all ill-humour and called forth the highest and the best. At first a merry, playful thing, it soon became too persistent for playfulness, and it was evident that it was only testing our courage, and was prepared to do better later on.

(Left) There are not many motor cyclists who, frequenting North Wales year by year, do not eventually get caught in a storm in the passes. Pen-y-Gwryd Hotel, just beyond the summit of Llanberis Pass, has on scores of occasions proved a welcome stopping place after a tussle with a gale.

(Right) A scene in Llanberis Pass

A Road Test in the Foothills of the Alps.—

lake side. The weather cleared a little and a most magnificent view was unfolded. Huge hills on all sides, and above them the Alps, towards which I was heading —a more ideal testing ground could not be imagined.

I took advantage of a respite in the weather to try a "speed burst." The pick-up was rapid, and 50 m.p.h. was reached with ease, but as I was on an unknown road and the visibility was low, I did not exceed this, although there was power enough in the engine had I required it. Nor, I may say, did I keep it up long, which was lucky, as in a few minutes I met a herd of bullocks. This gave me an opportunity for some clutch work, as the brigand in charge of the brutes refused to take any notice of me. The action of the clutch was sweet, but I would like an auxiliary clutch pedal. This, however, is merely a matter of opinion, as many motor cyclists prefer handle-bar control for such occasions.

Where the Moto-Guzzi is made—Mandello, on Lake Lecco, a branch of Lake Como. The snow-clad peak in the background is Monte Grigna.

Had the weather been anything like fine I should have made the Swiss frontier at Castasegna or Tirano, but, as it was, the head of the lake was my turning point. From this point the Alps were obscured, and the surrounding country was remarkably like the Loch Lomond district near Ardlui. The rain was almost Scotch in its intensity, but the little pink villas brought one back to the Sunny South.

There was no serious hill on the route, but, what hills there were, the machine took in its stride. It has been on the road for over two years, and had about 8,000 miles to its credit, but it pulled like a 1921 machine.

G.S.M.

MORE TAXATION ANOMALIES.

ANY fresh legislation seems bound to produce anomalies and hardship to some of those affected, and this is particularly so when motors or motor cycles are the subjects of that legislation. It is very big odds against the man who drafts a new regulation concerning motor cycles being himself a motor cyclist; and it seems almost impossible that either he or his advisers should be cognisant of all the ins and outs connected with the pastime.

A reader who signs himself "Auld Reekie" points out two glaring anomalies upon which he has sought the guidance of the Ministry of Transport. The Ministry's reply through the local taxation officer is also appended. The points in question were: (1.) "What licences require to be taken out by a person owning two identical machines, but only one sidecar attachable at will to either? (2.) In the event of an owner of a sidecar outfit selling the sidecar, would a refund be made to him by the authorities for the unexpired portion of the year?"

The reply goes as follows:

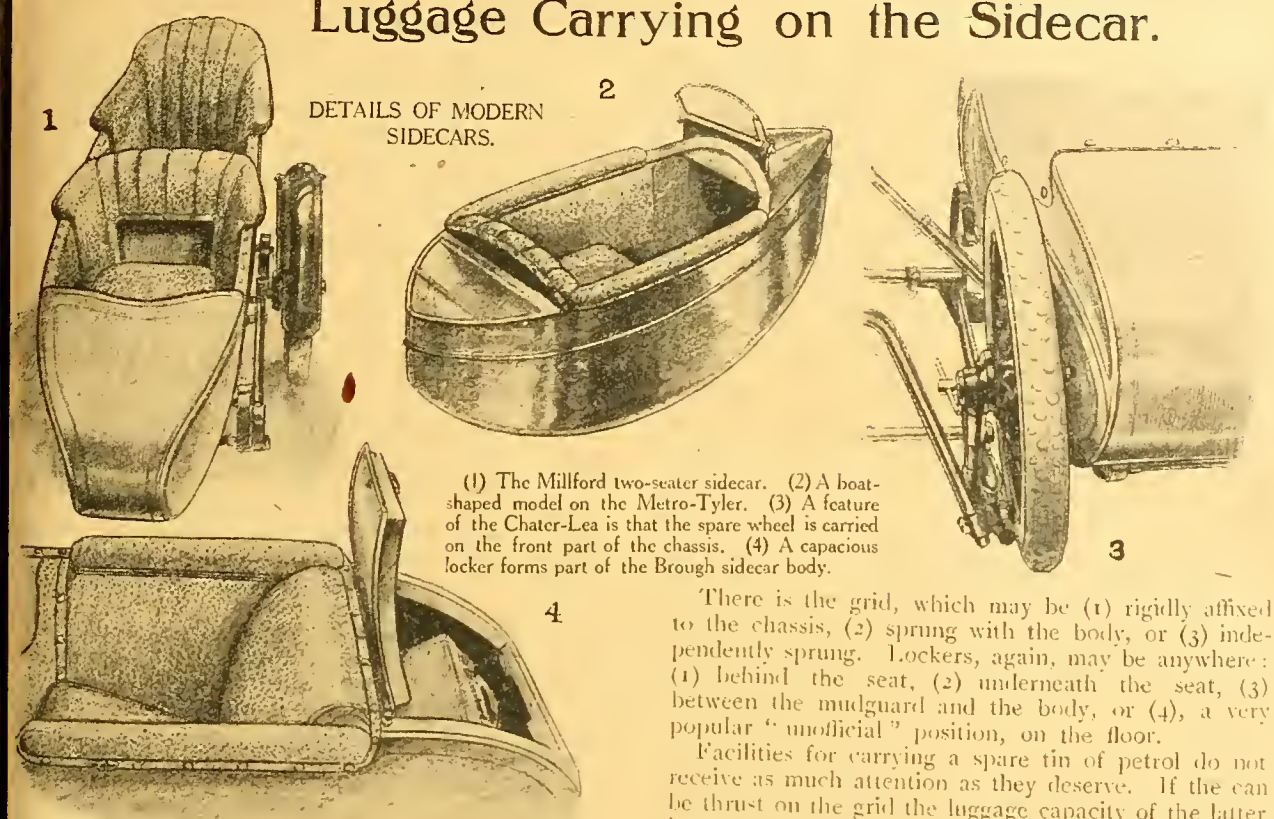
"The Secretary of the Ministry of Transport has forwarded to me a copy of your letter to him on the subject of rating for duty on sidecar used alternately with two Triumph motor cycles, and also on your position relative to refund in the event of your selling your sidecar.

"I have to state that the Ministry is of opinion that if any person uses the same sidecar attached at different times to two motor cycles, he must pay an additional sum of £1 in respect of both motor cycles. With reference to the second query contained in your letter, in the Ministry's opinion a refund would not be payable under the circumstances mentioned."—LOCAL TAXATION OFFICER.

Comment is needless.

INSTRUCTION IN TWO-STROKE MANAGEMENT.

DESPITE the fact that two-stroke engines have held a prominent place in the motor cycle movement for the last ten or eleven years, specialised literature regarding this type of power unit has been particularly unfertile.



The enquiring novice who wanted practical instruction in the whys and wherefores of management has been almost entirely limited to the two-stroke chapters of such handbooks as "Motor Cycles and How to Manage Them," which, although excellent in their way, have necessarily not exhausted the possibilities of the subject. An effort to produce something on satisfactory lines has borne fruit, however, in the handbook* now under review. The work of the staff of *The Motor Cycle*, it embodies all that is accepted and trustworthy in the discussion of two-stroke possibilities as applied to motor cycle practice, while the instructional chapters, which cover such ground as "Getting the Best Results on the Road," "Tuning Up," "Tracing Troubles," and "Cleaning the Engine," have been compiled by writers who have used and appreciated two-stroke motor cycle engines from their inception. Innumerable hints and tips will enable the inexperienced rider, puzzled by some minor defect, to search all possible causes of trouble, and then, the secret of his difficulty being revealed, to rectify it in the easiest possible way.

To those who are interested in the development of the two-stroke, the chapter on past and contemporary designs of more unconventional nature than their fellows, and the final notes on the technical aspects of the two-stroke, will repay careful study.

* "Two-stroke Motor Cycles." Price 3/-. by post 3/3. Iliffe & Sons Ltd. 20, Tudor Street, London, E.C.4.

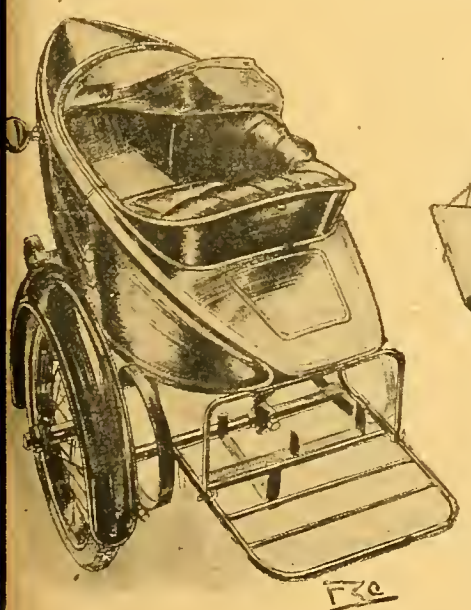
Luggage Carrying on the Sidecar.

DETAILS OF MODERN SIDECARS.

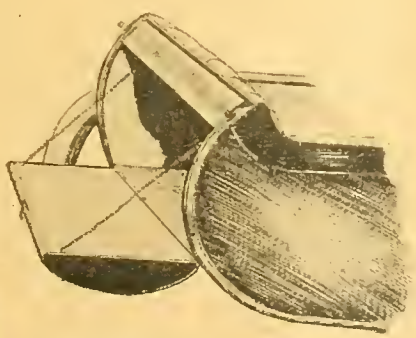
(1) The Millford two-seater sidecar. (2) A boat-shaped model on the Metro-Tyler. (3) A feature of the Chater-Lea is that the spare wheel is carried on the front part of the chassis. (4) A capacious locker forms part of the Brough sidecar body.

WHILE automobile bodywork has become more or less standardised in recent years, sidecar design, and more particularly sidecar coach-work, follows no distinct fashion.

Probably no two sidecar chassis are entirely alike, and no two sidecar bodies bear more than a faint resemblance to each other. Naturally, therefore, luggage-carrying arrangements are presented in a variety of forms.



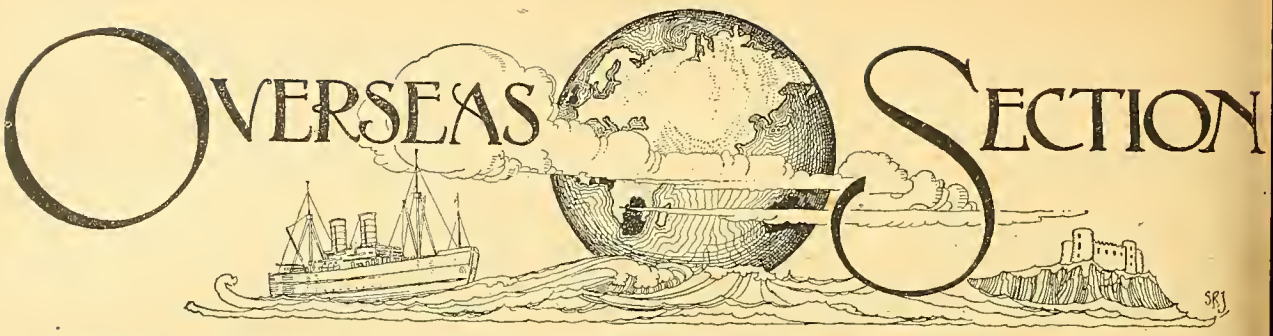
There is the grid, which may be (1) rigidly affixed to the chassis, (2) sprung with the body, or (3) independently sprung. Lockers, again, may be anywhere: (1) behind the seat, (2) underneath the seat, (3) between the mudguard and the body, or (4), a very popular "unofficial" position, on the floor.



Facilities for carrying a spare tin of petrol do not receive as much attention as they deserve. If the can be thrust on the grid the luggage capacity of the latter is greatly curtailed; the same may be said of the locker position. But many bodies nowadays have some pretensions to a streamline tail and, where a special carrier is not incorporated with the sidecar chassis or luggage grid, the flat top portion of the tail in question makes a very suitable anchorage for the spare two gallons of spirit.

Even if a special position is provided there is no reason why this tail area should not be padded with rubber and railed in, as on the Sheffield-Henderson and B.S.A. At some time or other in the sidecar's career the extra luggage space afforded will be more than welcome.

On the more luxurious outfits the position of the spare wheel is another unsettled question—almost "problem," for the beauty-experts of the automobile body world discovered, some years ago, that a loose wheel at any angle or fixing does not tend to enhance appearance. Even now, however, sidecar bodies are barely commodious enough to adopt the neatest car expedient of stowing the wheel away in an entirely concealed compartment.



Probably about the same time in the future as unpuncturable tyres come into general use, one fixing and position for the detachable wheel will be universal; but at present we must rest content with various compromises.

(Right) The rear locker of the Chater-Lea sidecar.

(Left) Although a sporting model, there is ample luggage accommodation on this gracefully designed Zenith sidecar.

Commentary based upon Practical Experience and a Study of Overseas Opinions.

Service.

Now that most British motor cycles are in every way suitable for the needs of the Overseas buyer, fewer letters reach us setting forth "ideal specifications." Before the war such helpful suggestions were a feature of our postbag. Among the subjects upon which our correspondents now base their useful criticisms one stands out above all others. We refer to the question of a ready supply of spare parts, in short "Service."

Many times we have given prominence to this subject because we feel that until Overseas riders are able to obtain replacements for British machines as promptly as they can for those manufactured in America, British motor cycles will not secure their full share of popularity.

The service of American makers has often been quoted as an ideal for British makers to equal or emulate. Ideals, however, are not always practicable, and in this case the conditions anent American and British motor cycles are by no means identical.

American motor cycle manufacturers can be counted upon the fingers of one hand, but fully a hundred makers share the Overseas trade from this country. During the war, the U.S.A. products were able jointly to establish themselves in our Overseas Dominions, with the result that there are now in use sufficient machines of two or three makes to justify the expense of a very complete spare parts service.

It would appear that in the past the British motor cycle industry has considered that since it is impossible to organise "service" on the lines of their American contemporaries, there is nothing more to be done in the matter, instead of forgetting what has been done by U.S.A. makers and attempting to solve the problem which would still exist even if no American motor cycles were in use overseas.

❁ ❁ ❁

Solutions to the Problem.

THERE are several solutions, each worthy of consideration, but first of all British motor cycle makers must cease to regard their productions in the same light as commodities which, when worn out, are replaced by new goods. They must consider potentialities which accrue from usage. If the life of a motor cycle be taken as ten years, then it is in the interests of the maker to provide for the needs of every owner who is likely to use that machine.

The following are some of the ways open to provide spare parts service for British machines:

(1.) By syndicated representation by means of central depots in each country financed by groups of manufacturers.

(2.) By central depots organised and financed by a new branch of the Manufacturers' Union.

(3.) By private enterprise.

Regarding the last mentioned method, it is passing strange that Overseas towns have not concentrated upon the spare parts business such as has proved successful in the Home Country. Surely, if spare parts can build up a big business at home, there is a wonderful scope for houses working on similar lines in India, Africa, Australia, and New Zealand.

❁ ❁ ❁

Co-operation Necessary.

WITH the co-operation of the manufacturers, agents should be enabled to carry a reasonable stock of spares for the makes they represent, while in the more important centres quite a trade should be available in spare parts for the leading makes in general use in the district. In certain of the Overseas Dominions large importers of complete motor cycles are carrying stocks of spare parts for the machines in which they specialise, but taken on the whole this branch of the business has not received the attention due to it, partly, no doubt, on account of the necessity to lock up a large amount of capital for two or three years.

❁ ❁ ❁

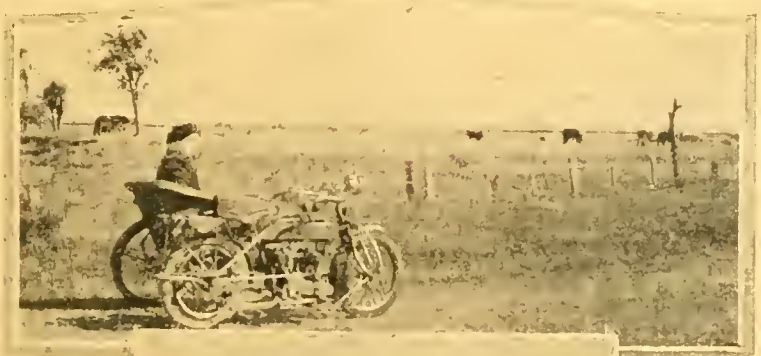
Encouraging Overseas Trade.

THERE is every evidence that manufacturers are more seriously making a bid for Overseas trade than ever before, and no opportunity is being lost to regain their footing in those markets which have been more or less neglected since the war.

The British Industries' Fair, which opened this week simultaneously at London, Glasgow, and Birmingham, is well supported by members of the motor cycle industry, and, as a number of these firms exhibited last year, this fact may be taken as evidence that they have found the Fair profitable.

As on the last occasion, the Fair is purely a business proposition, *i.e.*, a place where buyers from Overseas and sellers can meet, and where the former can in a very short time examine lines of commodities produced by many manufacturers. There are no side shows or amusements, as is the case with the usual exhibition, and the catalogue is printed in three languages.

The presence of such commodities as motor cycles and accessories must be the means of interesting new buyers for these goods. In addition, trade buyers of goods outside the motor field are personally interested in motor cycles, so that Overseas traders should benefit materially from the visit to this country of their countrymen.



A Selection of Letters from Readers scattered all over the World.

In Baghdad.

Over the signature of "GHALBA," a military correspondent ith the forces in Baghdad sends us the following account conditions in that city:

"*The Motor Cycle* is a very pleasant connection with me even if it does sometimes cause attacks of home-ckness when thinking of what machine to buy on our turn. However, there will be at least one more Show mber before that comes off.

"This is not a motor cyclist's paradise; in summer it not so very bad, though it is hot, dusty, and bumpy—t now even 'Ixion' would rather walk on some roads. he rain will not soak in, so all the unmetalled roads nsist of a mass of hard bumps and ruts covered with incredibly slippery surface of clayey 'mud.' I have en an R.A.F. tender which could hardly keep on the ad at 5 m.p.h. To eet this sort of thing e chief motor agents Baghdad display in eir plate-glass win-w (the only one in e city) the *T.T. rect belt drive model* a famous maker, hose 4½ h.p. model ould be almost ideal r the country. Need-s to say they seem have reposed in the i n d o w for some nths now. I rather ink a two or three-ed lightweight for vn use only would l as well as anything re. In the summer there used be several ex-W.D. Douglases den by prosperous-looking ntlemen clad in spotless white ll and a fez. This kit would look ther well in the Six Days!"

IN THE HIGHLANDS OF NEW ZEALAND.

A King Dick outfit which our New Zealand correspondent has had in use for three years. The photographs convey a good idea of the fine scenery in the North Island. Both pictures were taken at the southern end of the Kaimanawa range of mountains, among which run fairly good motoring roads.

"Owner Going Abroad."

MR. JAMES OSCARD, writing om Karachi, gives his experi-ces in taking his own machine India. He also emphasises the tremely low figure at which erican motor cycles sell out ere:

"*The Motor Cycle* of December ue is to hand, and I am inter-ed in your correspondent's marks under above heading. rhaps my experience taking a Triumph idecar outfit to India ll interest him and ers who contemplate ing to India.

"I found the best n was to entrust the chine to the makers. ese people do their n exporting, or have ir exporters, and is 'know the ropes.'

"My machine was mantled, packed, in-ed, and put on ard, for quite a minal sum. The chine arrived safely Bombay one month er, and the total t was, with shipping es, etc., £21 9s. 3d. e Customs duty is % on the value of e machine.

"In the writer's opinion, however, one would do better to sell the machine in England and purchase a new machine in India. Good American big twins and fours are quoted as low as £125. The motor stores out here to-day are crammed full of British machines, too, especially two-strokes. Whilst British machines are very popular here, one cannot help but notice the wide popularity of the Americans, especially the Henderson (four-cylinder). When one considers that a four-cylinder machine can be bought for £125, as against £150 for a good 'single,' one can well see why this is so."

Italy and Exchange Difficulties.

An unfavourable rate of exchange is "G.F.H.'s" reason why there is no large export trade to Italy. He writes from Milan as follows:

"At present the position of the exchange is still greatly unfavourable to a large export trade in motor cycles from England to this country. At the present very high rate of exchange, a good English sidecar outfit, such as a Sunbeam or A.J.S., costs, delivered here, nearly as much as a good light car chassis (such as the Bianchi model 15 fitted with electric lighting and starting equipment). You will, therefore, understand that it is almost impossible to expect large orders from this country under the present conditions. If British manufacturers are really anxious to export on a large scale, they must study some means of overcoming the exchange difficulty, or otherwise business will be very slack."

Impressions from Swaziland.

MR. R. T. MACDONALD, Swaziland, writes:

"I trust you will excuse my picking a bone with you. In reproducing a few of my statements in *The Motor Cycle* of September 30th (Overseas Section), you have erred slightly to the detriment of my 'bus. I would not mind so much, but for the fact that a couple of African motoring papers copied your reproduction.

"First, I never ride solo, road surfaces and gates being troublesome, and comfort a primary consideration. My consumption of 90 m.p.g. was *with sidecar, passenger, and a considerable amount of luggage* (including six gallons of petrol and two of oil). I have several times exceeded 60 m.p.g., but normal running with many starts a day rather spoils the average.

"My actual statement with regard to 'spares carried' was to the effect that one cover (for rear wheel) and one main driving

Overseas Section.—

chain were my only spares since acquiring the outfit. (This is picking a bone with a vengeance, as I happen to carry a cover and tube habitually.)

"As a comparison. To travel from here to Johannesburg by the ordinary way—by post car to rail head (eighty-two miles) for two persons and luggage, £25; rail to Johannesburg about £5; total £30 to £40. By motor cycle and sidecar—petrol 6s. 6d. per gallon at 60 m.p.g. = nine gallons the double journey comfortably, £2 18s. 6d.; oil, 10s. 6d.; four days travelling there and back, twelve meals at 2s. 6d. = £1 10s.; two beds, 5s. (one person). For two persons, therefore, to Johannesburg and back, £6 19s.

"I think this emphasises the need for motor cycles and sidecars as a means of transport."

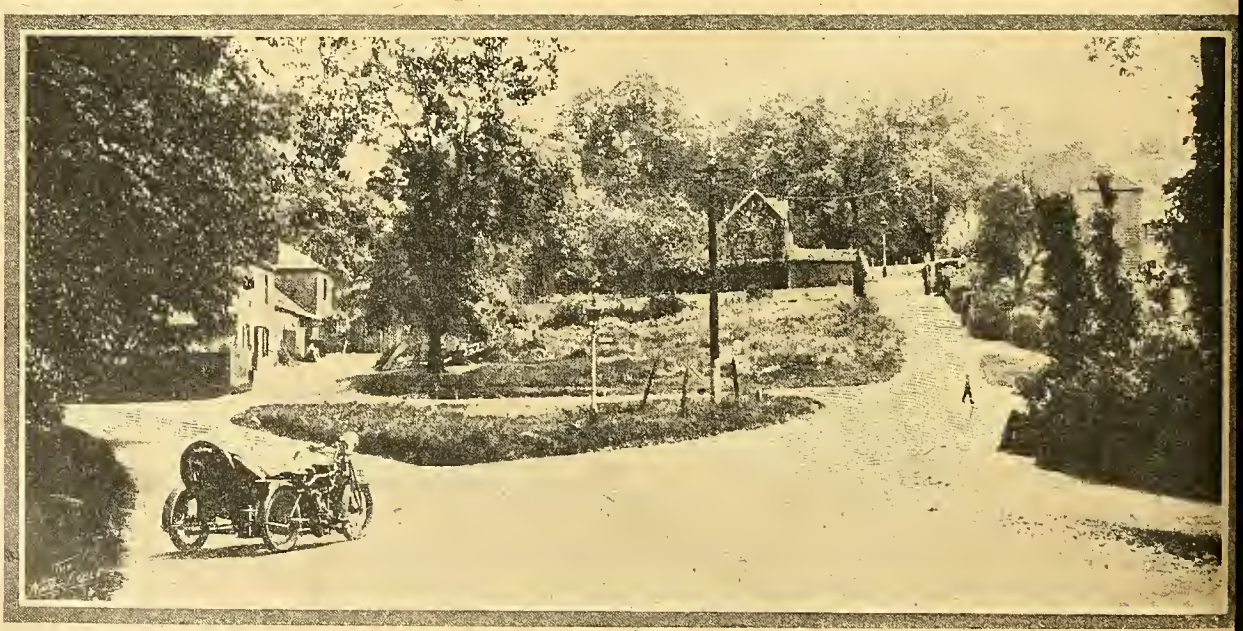
Advantages of C.O.D. Payment System.

Writing from Nawalapitiya, a reader who signs himself "CEYLON," supports a recent correspondent who advocated that spare parts should be sent by the "C.O.D. Post" system.

"A little time ago," he states, "I decided to get some spares for a well-known gear box, and so wrote to the makers. Not knowing the price, I asked them to send the goods C.O.D. post. After some delay I received a reply in the shape of a *pro forma* invoice, stating goods were ready for despatch, and would be sent on receipt of cash. This would have meant a further delay of at least a couple of months, before spares came to hand. In consequence I wrote and told them I would not take the spares. As it happened I was not in immediate need of the spares in question, getting them only in case of wear of parts, or emergency; had I required them urgently, it would have been most annoying.

"I know of other instances of the same treatment. I am open to correction, but I thought that manufacturers and others had been asked to stimulate overseas trade by the Government, and the C.O.D. post had come into operation more or less for this purpose."

Motor Cycle Spares Service.



What may be Done by Private Enterprise. An Example at Home as a Pointer for Overseas.

THE most frequent and persistent complaint which reaches us from our overseas readers is that British machines do not accrue their full popularity abroad because they are not backed by efficient spare parts service.

Granted that British makers remain apathetic, it would still appear that the overseas retail trade remains blind to the possibilities which exist in specialising upon spare parts business. Wherever more than one or two machines of a make exist, there is a potential demand for replacements for those particular machines and a stock, complete and well chosen, will not only be drawn upon constantly, but will have the effect of drawing further machines of the same make into its vicinity—the owners feeling secure in the knowledge that they are insured against the delay entailed by the collapse of an essential detail only to be replaced by a tedious application to the parent factory.

That a highly satisfactory business in spare parts may be built up has been demonstrated at home in more than one case, and if a private firm can establish an almost world-wide business when located very close to the actual maker's works, surely there is still more scope for the man who establishes a comprehensive store where private riders have no means of immediate access to the parent factories.

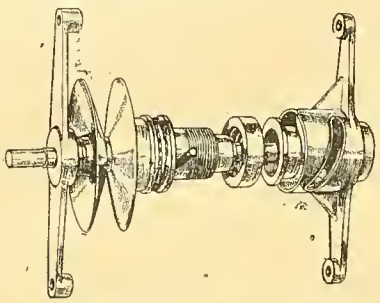
We have in mind particularly the example which has been set up by Messrs. Herbert Robinson, Ltd., of Cambridge. Here we have the management of a provincial garage and repair business realising the existence of a continuous and certain demand for prompt spares service. Well equipped storerooms were furnished, a special staff detailed, and judicious advertising campaign inaugurated. The results have surprised even those responsible for the scheme, and the firm is now receiving orders for spares, not only from all parts of the British Isles, but from almost every place abroad where British machines are used. Complete stocks of parts for all Douglas, Triumph, J.A.P., Villiers, and Sturmey-Archer manufactures are maintained, and separate illustrated price list for each are available; approved credit accounts are opened, and orders on these as well as those covered by remittance are filled on the day of receipt. This businesslike method has resulted in ever growing orders and it appears abroad there would be even greater scope than at home. This is proved by the fact that Messrs. Robinsons receive a large proportion of orders from overseas

Although but ten miles from the metropolis, Mill Hill still retains some traces of the days when it was a "sleepy hollow."

What it Costs to send a Motor Cycle Overseas.

A Schedule of Inclusive Packing and Freight Charges, and Details of Import Duties in Various Countries.

(Compiled by Messrs. Davies, Turner & Co., Ltd., Lime Street, London, E.C.)



Name of Country to which the Rates and Duties Apply.	These Duties are Compiled from Official Sources, but without responsibility. %.= per centum ad valorem.	Port.	Rate per One Motor Cycle. £ s. d.
ANTIGUA (B.W.I.)	Under the British Preferential tariff, 10⅔% ad valorem	St. John's	8 5 0
	Under general tariff, 13% ad valorem		
ARGENTINE (South America)	32% of the valuation of 100 pesos each	Buenos Aires	8 17 9*
		Montevideo	8 17 9*
AUSTRALIA	Under the British preferential tariff, £10 each, or 25% ad valorem. (b) Under the general tariff, £12 each, or 30% ad valorem.	Adelaide	8 9 9

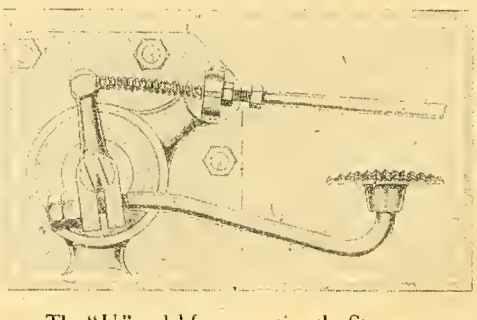
WINTER WORK IN THE GARAGE.

Some Conversions and Adaptations that will Improve or Modernise Existing Machines.

NOT all motor cyclists appreciate the joys of winter riding, and those who do not object to laying up their machines for a week or two have open to them a wide field of activity in the garage.

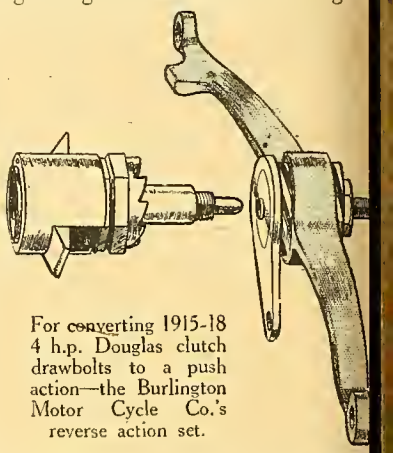


Component parts of the Grado pulley, illustrating the simplicity of this type of gear.

Renovations and overhauls form the generally-accepted procedure at this time of the year, but there is no reason why owners, particularly owners of old machines, should not go one better, and, instead of contenting themselves with renovation, endeavour to improve and modernise their machines and so improve their value.

Apart from the general tightness of money, and consequent inability to obtain a new mount, many motor cyclists have an affectionate regard for their old motor cycles, and an unvoiced opinion, sometimes based on fact, that there is little to choose between pre-war and post-war engines. Some go even further and stoutly declare that their 1913 XYZ is a better puller and has better material in it than its 1921 prototype.

Often, however, the "old love" is single-geared—clearly a case for conversion.



The "U" pedal for converting the Sturmey-Archer clutch to dual control.

Bottom bracket design and various constructional details prevent the majority of proprietary countershaft gear boxes of to-day from being fitted to fixed gear mounts of six to ten years ago, but there are several variable gearing devices that are specially marketed for this work. some are already well known, but one or two, that are not widely advertised, are probably not so familiar to the majority of our readers.

The Philipson pulley is so linked with the T.T. type of machine that its advantages to the tourist are somewhat neglected. It simply consists of a variable pulley which may be opened at will by hand or foot control, with the additional property of automatically lowering the gear ratio when the engine commences to labour. Most existing machines with direct belt drive usually may be readily fitted with this device.

Also on the variable pulley principle the Grado gear may now be obtained in a countershaft form, supplied with a detachable starting handle, and particularly suited to single-geared lightweights.

For converting 1915-18 4 h.p. Douglas clutch drawbolts to a push action—the Burlington Motor Cycle Co.'s reverse action set.

Other variations of this gear include a hand-lever operated engine-shaft pulley with or without a kick-starter. It is claimed for the Grado pulley that, however slack the belt, the inner flange of the pulley exercises a gripping stress that effectively prevents any possibility of slip. Two hours is the time that the makers calculate as necessary to fit the countershaft model.

There are at least two more well-known variable pulley gears sold as separate units that must not be forgotten. The "Pneu," manufactured by the Pneu Auto-Pulley Co., 22, Bassborough Road, Birkenhead, ranks among the very simplest of these devices; but the Mabon gear, sold by the Mabon Motor Works, Woodside Gardens, Bruce Grove, Tottenham, N.W.17, is also popular in its ball bearing countershaft form, when it is fitted with a tank lever control.

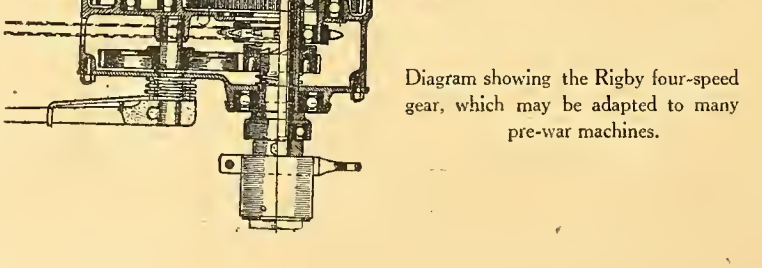


Diagram showing the Rigby four-speed gear, which may be adapted to many pre-war machines.

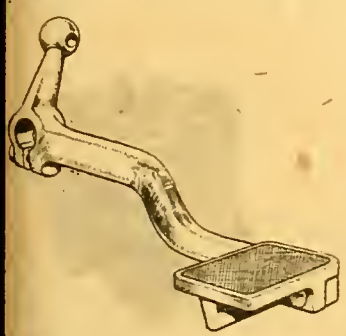
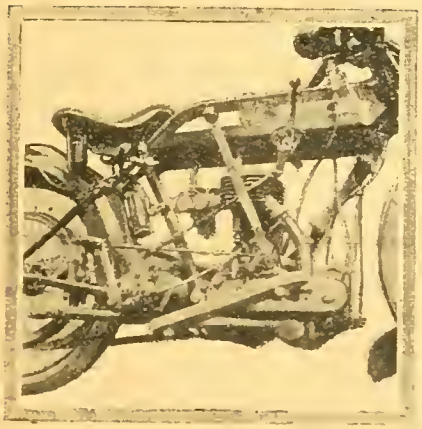


Those who require something more elaborate are catered for by several gear boxes people, notably Messrs. Knowles and Ramsbottom, Coddington St., Blackburn, who make the Rigby or Simplex two and four-speed gears, especially for single-geared

Winter Work in the Garage.—

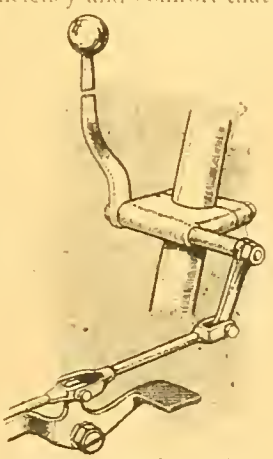


machines of pre-war manufacture. The two-speed model is on the expanding clutch principle, while a very interesting four-speed model combines this principle with a dog clutch box, giving two further ratios. Thus, on the latter type there are two direct and two indirect drives, and a simple kick-starter has now been incorporated. Both models are well designed, well made, and thoroughly sound propositions, and we should imagine that, say, an old Triumph (*circa* 1910) should be a very fascinating mount when equipped with either. The conversion in such a case is a simple task to a good mechanic.

Suspension is another item which might receive attention by the owner bent on improving his old machine. L.M.C., Flexa, and Mabon spring seat-pillars (all described previously in these columns) may be readily fitted to existing motor cycles, and are undoubtedly very efficient substitutes for a fully sprung frame.

So many ex-W.D. machines are there on the road nowadays that it is not surprising that special attention is being given to various details that tend to bring such machines up-to-date. A clutch-operating conversion set for 1915-1918 4 h.p. Douglases is a typical example of a small but very neat modification, which mainly applies to ex-W.D. models. It eliminates the draw bolt, which, unless carefully used, was rather apt to give trouble, substituting a short stiff push rod. At the inside of this rod there are two pawls pivoted about their centres which thus convert the push motion of the rod into a pull on the clutch. To obtain this pushing action, the arm of the quick threaded portion is reversed, and then connected to the clutch pedal in the usual way. The sole concessionnaires for this fitment are the Burlington Motor Cycle Co., Ltd., 7, South Side, Clapham Common, London, S.W.4.

Mills's pedal for Sturmey clutches.



A simple hand lever control attached to the B.S.A. clutch pedal; it does not involve any alterations to the existing control, and is sold ready for fitting by the Ixion Motor Mfg. Co., Great Tindall Street, Birmingham.

This firm also makes a clutch pedal auxiliary to the hand control on Sturmey-Archer countershaft gear boxes. A. Uppadine, Longford, Coventry, is another to design a pedal on similar lines, which we illustrate. It will be noticed that it is only necessary to withdraw the existing clamping screw of the worm-operating lever and replace it with a long heel-operated pedal. Heavier and more elaborate, the Mills pedal nevertheless is on the same principle; the manufacturer in this case is Cyril S. Mills, Trent Lock, Sawley, near Derby.

Owners of machines with foot clutch operation only, who desire the dual system of control, are catered for by several enterprising firms. For example, B.S.A. clutches may be adapted for hand control by the hand-operated lever sold by the County Cycle and Motor Co., 307-314, Broad Street, Birmingham. The Ixion Motor Manufacturing Co., Great Tindall Street, Birmingham, is another firm which markets a somewhat simpler conversion set.

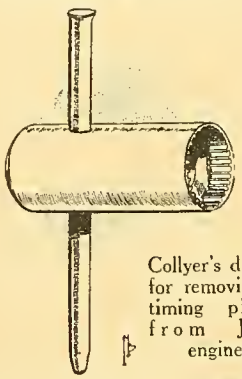
Apart from the improved efficiency and comfort that such conversions and adaptations as we have indicated will provide, there is a subtle satisfaction in possessing a "new-old" machine. For it is very often, in some respects, also a unique machine; and often, too, such modernised mounts are not one whit behind the equivalent capacity machine of to-day in pulling power or reliability.

Finally, the pleasurable sensation of achievement more than compensates for a few hours' toil in the garage at a season when, the same time might be wasted by the fireside.

Hand control set for B.S.A. clutches made by the County Eng. Co

MID-WEEK TRAFFIC.

THE Autocar recently contained a sunrise to sunset census made on February 1st of traffic on a busy trunk road. Although its purpose was mainly to arrive at some reliable data as to how the new licensing regulations were being complied with, some of the tabulated figures are of quite general interest. For example, while more than one hundred and eight cars and a similar number of lorries passed by, only fifty-two motor cycles and sidecar outfits appeared during the day. We venture to think that a Saturday afternoon or Sunday census would almost have reversed these figures. Again, solo motor cyclists at that date had apparently been just as lax as car owners in the matter of obtaining their licences (only 68% of each class exhibited the necessary blue card). 89% of the sidecarists, however, were licensed, and the only three three-wheelers were all conscientiously adorned.

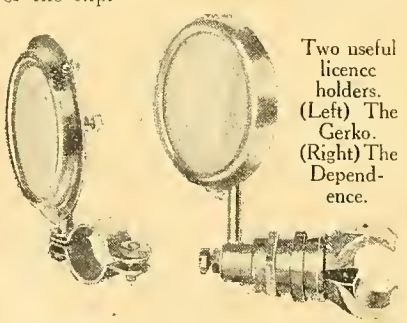


It is rather surprising that during the day only 106 pedal cycles (approximately double the number of motor cycles and sidecar outfits) were observed. Evidently the mechanically-propelled two or three-wheeler is ousting the ordinary bicycle to a greater extent than is generally imagined.

Removing the Small Timing Pinion.

A useful tool for garage owners and those motor cyclists who do their own repairs is one lately brought out by P. F. Collyer, 78, Snell's Park, Upper Edmonton, London, N.

It is a tubular spanner, the end of which is shaped like an internally toothed



Collyer's device for removing the timing pinion from J.A.P. engines.

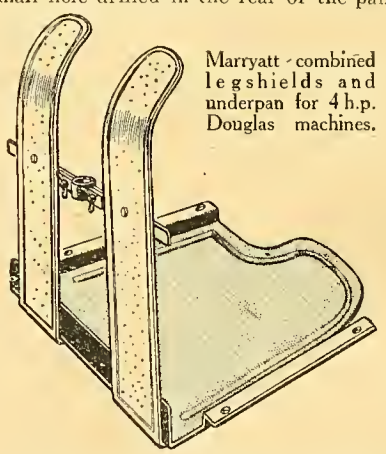
gear wheel, the object of which is to engage with the teeth of the small timing pinion on the J.A.P. engine, the small timing pinion of which is screwed on to its shaft. By means of the tool illustrated the timing pinion may be removed without fear of damage.

Two Licence Card Holders.

Made by the Great Eastern Rubber Co., 31, Norton Folgate, London, E.1, the Gerko licence card holder is a neat example of the conventional pattern of this fitment. One nut, however, is saved by the supporting arm also acting as a screw for the clip.

Two useful licence holders. (Left) The Gerko. (Right) The Dependence.

An exceedingly well-made licence holder provided with a very ingenious form of fitting is the Dependence, made by Messrs. J. and R. Oldfield, Ltd., 215, Shaftesbury Avenue, W.C.2.



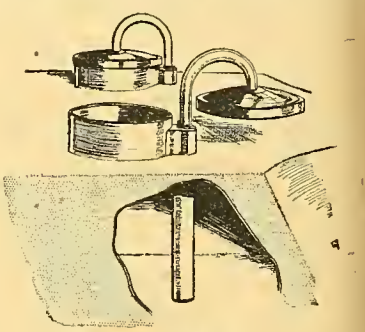
The clip works on the same principle as the jaws of a drill chuck, providing an unobtrusive but strong fastening to any tubular part of the machine.

A Douglas Legshield and Underpan.

There is a distinct tendency nowadays to design accessories specially for various popular makes of motor cycles. The fitments described below are applicable only to Douglas machines.

A neat and simply constructed accessory, which combines a pair of metal legshields and an underpan, is marketed by the Marryatt Engineering Co., Lurgan Street, Great Church Lane, Hammersmith, London, W.

Two models are made—one for the 4 h.p. Douglas machine, the footboards of which permit a simple method of attachment for the underpan by bolts passing through holes drilled in the side flanges. The second model, for the lightweight machine, is attached by a spring clip to the frame at the rear, whilst the front end is held by clips fitted around the forward footrest spindle. The side flanges are, of course, eliminated, and an oil trough drains the lubricant to a small hole drilled in the rear of the pan.



Marryatt combined legshields and underpan for 4 h.p. Douglas machines.

The legshields are attached beneath the front of the underpan, and are held in position by a cross member fixed at the centre to the front down tube of the frame.

Petrol Tank Filler Caps.

The filler cap of a motor cycle tank is a fitting which has undergone numerous improvements, but there is undoubtedly more work to be done in this direction. The experienced motor cyclist is well aware that filler caps should be amply large, should be leak-proof, should be incapable of being lost, and yet easily detachable. The latest invention of Mr. A. C. Davison, 163, Arlington Road, Camden Town, London N.W., the well-known tank maker, apparently adequately answers these requirements.

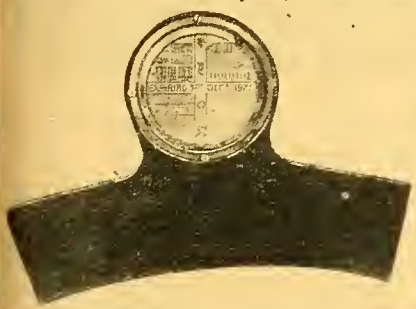
The actual cap, which is cork-lined, is carried on an inverted U shaped tube held down by a spring in an outer tube let into the tank. To detach the filler cap, it is pulled up sufficiently high to leave it clear of the orifice over which it fits. At the same time, a tongue on the small tube is raised so as to be sufficiently clear of the groove in which it rests to allow it to be turned to one side. The filler cap may now be swung clear away, and will not re-engage until it is dead square with the orifice.

Davison's filler cap.

In the sample tank submitted to us the two filler caps were placed fore and aft, and not side by side, as shown in the illustration. The idea strikes us as being ingenious and practical, while it is an undoubted boon when thick gloves are worn.

A Licence Holder for the Tank.

Quite a number of our readers have expressed their disapproval of licence holders which have to be fixed to the machine by means of clips, and others have stated that they consider the tank the ideal place for the new accessory. Very few makers have considered this position, perhaps for the reason that it is more a matter for the tank maker than those providing for accessories. However, Messrs. J. B. Brooks and Co., the well known saddle firm, have introduced a holder to be fixed by straps to the tank. A leather back prevents the holder from damaging the enamel. This fitment is made in polished aluminium, and sells complete for 7s. 6d.

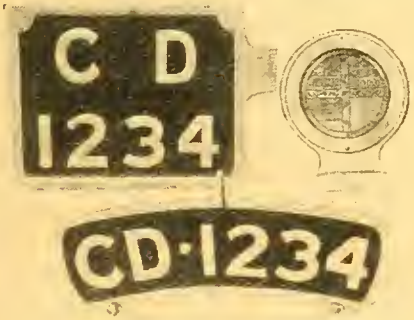


The J. B. Brooks licence holder for the tank.

Among the Accessories.—

Licence Card Holders.

An ingenious licence card holder has been brought out by Messrs. C. Bryant and Co., 34 and 35, Mortimer Market, Tottenham Court Road, London, W.C.1, which serves a dual purpose. Incorporated with the front number plate, it embodies

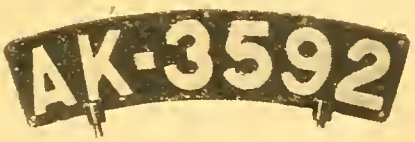


Bryant's licence holder and number plate combined. The reverse side takes the A.C.U. badge.

on the left-hand side the licence card holder, while on the reverse side the A.C.U. badge is displayed. This makes a remarkably neat fitting. We have suggested to the makers, however, how the two portions of the licence holder could be secured without the aid of screws, which would greatly simplify cleaning.

Provision for Licence Holder and Tail Lamp.

There is no doubt that cast aluminium number plates greatly improve the appearance of a motor cycle. Those lately brought out by Messrs. F. T. Turpin's



Turpin's aluminium plates with provision for fixing licence holder and tail lamps on the front and rear plates respectively

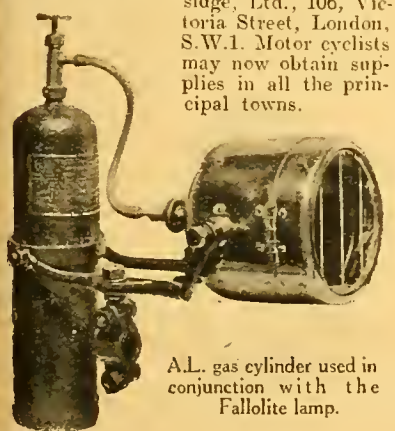
Motor Depot, 27, Preston Road, Brighton, are certainly attractive in appearance. The front number plate has lugs welded on to it for attaching directly to the front mudguard, and may be had provided with an attachment to which a badge may be fixed, so that a neat aluminium licence holder can be screwed on to it. This licence holder is practical in design. The two portions are held together by brass countersunk screws which barely project through the face plate. Reverting to the number plate, it will be noticed that the front number plate is curved, following the contour of the front guard, while there is a lug cast on the rear number plate, to which an electric or acetylene rear lamp can be fitted.

Aluminium Number Plates.

We illustrate here a very neat aluminium number plate, which is the product of Messrs. Ward Motors, Ltd., 32, Hustler Street, Otley Road, Bradford.

The letters and numbers are raised in bold relief, and are clearly indicated,

The aluminium number plates produced by Ward Motors consist of two plates riveted together.



since the background is enamelled black. The two sides are held together by a number of rivets, whilst, at the purchaser's request, two substantial lugs may be securely fixed to the bottom of the plates.

DISSOLVED ACETYLENE.

An Always-ready System which gives the Gas Lighting Set many of the Advantages of Electricity.

THERE is no more satisfactory form of using acetylene gas for lighting purposes than by carrying it in steel cylinders. The gas stored in these cylinders is free from moisture, and consequently there are no impurities or water which can enter the supply pipes and clog the burners. These facts have been known to many motor cyclists for a long time, and it has always been a source of wonder to us why the use of these cylinders has not become more universal.

It was not, however, until the present time that any firm has tackled seriously the important question of distribution. Dissolved acetylene in steel cylinders has been taken up by Messrs. Allen-Liversidge, Ltd., 106, Victoria Street, London, S.W.1. Motor cyclists may now obtain supplies in all the principal towns.

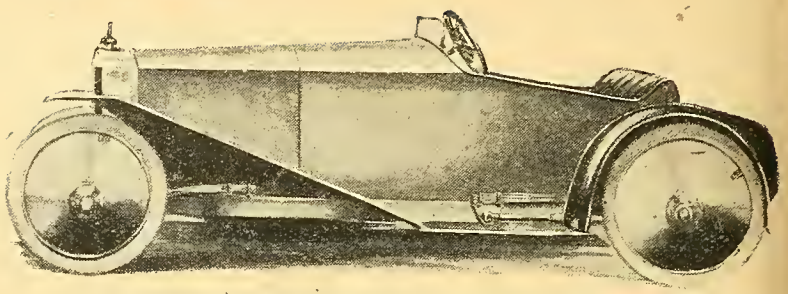
A.L. gas cylinder used in conjunction with the Fallolite lamp.

The company have wisely come to the conclusion that there is more business to be done with motor cycle owners than with car drivers, and the needs of motor cyclists, therefore, have been carefully studied. The A.L. cylinder is of solid drawn steel, the bottom end of which is spun over. It is filled with a preparation known as Kapok, a vegetable fibre, and a certain amount of acetone, with the object of breaking up the gas in such a manner as to render it perfectly safe under compression. This method of storing acetylene has been exceedingly popular in the United States, but it has never been possible to import the Prestolite cylinders, as they are known over there, into this country because the pressure of the gas has exceeded that allowed by the Board of Trade.

What it Costs.

The A.L. cylinders are sold in two sizes, the five cubic foot size for ordinary motor cycles, 3in. in diameter 10½in. long, weighing 5½ lb., and sold full of gas and including a valve, key, and pressure gauge for 80s. A recharge for this cylinder costs 4s. The ten foot cylinder for sidecar outfits has a diameter of 4in., a length of 12½in., weighs 8 lb. and costs 90s. It is also sold absolutely complete and a recharge costs 6s. Of these two sizes, the smaller cylinder gives fifteen hours light with a 14 litre burner, while the larger cylinder gives about thirty-five hours light. The average tail light burner, which is also used in some sidecar lamps, consumes 3½ litres.

Messrs. Allen-Liversidge, Ltd., have also taken over the Fallolite lamp, which, our readers will remember, is fitted with a Bunsen burner, the flame of which impinges upon a special pastile composed of rare earths. It gives an extremely brilliant light, and with this burner the cylinders have double the burning capacity of that of an ordinary burner. It should be noted that when dissolved acetylene is used the cylinders should be either vertical or inclined at not greater angles than 45°.



A.L. gas cylinders for solo and sidecar machines. The smaller cylinder has a 15 hr. capacity, and the larger 35 hr.

New Proprietary Units.

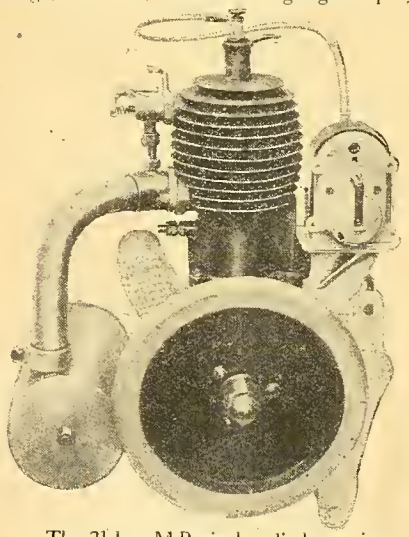
Single and Twin M.B. Two-stroke Engines. Two and Three-speed Gear Boxes.

Also a New Cycle Car.

The aim of the makers of the Wonder cycle car is depicted by our artist after examination of the working drawings.

CONSIDERABLE experiment has been made with large capacity two-stroke engines. From their behaviour in the big trials it is apparent that the higher powered two-stroke engine is capable of developing more power and attaining speeds greater than was at first generally supposed.

In the case of a twin-cylinder two-stroke engine, some difference of opinion has been expressed with regard to the disposition and relative angle of the two cylinders.

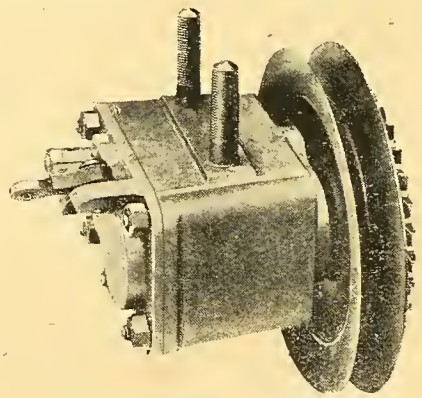


Messrs. Burts, of 245, Hammersmith Road, London, W.6, who have made prolonged experiments with a 2¼ h.p. single-cylinder two-stroke have selected the vertical side-by-side cylinder arrangement for their new 492 c.c. two-stroke, and since the larger model will be identical with the existing unit, with the exception, of course, of the addition of an extra cylinder, a brief description of the 2¼ h.p. unit will serve to illustrate the design of the new engine.

Single-cylinder Model.

The lightweight M.B. engine has a bore and stroke of 67×70 mm. (246 c.c.). It is of the three port type, and in most respects adheres to general two-stroke practice.

The cast iron cylinder is machined in the head, whilst great care has been taken to ensure a constant thickness of metal throughout its length.



A cast iron piston, fitted with two rings, is used, whilst the gudgeon pin, which is a taper fit in the piston, is provided with a double spiral oil-way and an annular groove in the centre. This latter ensures that the spiral is supplied with oil should the pin turn.

The 2¼ h.p. M.B. single-cylinder engine. Two of these units are used to form the two-cylinder cycle car engine.

Attention to Lubrication.

The lubrication system has received considerable attention, which is essential, since the makers claim an exceptionally high r.p.m. A single oil union only is used, and directs the lubricant to a port in the cylinder wall which coincides with the circular groove cut round the piston when it is at the bottom of its stroke. Thus the oil is fed to the piston and cylinder wall at this point, whilst directly the piston rises, the oil is directed down an oil-way drilled in a boss cast on the cylinder and thence to a circular oil-way cut in the cylinder base and top of the crank case respectively.

M.B. two-speed gear box, which follows standard practice.

This groove is connected with holes drilled in the crank case walls, which communicate with the crankshaft main bearings. The crank assembly consists of two hardened shafts to which the internal flywheels are riveted. An external flywheel is also fitted. The two halves of the crankshaft are balanced and secured together by means of the crank pin.

The fitting of internal flywheels reduces the cubic capacity inside the crank case, which is an important factor in two-stroke design. In order to ensure a pressure tight crank case, two felt washers are fitted to the outer extremities of each main bearing. The usual type of compression release valve is fitted. The gas, however, is directed through a by-pass to the exhaust pipe. A chain-driven C.A.V. magneto is fitted.

The 492 c.c. twin engine is, as previously stated, similar in specification to the small unit.

Amongst the other products of this firm are the M.B. two and three-speed gear boxes. The construction follows standard practice, whilst the class of workmanship is good. The main shaft runs on two Hoffmann ball bearings, and the lay shaft on two phosphor bronze bearings. The gear change is effected by means of sliding dogs.

The gear ratios of the two-speed box are—top 5.8 to 1, low 10.2 to 1, whilst the ratios of the three-speed box, which is fitted with a clutch and kick starter, are top 6 to 1, middle 10½ to 1, and low 15½ to 1.

New Lines on the Stocks.

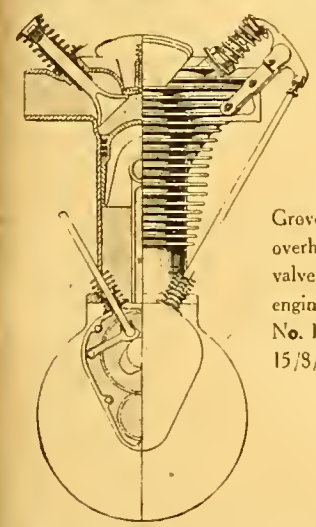
Another product which it is proposed to manufacture when the market resumes its normal condition is a small two-seater cycle car which will incorporate the twin two-stroke engine and the three-speed gear box units. It is christened the Wonder cycle car.

The illustration provides an idea of the appearance of the body. The transmission will be by chain from the engine to the countershaft, and thence by a flat belt to a large pulley on the back axle.

This pulley and that fitted to the gear box will be provided with a cork lining. We hope to be able to give a description of this machine in the near future.

AN ALL-WEATHER HELMET.

THE helmet illustrated appears to offer very certain advantages for all-weather riding. A speciality of Mr. H. Bednall, 55, Sutton Crescent, Walsall, it is made of soft leather lined with wool, and includes a flap in which are inserted two celluloid eye-pieces; this arrangement provides a very convenient type of goggle which cannot be lost or misplaced.

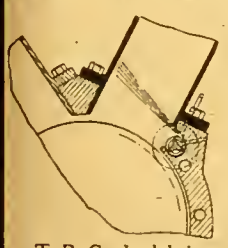


The Bednall helmet with eye-flap raised.

RECENT PATENTS.

REVIEWED BY B. H. DAVIES.

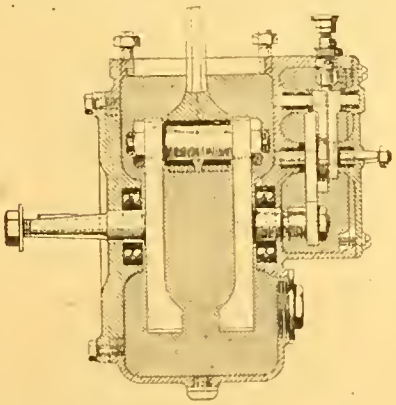
Cooling and Valve Gear.



Capt. H. F. Groves is of opinion that existing air-cooled engines are still under-cooled, and that a "belster" on the cylinder head will mend matters. It would be interesting to know if his patent is based upon actual research or net. At any rate, he holds that a fan-shaped pad or pack of copper fins, secured to the centre of the cylinder head by a finned nut, will improve matters. His fins are so heavily splayed that they compel him to incline the axes of his overhead valves at an angle to the axis of the cylinder—an inclination which is further desirable because it tends towards a hemispherical combustion chamber. He has devised a special rocker and tappet system to operate his inclined valves, and the rockers are mounted on roller bearings. The engine is evidently of the "hetstuff" *de luxe* order.

Groves's overhead valve engine. No. 150,520. 15/8/19.

Equalising Oil Supplies.

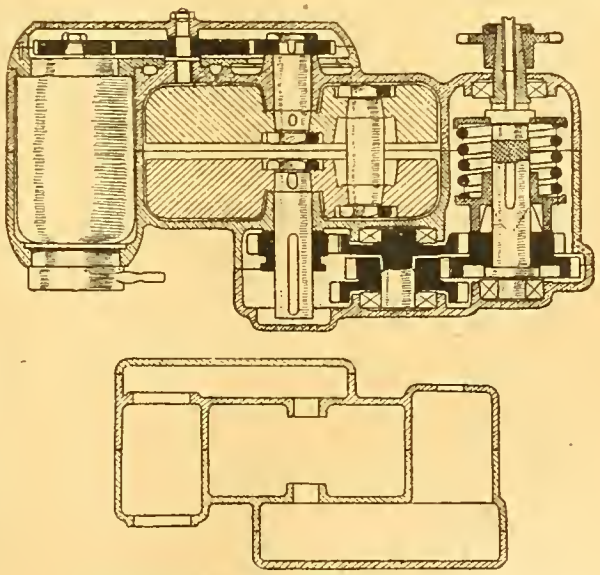


Mr. T. R. Castle suggests a novel method of oiling the front cylinder of a V twin. As the drawing suggests, the rear wall of this cylinder is not easily furnished with its fair share of the lubricant. He provides an oil channel at the base of its front wall, and in this channel he mounts an oil thrower, driven by spur gears off the crankshaft, and equipped with any suitable form of paddle or vane calculated to fling oil against the back wall of the cylinder. I much doubt whether such herculean measures are really necessary: surely a drip led to the point at which his oil splash hits the wall would obtain a similar effect much more simply?

T. R. Castle. lubrication. No. 139,978. 18/6/19.

Novel Crank Case Assembly.

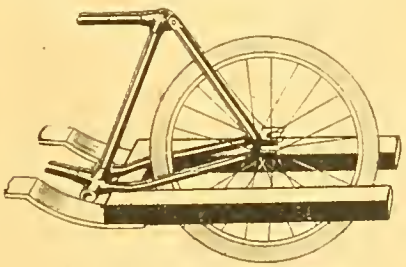
Messrs. Malcolm think it desirable that we should be able in emergencies to take out our crankshafts, leaving the crank case in position in the frame.



W. Malcolm and J. C. Malcolm, engine design. No. 139,980. 19/6/19.

Given an engine of the outside flywheel type, they mount the main ball bearing on the flywheel side in a detachable cover plate. The nut securing the crank pin to the crank web on the timing side is unscrewed by a box spanner inserted through a screwed plug in the crank case. The flywheel shaft, crank web, and crank pin are then withdrawn from the driving side, while the connecting rod and piston can be taken out if the cylinder is lifted. Can the average rider be trusted to re-assemble these parts satisfactorily?

Unit Construction.

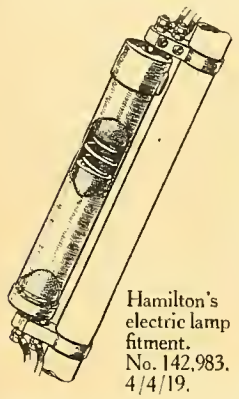


Signor Garelli, of Milan, is out to provide a cheap, neat, and compact power unit for motor cycles, which shall be cheap to manufacture, have a smooth exterior, and admit of easy adjustment. By using the Mea magneto, which has a cylindrical exterior, he contrives to pack his parts into a very neat housing, shown sectionally in the lower drawing. This section is taken on two lines forming a right angle in the vertical plane. The upper sketch indicates how the magneto, gears, clutch, and countershaft are arranged round the two-stroke single-cylinder engine.

Garelli's power unit. No. 135,497. 18/11/18.

Petrol Tank Position.

Jorgen Mygind, of Denmark, appears to have money to burn. He has gone to the trouble of patenting a U shaped petrol tank suspended below the chain stays on each side of the back wheel. His excuse for this eccentric construction is that it gives extra stability by lowering the centre of gravity, and further diminishes the wind resistance. If I understood Danish I would visit this inventer in order to hear his remarks after a heavy sideslip with such a vulnerable tank. He does not say whether he proposes to use an Autovac or exhaust pressure in order to feed his carburetter from such a low tank. In either case, I make a friendly

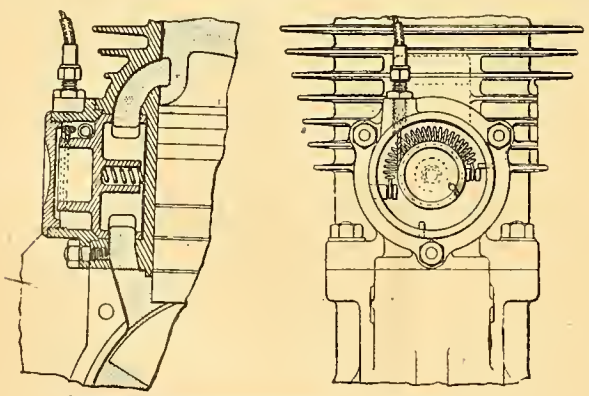


Mygind's petrol tank. No. 146,767. 28/9/19.

Recent Patents.—

appeal to him to abandon the design of motor cycles and to devote himself to producing butter.

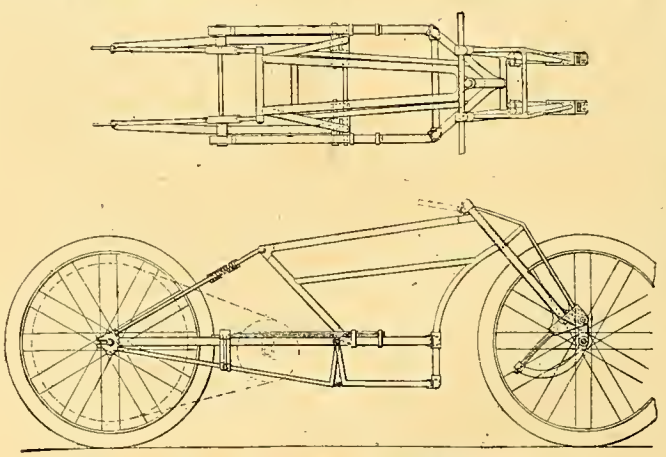
Dry Battery Carrier.



I can only find one snag in Mr. C. J. Hamilton's patent carrier, designed for containing two dry batteries for lighting purposes. The case is cylindrical, and is carried on the seat-pillar tube by two pinclips, similar to those which are now universally used for mounting tyre inflators. The electrical details are so cunningly arranged that the head and tail lamps are switched on and off by rotating the carrier in its clips; and the thoughtful inventor has even arranged that the head lamp may be switched on separately when a rider desires to economise current in the apparent absence of the police. Moreover, there is no need to detach any of the wiring when changing a battery. If only dry batteries could be relied upon to give a powerful light for a long period we need have looked no further for an ideal lighting system. As it is, the well-known deficiencies of the dry cell limit the practical utility of the invention.

Hamilton's electric lamp fitment. No. 142,983. 4/4/19.

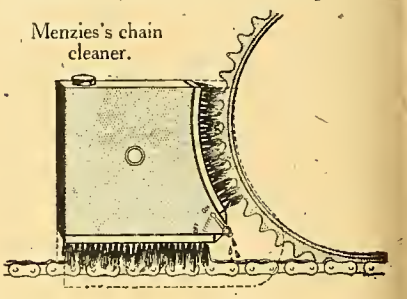
Throttling the Transfer Port.



It is well understood by two-stroke enthusiasts that carburation presents special difficulties with this type of engine. Viewed as a pump, the crank case is a somewhat bulky and amorphous chamber. The timing of the inlet and transfer ports is limited in range, as compared with the possibilities of the poppet valve. Mixing with the exhaust gases is a serious problem. Mr. Cecil Robotham's invention attempts to minimise the first of these difficulties by transferring the throttle to the transfer pipe, in which he places a barrel type of throttle, opened by a Bowden wire, and returned by a coiled spring. He hopes by this means to get a larger charge into the crank case at low speeds than will be transferred to the combustion chamber, and hopes to reduce the tendency to four-stroke by maintaining the maximum crank case pressure for a longer period of time than is usual. Has he devised a carburetter which will give a perfect mixture at all engine speeds when attached to such an engine? And, if not, does he consider that riders will put up with an extra control?

Robotham's two-stroke engine. No. 144,468. 7/6/19.

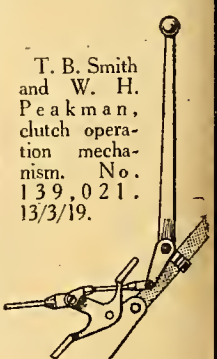
De Luxe Springing.



Mr. J. H. Anscombe has worked out a completely sprung frame, which very possibly furnishes extreme comfort on the road. I would, however, venture to draw the attention of many recent patentees of spring frames to sundry vital facts which are too often ignored. Rightly or wrongly, many practical riders are of opinion that a rigid frame conjoined with *(a)* big tyres, *(b)* a first-class saddle, and *(c)* a first-class fork, affords approximately the same road comfort as the best spring frames which have been manufactured up to date. The combination of big tyres, good fork, and good saddle is a little heavier and a little more costly than the sort of specification which was current in, say, 1911; but it is not a great deal heavier nor a great deal more costly. Before cerebral tissue and Bradburys are lavishly exhausted on perfecting and protecting any given spring frame, the inventor should surely be pretty certain not merely that his frame is comfortable, but also that it is cheap to make and light in weight. Mr. Anscombe's frame, illustrated herewith, strikes me as isolating the ideal of comfort too exclusively. It can hardly be light. It can hardly be cheap. One is sorry to press these sordid commercialities, but they dominate all motor cycle inventions, and are too often forgotten. One seldom sees a rear-sprung frame layout pivoted so far forward of the countershaft; the front chain tension will present problems in attaining constancy.

Anscombe's motor cycle frame. No. 150,227. 19/1/20.

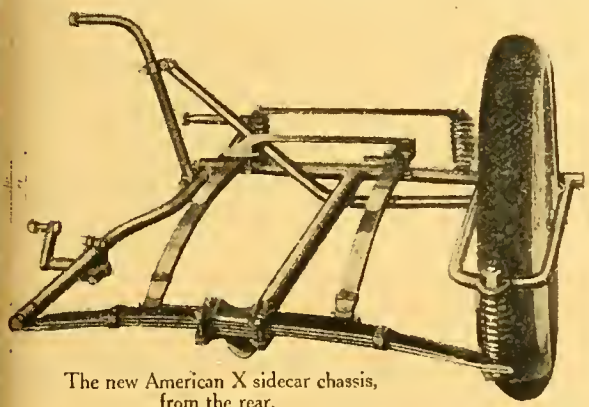
A Valet for the Chain.



Mr. A. S. Menzies has provisionally protected, and is anxious to sell, a device for cleaning and oiling chains whilst they are at work. A small oil reservoir, fitted with drip valve and stop cock, is mounted immediately forward of the rear sprocket. Brushes sliding in grooves remove dirt from the chain and sprocket respectively, whilst an adjustable supply of oil drips on to the cleansed chain before it engages the cleansed sprocket. Where an enclosed chain runs in an oil bath no such apparatus is needed. Where the chain is naked, it is questionable how far the dirt swept off by the brushes would be thrown clear, especially as side screens are fitted to prevent dirt from the road reaching the lower brushes. Presumably Mr. Menzies has satisfied himself on this point. Encased rear chains inspire little affection either in designers or users, and there would be a good demand for a device which kept naked rear chains in good condition for long periods of use.

Menzies's chain cleaner.

Dual Clutch Control.



Messrs. Smith and Peakman, like many riders, have been excessively annoyed by the rocking type of clutch pedal, which on occasions compels the driver to hook his boot under the pedal plates to get the clutch right in or right out. I had supposed that this evil design had joined the dodo in oblivion, but the patentees disagree with me, and propose the interconnected hand lever shown in the sketch. Dual clutch control is becoming more popular lately, however.

T. B. Smith and W. H. Peakman, clutch operation mechanism. No. 139,021. 13/3/19.

AN AMERICAN SIDECAR CHASSIS.

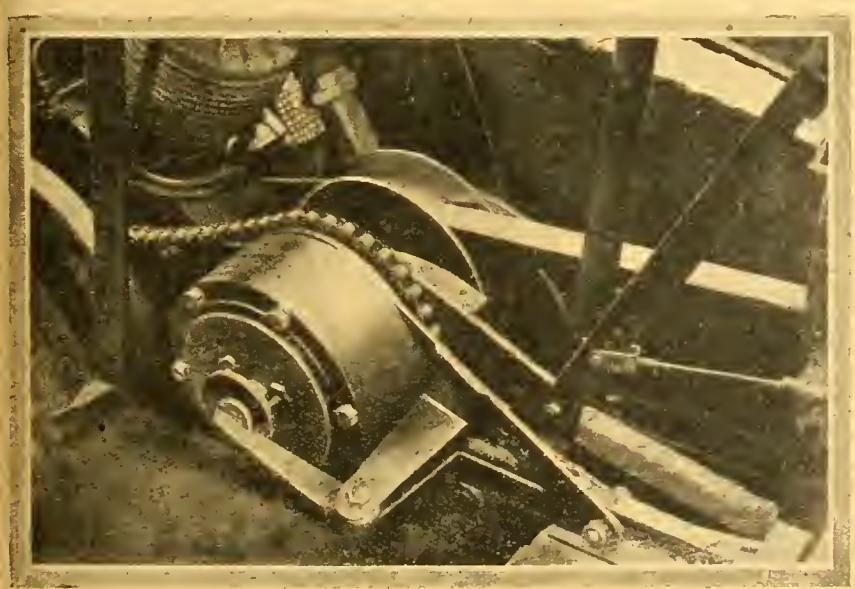
FROM first glance at the illustration given here of the American X sidecar, one would conclude that the view was taken from the front end of the chassis, and it is first necessary to get accustomed to the idea that the transverse spring is at the rear before the principle of the construction can be grasped. Apparently, the only rigid member of the frame is the tube which is fixed longitudinally with the machine. The *front* tubular member, to which is connected the wheel frame, is free to swing on a bearing on the longitudinal tube, and carries the coil springs which support the front end of the body and a centre tube extending rearwards. On the end of this are (1) a transverse stay supporting the ends of the quarter-elliptic springs which extend from the rear of the body and (2) a long transverse spring, the ends of which are connected to the front ends of the wheel frame and the rigid member respectively.

The new American X sidecar chassis, from the rear.

Although patented in Great Britain by the American company, this chassis may not be available in this country, as it is the usual practice for American machines to be imported *sans* sidecars.

This design again indicates the popularity of flexible chassis abroad, although we have many spring wheel sidecars.

A 110 lb. TWIN RACER OF 1905.



THE rider shown in the accompanying photograph is probably unknown to most of our readers, though he won the first speed event ever held over British roads. Mr. J. S. Campbell, of Greenock, proved the victor in the eliminating trials held in the Isle of Man to select a British team of three for the 1905 International Cup Race. The course was seven laps of a twenty-five-mile triangle, with Douglas, Castletown, and Ballachraine as its apices, and Campbell's 6 h.p. Ariel covered the 175 miles in 4h. 9m. 36s., H. A. Collier being second on a Matchless, and C. B. Franklin third on a J.A.P. The British team were outclassed in the International Cup Race, held at Dourdan a few weeks later, the Austrian Wondrick on a Laurin-Klement machine scoring an easy victory over the French.

A glance at Campbell's machine will rouse surprise that such an outfit should have been capable of sustained speed. Under the absurd rules then current, the total weight was limited to 110 lb. Note the Watawata belt, drilled pulley, cranked out rear forks, rigid front forks, and, above all the accumulator on the front of the machine. Even in those early days safety helmets were worn. Six months after the race Campbell had a bad smash, and retired from racing; otherwise his name would doubtless have been a household word, like those of the two men who hunted him home in the Isle of Man.

The small diameter of the tyres is also noticeable, while those who fear the effects of vibration upon their lighting accumulators, which are carried on modern large tyred machines, may well reflect that the batteries were strapped to the rigid front fork girders, and so take hope accordingly.

The winner of the first official speed event held on British roads—J. S. Campbell. His machine was a 6 h.p. Ariel weighing only 110 lb.

The Ballard epicyclic reverse gear for Blériot-Whippet and Morgan cycle cars fitted to one of the former vehicles.

A REVERSE FOR BLERIOT-WHIPPET CYCLE CARS.

MANY owners of a Blériot-Whippet have found the need for a reverse, and even though the vehicle is very light a reverse gear is often necessary for the purpose of manœuvring in a confined area.

The question of undertaking this work has received the careful study of Messrs. Ballard's Motors, 92, Gloucester Road, South Kensington, London, S.W., and they have evolved an epicyclic gear fixed to the countershaft and controlled by a lever working in the same rack as the clutch and hand-brake lever. The actual engagement is effected by means of dogs.

Naturally when running in the forward direction the epicyclic gear is completely idle, as it rotates as a solid disc. It seems that it might also be possible to incorporate a specially low emergency gear in a device of this kind, which would come in very handy at times. The actual diameter of the gear illustrated is 6⅜in., but this will be reduced in all future models to 4½in. It is also intended to fit this reverse to the countershaft of a Morgan.

LETTERS to the EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

PRICES OF CARBIDE.

Sir,—I wonder if one of your readers can tell me why I have to pay 1s. 2d. for a 1 lb. tin of carbide, while an advertiser in *The Motor Cycle* offers it at 31s. per cwt. (or 3.3d. per lb.). Allowing for tins, "tinning," and the retailer's profit, surely 1s. 2d. is a bit "thick."

CARBIDIER.

Birmingham.

HOLLAND V. GREAT BRITAIN.

Sir,—The International Trial with Holland is to be held again this year, this time over here. To be fully representative, it should be styled Holland (the challengers) *v.* Great Britain, and the best riders from England, Scotland, and Ireland invited to form our team. As a member of the organising committee, I propose to bring this point forward, and should be glad to have a note from any of your readers who agree with me, with suggestions as to possible members of the team.

FRANK A. HARDY.

COURTESY THAT MAY BE DANGEROUS.

Sir,—Referring to the recent paragraph in "Current Chat," I have experieneed this eourtesy (of dimming glaring head lamps) several times in the country roads where I live, but on one occasion, when it was extended to another, it was nearly my undoing.

I had just turned out to overtake a horse and trap, when immediately on top of me I saw the dull glow of doused lights, and I had a very narrow eseape of a "head on" eollision. The driver of the car had evidently doused his lights for the benefit of the horse and trap in front of me, a slight bend in the road preventing my seeing the head lights before they were "off."

If aeeidents of this kind are to be avoided, it will be necessary to insist on all ears having small subsidiary lights.

Brentwood. F.R.

BRITISH MACHINES WANTED IN SWITZERLAND.

Sir,—As a reader of your splendid journal, I know I am bringing to notice a much discussed question.

Out here one can purchase four kinds of machines only—two of these are American and two are Swiss. It seems to me a great pity that the English manufacturers are unable to realise that there is sueh a eountry as Switzerland. If some enterprising firm would send along a medium-powered, reliable machine, capable of taking a sidecar, I do not think it would be disappointed in the way in which its goods would sell.

Also, there is a chance not to be missed for a machine like the Brough Superior. The Swiss are good sportsmen, and love speed. It is depressing for an Englishman to watch speed trials in which England is not represented.

Why do not the British manufacturers wake up?

Geneva. S. N. TURNER.

WHERE WILL THE MONEY GO?

Sir,—It will be interesting to know the total revenue derived from the new scale of motor taxation, presuming that the authorities publish the figures at a later date when the majority of taxes have been paid.

I am told that all money collected by this taxation has to be spent either on the maintenance and repairs of existing roads or towards the construction of new roads.

It seems only right that this should be so, but the question which now exercises the minds of so many motor cyclists is whether some councils or boroughs actually intend either at once or at a later date to commence repairs.

Most of us would like to know whether any effective pressure could be brought to bear on those authorities who persist in adopting a "nothing doing" attitude whenever the question of road repairs is raised, for it is certain that practically all of your readers can name stretches of road where the surface is either very poor or similar in condition to the road in the New Forest, a photograph of which appeared in a recent issue. Unfortunately, this type of road is only too common at the present time.

I should like to know whether we are to get any return for the considerably increased premium we now have to pay for the privilege of being allowed on the road.

Chorley Wood. PAGHALED WALLAH.

CAUSES OF A SLIPPING CLUTCH.

Sir,—In your issue of February 3rd, under "Questions and Replies," a case of slipping in a clutch lined with Ferodo friction discs is mentioned. May we remark that, while your reply is perfectly consistent, there is still a further and very prevalent cause of slipping, *i.e.*, overloading.

Some motor cycle clutches, originally designed for small power engines, are now fitted to heavy sidecar outfits, and, instead of taking the drive of, say, a 4 h.p. engine on a single machine, many have twice the duty imposed on machines fitted with a sidecar. If such be the case, while frequent cleansing of the friction surfaces will effect something, the only real cure is to increase the number of driving and driven elements. Usually the clutch box does not readily permit of this, but if the clutch is of multi-plate type, a considerable mechanical advantage may be obtained by using thinner linings and additional driving and driven elements; or by taking out a number of the floating linings, and substituting them by steel plates with fabric insertions, an additional number of elements can be introduced. Undoubtedly, it is much better practice to obtain additional driving power in this way than by increasing spring pressure, which, generally speaking, is as high as it is convenient to apply.

FERODO, LIMITED.

A. R. Eglington, roller skate champion, and G. F. Ammon, motor cyclist, who will race at Holland Park Rink on March 19th.

In a modern garden village, St. George's Hill.

FOUR-STROKING.

Sir,—My riding experience does not actually coincide with that of "Engineer" in a recent issue. I am riding a 2½ h.p. Clyno, and from my 6,000 miles on this machine in all weathers, I have found that :

(1.) Over-oiling will upset two-stroking, whether it be by drip feed or petroil.

(2.) On a slight down grade or running with the wind a little more on the throttle will secure two-stroking.

(3.) Four-stroking occurs when crossing a field of pot-holes.

(4.) Four-stroking occurs when the machine is "running on the stand," or stationary with the gears in neutral. Two-stroking can be effected by use of the exhaust valve release.

(5.) When running slowly I keep the air fully open, shutting the throttle until it is nearly closed, and the machine two-strokes beautifully, smoothly, and singularly devoid of noise. On opening the throttle slightly, four-stroking occurs, and still more throttle (usual for ordinary running) produces two-stroking. From this I infer that the four-stroking stage is an intermediate one on the throttle.

When I experience four-stroking on my machine (which is very rarely), I feel that it is just pure "cussedness" on the part of the engine J. W. CLAMP.

MORE ABOUT THE MAGNETO QUESTION.

Sir,—Replying to your correspondent "Broke," we have in stock a brand new Bosch magneto and a B.T.H. Both of these are V twin magnetos (which, of course, is the most difficult type of any magneto to get perfect firing on both cylinders). We shall be pleased to give him a practical demonstration first as to efficiency of spark, and secondly detail and workmanship, of the superiority of the B.T.H. over the Bosch, and the price is equal. We can also supply him with a list of riders who have used these magnetos in all the important trials of 1920. We are still waiting to get one back for repair or adjustment.

EUSTON IGNITION CO.

Sir,—The views expressed in "Broke's" letter in the issue of the 10th inst. are shared by a very large section of the present, as well as prospective, motor cycling fraternity. Numbers of would-be motor cyclists are at the moment deterred from purchasing mainly because of high prices. If the industry, in common with other industries, wants to increase an effective demand for its products, prices must be lowered.

Protection involves artificially inflated prices; otherwise, no protection is afforded. High prices mean restricted demand and output; low prices, increased demand and production. This is an economic truth which the people to-day are beginning to realise. The existing import duty of 33⅓% should be abolished forthwith, as it is a cause of present high prices of motor cycles, and was only introduced as a "war measure."

If the British magneto, generally speaking, is equal to the Bosch, what have our manufacturers to fear, and why the need for protection? As an ex-D.R., I venture to say that a Bosch was a much coveted possession in the Army, and to-day is equally sought after.

Opinion and feeling against protection are very strong amongst motor cyclists, and I for one strongly endorse "Broke's" sentiments, and feel that if introduced permanently into the motor or any other industry it will have disastrous effects for British manufacturers as well as for the consumers. H. MORRILL.

Sir,—I was very glad to read your leader on this question some time ago, and only write because I think there are many others who think like "Broke" does, because they do not realise the unfairness of the position that the mark's rate of exchange places the British manufacturer and workman in.

I have a report in front of me from Germany which states "A workman who is not earning 24,000 marks per year is absolutely starving. On *pre-war* rates of exchange, this works out at £1,200 per annum, say £23 per week, which, for a forty-seven hour week works out at 9s. 9d. per hour.

The British workman, for the same work, is getting, shall we say, 2s. 6d. per hour, and yet with the rate of exchange of the German mark at 1d., instead of 1s., this German labour is being imported into this country at one-twelfth of 9s. 9d. That is, the German labourer is competing with the English at the rate of 9¾d. per hour against the Englishman's 2s. 6d.

If one adds 33⅓% on the 9¾d. one only gets somewhere in the neighbourhood of 1s. per hour; and if we buy German goods the Britisher is still walking the streets.

Speaking for myself, I have run my 1919 8 h.p. Enfield on a British magneto with absolute satisfaction and not the slightest trouble.

This country of ours has got to be top dog commercially, and it is only by everyone insisting on having guaranteed British mounts, British tyres, British magnetos, and British everything that she will get there.

Most British trades have only had two (difficult) years in which to make good since the Armistice, and while some have not yet equalled the Germans, others have overtaken them, despite the fact that Germany has had the experience of a lifetime. R. C. ROGERS.

["Broke's" denunciation of the 33⅓% protective tariff on imported magnetos and his failure to find a British magneto equal to the Bosch has inspired a number of letters, of which those printed above may be taken as representative of all sides of opinion on this question.—Ed.]

AMERICAN v. BRITISH SPEEDS.

Sir,—Mr. L. W. G. Hartley's ingenious explanation of the reason for American times being faster than ours suffers from one obvious defect.

Dry air is heavier than moist air, as any chemist will tell you, because water vapour is lighter than air.

Woolwich. GUNNER.

Sir,—*Re* the recent correspondence regarding the question as to why motor cycle speeds in America are greater than over here, Mr. L. W. G. Hartley, in your issue of February 10th, advanced the ingenious explanation that the air being less humid in America causes less resistance to high speeds than the damp air of this country. I fear, however, that this explanation scarcely "holds water." While it is true that the prevailing atmosphere of most parts of the States is "drier" (in more senses than one) than in England, and that "the chief factor militating against big speed is the resistance of the atmosphere," yet surely your correspondent has overlooked the fact that air containing water vapour is *less* dense than dry air. One has only to consult an ordinary barometer to ascertain this. Hence, since the resistance to motion of a body varies directly as the density of the surrounding medium, the fact that humid air is lighter (or less dense) than dry air ought to assist, rather than retard, the attainment of high speeds.

As a matter of fact, the difference is too small, I think, to be of any real account either way. Probably the true reason lies in the fact that the American speed merchant has always concentrated all his energies on the production of big high-powered machines, since the bad roads, etc., demand such engines. It is noteworthy that no records of any account have been put up, to my knowledge, in any but the "unlimited" class. Such high efficiency machines as our Sunbeam, Norton, etc., in the 500 c.c. class are unknown in America. D.D.B.B.Sc.

Stafford.

CONTINENTAL ROTARY ENGINES.

Sir,—In your issue of January 27th there is a short description of a rotary-engined wheel, the invention of a Finnish engineer.

Will you kindly permit me to state that this does not appear to be a very original idea, since there is already in existence a motor cycle called the "Megola," which has a five-cylinder rotary engine of the so-called opposed type? This machine is being built by a firm of engineers in Munich.

Up to a few months ago the engine of this machine was built into the back wheel, but since then the design has been varied, and the engine is now fitted to the front wheel, whereas the back hub contains an electric self-starter motor. This is of importance, as no clutch is required and no gear box is provided. The engine may be throttled down to a "tick over" without too great a loss of power, owing to the number of cylinders and the even torque. At full speed, the engine makes 3,000 r.p.m.—that is, the crankshaft 2,500 r.p.m. in the opposite direction to the cylinders, which revolve at 500 p.m.

The machine has several other features which have attracted my interest, so that I am very keen on it. Nevertheless, I have decided to stay with a machine of a little more conventional design for this year, and have taken delivery of a Mars. But when the makers of the five-cylinder have gained a little more road practice I feel sure that it will not require a great deal to persuade me to change.

Berlin, W.30. ENTHUSIAST.

D. R. O'Donovan and his Norton, with which he recently beat several records. The sidecar was designed by Mr. Muller, of Vickers, and was built alongside the track at Brooklands. O'Donovan's mean speed was 65·81 m.p.h.

SUMMARY OF CORRESPONDENCE.

In reply to "HC 1724," who wished to buy benzole in bulk, Mr. J. Hale recommends Messrs. J. M. Steele and Co., of Thames House, Queen Street Place, London. Also referring to the question of benzole supply, the R.A.C. gives favourable publicity to a large refinery at Church Path, Mitcham, Surrey.

Several interesting letters on the subject of "Car Practice or Simplicity" are unavoidably held over this week. The majority of these take the viewpoint that the average motor cycle is more reliable and a better hill-climber than the average car.

Inspired by the Rev. J. M. Philpott's letter on "Dog Catching," Mr. J. L. Aitkinson sends us an account of a very similar drama, where, however, a cat took the leading part. Somewhat too gruesome for publication is his description of how the unfortunate tabby had to be forcibly extricated in a very much dead state!

"Patient Pete's" observation in these columns some time ago that "an automatic carburetter will not supply sufficient power from cold to let the rider get away easily" has been productive of several denials from users of various automatic carburetters. A correspondent, signing himself "YX," praises the Cox-Atmos in this respect and on account of its general functioning. Mr. F. Mills, the maker of the Mills carburetter (described in *The Motor Cycle* of October 14th, 1920), points out that on his instrument allowance has been made for this by withdrawing the tapered needle a quarter of an inch out of the jet when starting from cold. He also states that any reader may try this carburetter.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

QUESTIONS AND REPLIES

A selection of questions of general interest from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects

FACTORS IN CHOOSING A MACHINE.

As a novice I shall be glad of your kind assistance in the choice of a machine for 1921. My present and first mount is a 2¾ h.p. flat twin Douglas. The roads around my home, however, are in a terrible condition, and a heavier machine is indicated; also I shall want a sidecar. My requirements are: (1.) Comfort both for passenger and driver, including reasonable absence of engine vibration. (2.) A machine that can be readily disposed of without abnormal depreciation. (3.) Strength *(vide* remark *re* roads above). Any of the leading single, flat, and V twin outfits come within my present financial scope, and I shall be much obliged if you will kindly indicate which type you think would best suit me. (I assume that there is little to choose between them on the ground of reliability.)—E.G.

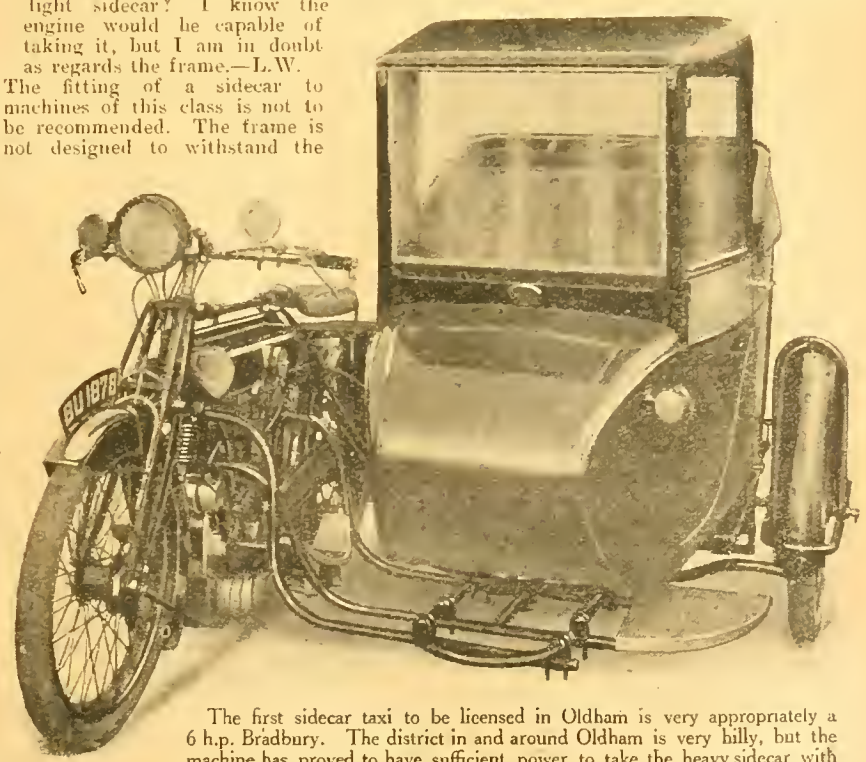
If absence of engine vibration is one of your essential requirements, we should recommend that you have a flat twin machine, of which type there are several excellent examples to be had. You would no doubt find, however, that depreciation would be less on the single-cylinder machines, but they are much less comfortable to drive. V twin engines occupy a middle class. They are smoother than the singles, but the torque is not so even as it is in the horizontally opposed engines.

TYRES AND TRANSMISSION.

(1.) I understand that certain 28 × 3in. tyres fit certain 26in. rims. I should be glad to know what makes and sizes of larger tyres I can fit to my 1914 B.S.A. with 2½in. rims? (2.) When I wheel this machine in free engine, a slight creaking noise comes from the back wheel, which I imagine is due to the wide belt rim giving under the tension of the belt as the wheel revolves. Is this usual and due to the additional strain of a wide rim on the spokes? The rim seems to be as securely fitted as the system permits. Will this kind of belt rim be strong enough for sidecar work? (3.) Sometimes when I change down to middle gear there occurs and continues a grinding or rubbing noise such as might occur if the piston or the gear box were dry. Neither is the case, and I cannot locate the trouble. Can you suggest anything? The engine and gear box are in quite good order.—S.A.P.

(1.) 28×3in. tyres can be fitted on 26×2¼in. rims, but they cannot be fitted to 26×2½in. rims. You can obtain 26×3in. tyres to fit 26×2½in. rims. These would serve your purpose, but first make sure that there is sufficient clearance between the wheel and the mudguards. (2.) In all probability, the noise you describe is due to the belt being rather too tight. As you are probably aware, however, the belt rims on the B.S.A. machines are now fitted with separate spokes, and if yours show any signs of coming adrift it might be worth while having one of the new pattern wheels substituted, if you intend taking up sidecar work. (3.) The noise you notice on middle gear may be due to the gear control being out of adjustment, or it may be that the middle gear pinions are rather worn. Without fuller particulars, we cannot tell you definitely what it is.

FITTING A SIDECAR TO A LIGHTWEIGHT.



I have a 2¾ h.p. two-speed two-stroke which has given me great satisfaction in regard to power. Will you kindly tell me if I should be doing any harm by fitting a light sidecar? I know the engine would be capable of taking it, but I am in doubt as regards the frame.—L.W.

The fitting of a sidecar to machines of this class is not to be recommended. The frame is not designed to withstand the strains of sidecar work, and in many cases the makers themselves refuse to guarantee the machines when so used.

EFFECT OF OVERSIZE TYRES.

We were arguing the other night in the mess on the advantages of 3in. tyres over 2½in. on motor cycles. One said that 3in. tyres on a W.D. model Triumph gave you more speed owing to the greater grip on the road. Several of us, including myself, said that the heavier tyre produced more drag and possible sideways roll, and consequent loss of speed. I should like to know, as a matter of interest, which of us you would consider right?—POKO.

The increased speed due to the fitting of a 3in. tyre is, of course, the result of the slightly increased gear ratio resulting on the greater diameter of the rear wheel when so fitted. With the larger diameter tyre, especially when softly inflated, there is more possibility of side-roll, and this is particularly noticeable with some makes.

The first sidecar taxi to be licensed in Oldham is very appropriately a 6 h.p. Bradbury. The district in and around Oldham is very hilly, but the machine has proved to have sufficient power to take the heavy sidecar with two people in addition to the driver.

READERS' REPLIES.

THE RESULT OF PRE-IGNITION.

From my own experience with an Autowheel engine, I should say that the cause of the knock "C.E.L. de S." complains of in his query, on page 179 of the issue of the 10th inst., is that the flywheel is loose on the shaft and that the key is not a close fit, and that the cure is to screw up the nut on the end of the shaft as tightly as possible. (Without some means of holding the flywheel, I doubt if he will be able to screw it tightly enough.) There is no doubt that the keyway in the shaft and/or flywheel is distorted, and the new key does not fit in the same way as the original one. The fact that the knock disappears when the release is lifted bears out this diagnosis, as, when released, there is no compression to overcome and so drive the flywheel tightly against the following side of the key to have the crankshaft suddenly driven forward against the key at the moment of ignition.—D. G. TAYLOR.

I have had the same experience with my old 2½ h.p. Levis, caused through pre-ignition, which not only stripped the key but widened the keyway in the shaft about ½in., with the result that when I fitted another key (which was fitted to the flywheel) and tried the machine I got a bad knock, which was due to the clearance between the key in the crankshaft. This key suffered the same fate as the first key, and badly damaged the shaft. I bored out and bushed the flywheel, had the keyway welded up in the crankshaft, the shaft reground, and the flywheel fitted without a key. This machine has been driven hard in a very hilly district, and has given no trouble since removing the key.—S. H. BEAN.

I noticed recently a correspondent enquiring about the above; and, having had exactly the same experience myself, I think he would like to know what had to be done. I tried twice to put new keys in the flywheel, but each time they sheared off (with the ignition retarded). On examination I found that the shaft was somewhat worn, so I obtained a new one. This had no keyway in it, and I found the old flywheel would not keep on, owing to the taper fit not being correct. I therefore had to get a new flywheel, and have had no trouble since fitting, and have covered about 500 miles since.—R. HARTLEY.

NO SPARK AT FULL RETARD.

I notice that "W.R." gets an inefficient spark at retard. I was up against precisely the same trouble with a 3½ h.p. high-compression engine, and had great difficulty in starting (on retard) until I fastened a clean copper wire round the *lower* metallic part of the outside of the plug, connecting the other end of the wire to any convenient metallic rod near the magneto; so long as contacts at both ends were good, I got easier starting and much more flexible retard-running. I was simply trying, of course, to "coax" the spark across the points by giving the current a first-class passage back to the magneto; but the improvement was undoubted. I did not try the method of strengthening a spark—by interposing a small spark gap, easily fitted on between the plug and magneto (attached to the plug, in fact; *e.g.*, a $\frac{1}{64}$in. gap). Perhaps "W.R." would find it useful. I took off the wire fitting mentioned above last Christmas, and the old difficulties returned.—C.S.B.

EXPERIENCES WANTED.

"W.H.S." (Cambridge). — 28×3in. tyres on 4 h.p. Douglas.

"H.B." (London, S.E.).—Brooks B600 saddle; weight distribution and its effect on steering when used solo.

"S.B." (Ilford). — 8 h.p. Enfield (Vickers engine), lubrication, consumption, practical hints.

"J.F.C." (Nottingham).—Norton 1920 4 h.p., shock absorber, speed on hills, oil and petrol consumption, general reliability.

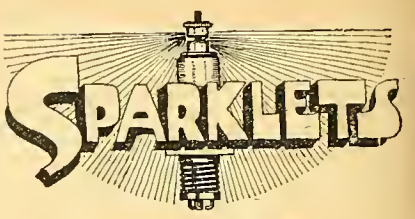
Wed. May 25th—A.C.U. Silencer Trial at Brooklands.

Tues., June 14th—Junior T.T. Race.

Thurs. June 16th—Senior T.T. Race.

Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup.



Wed., July 6th, and Thurs., July 7th—Arbuthnot Trophy Trial.

Sat., July 23rd—Motor Cycle Grand Prix Race in France.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Mon., Aug. 29th, to Sat., Sept. 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

Paragon Motor Cycles.

Owners of Paragon machines, the manufacturers of which have ceased business, may obtain spares from the Motor Works, Cressing Road, Braintree. A new machine, to be called the New Paragon, will shortly be marketed from the same address.

A Midland Motor Map.

Prepared by Jones's Garage (Lichfield), Ltd., the pocket map bearing the above title is a form of advertising which commends itself to whoever receives a specimen. The folder contains a road map showing the principal places within a forty-five mile radius of Lichfield, while detailed routes to all parts of England and Wales are given.

Controls to Work Both Ways.

In view of the fact that there is some diversity of opinion regarding the ideal direction for the operation of carburetter levers, it is worth recollecting that all the Amac instruments are provided with levers which work either inwards or outwards. The handle-bar clip is also provided with serrations which mesh with similar ones on the control body, so that the whole fitting can be placed in any position on the bars.

Spares for American Two-speed Hubs.

A number of Henderson four-cylinder motor cycles in 1914 were fitted with Eclipse two-speed gears, for which it has not been possible to obtain spare parts for some considerable time. Messrs. Robertsons Motors, Ltd., 157b, Great Portland Street, W.1, inform us that they have just received a large consignment of these parts and can now supply them from stock.

Motor Cycles for Hire.

Although the provincial motor cycle dealer does not yet appear to favour the hiring out of machines, several London agents are developing this branch of the business. The motor cyclist without a mount may become the temporary owner of one (by the hour, day, or week) either through the agency of Messrs. Robertsons Motors, Ltd., 157b, Great Portland Street, W.1, or Messrs. Maudes' Motor Mart, 100, Great Portland Street, W.1.

Albion Gears.

In addition to their plain two-speed gear and the gear box with clutch and kick-starter, the Albion Engineering Co., Ltd., of Tower Works, Upper Highgate Street, Birmingham, are now manufacturing a gear box with a clutch but without kick-starter, as they find that there is a considerable demand for this type of box without the additional complication of the starting device. The clutch may also be fitted to the majority of Albion plain two-speed gear boxes.

The Price of Petrol.

When will the price of petrol come down? The enormous importations during December last suggest that supply is overtaking demand.

On the Brighton Road.

That the Roads Improvement Association does not confine its activities to purely technical aspects is evident from its recent success in obtaining better level-crossing service at gates on the main London-Brighton road.

Widening Fields for British Trade.

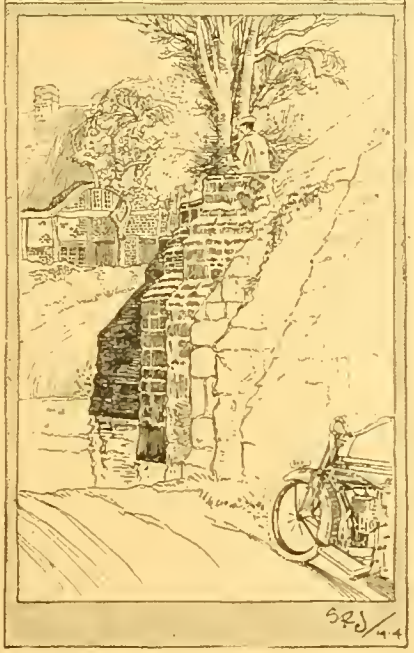
China has hitherto been a very difficult trading country for the British manufacturer or merchant, but recently a comprehensive charter was granted to a British Corporation (in course of formation, and to be capitalised initially by traders and manufacturers only) which will considerably facilitate matters. There is undoubtedly a huge potential market in China for the British motor cycle.

Reliability Trials.

There are plenty of reliability trials in New Zealand. Most of the competitors, however, appear to be owners of American motor cycles.

At the monthly meeting of the Otago Motor Club some comments were made concerning the manner in which the competition was run. Complaints were made that the competitors did not keep up a consistent average speed—they had slowed down at times so as not to be at the controls before schedule, and accelerated in other parts of the journey. A suggestion was made that the system of secret checks should be reintroduced.

Imports and Exports.



Importation of motor cycles, as shown by extracts from the Board of Trade returns for January given below, is on the increase. Approximately £10,000 worth more than in December entered this country last month. Export figures during the same periods, however, show an increase of almost identically the same amount. Comparative tables for three years follow:

IMPORTS.

	January, 1913.	January, 1920.	January, 1921.
No. of motor cycles..	137	767	136
Value of machines and parts	£10,529	£38,265	£27,260

BRITISH EXPORTS.

	January, 1913.	January, 1920.	January, 1921.
No. of motor cycles..	1,289	1,123	1,203
Value of motor cycles only	£54,526	£84,132	£106,172
Value of parts ..	£15,080	£42,698	£54,511
Total value ..	£69,609	£126,830	£160,683

Brooklands a. Easter.

The Brooklands Automobile Racing Club will hold their usual race meeting on Easter Monday, March 28th, beginning at noon prompt. There will be no motor cycle races, but the last race will be the Easter Cycle Car Handicap, distance about 5¾ miles, for motor cars and cycle cars in racing trim, propelled by means of internal combustion engine only, the cubic capacity of which is less than 1,100 c.c. There are five other car races down for decision, and a most interesting day is indicated.

Newly Licensed Harley Stolen.

A 1918 Harley-Davidson combination, with licence card in a Smith's holder, owned by Mr. R. Boxer, of the Woolwich Club, was stolen the other night from a garage at Wickham Road, Brockley, S.E. The burglars cut two padlocks. The carburetter jet was removed overnight, and the back tyre was flat! We understand that Mr. Boxer had not received his registration book. The following morning the sidecar was seen being pushed in New Cross Road towards London.

THURSDAY, MARCH 17th,
THE MOTOR CYCLE
ANNUAL SPRING NUMBER AND BUYERS' GUIDE

Special Features.

WINTER WORK IN THE GARAGE.
INTO THE TEETH OF THE STORM.
A ROAD TEST IN THE ALPS.

Native Support.

We understand that the Braddan Motor and Cycle Depot, 47, Athol Street, Douglas, Isle of Man, intend entering a 2¾ h.p. Blackburne motor cycle for the Junior Tourist Trophy Race.

To Manchester Readers.

A considerate Manchester club asks us to warn our readers of great police activity, particularly on Sunday afternoons, on the Manchester-Chester road. Danger zones exist in the neighbourhood of Bucklow Hill, and also Plumbley.

Magneto Manufacture a Key Industry.

Magnetos and permanent steel magnets are included in the Government's list of key industries which are to be protected by the new fiscal scheme. Imports are to be prohibited save by licence of the Board of Trade. The Key Industries Bill, which will not be presented until after Easter, does not include such a large number of industries as has been anticipated.

No Shortage of Petrol!

32,124,702 gallons of motor spirit were imported last month as against 12,381,806 in December, and 9,459,689 during January, 1920. The figure for the first month of 1921 is actually nearly double that of the monthly average for 1920. Truly, this promises to be a motoring year; although the removal of the tax may in part be responsible for this striking increase.

French Motor Cycle Championships.

The Competitions Committee of the U.M.F. has decided to consider the question of establishing motor cycle championships in France. Two classes are in view, the French speed championship which will be run off about the same time as the Motor Cycle Grand Prix, July 23rd, and the French touring championship, which will be run off during different touring events which will finally be decided by the Competitions Committee of the U.M.F. The first trial chosen is the Paris-Nice.

These championships will only be open to riders of French nationality. The touring championship of France will also serve to determine the French team in the International Six Days Trial to be held at Switzerland, August 1st to 6th, of which the preliminary details were given in the issue of *The Motor Cycle* of February 3rd. We understand that three trials (of which Paris-Nice is one) in the U.M.F. fixture list will serve to select the team to represent France in the above International competition.

Comparative Road Speeds.

A good rabbit can attain 25 m.p.h., says *The Autocar*. Recently a reader of *The Motor Cycle* asserted that the speed of a hare is 40 m.p.h.

Not an Unmixed Blessing!

Dry roads last week-end disturbed the Puncture Fiend's winter sleep somewhat prematurely. Considerable activity is reported in the repair outfit trade.

The London-Edinburgh Run.

Applications for membership to the M.C.C. for the purpose of competing in the London-Edinburgh Whitsuntide event must be received by the club before Tuesday, April 19th.

Institution of Automobile Engineers.

The next ordinary general meeting of the Institution of Automobile Engineers will be held on Wednesday, March 2nd, at the Institution of Mechanical Engineers, Storey's Gate, St. James's Park, London, S.W., at 8 p.m., when Dr. W. H. Hatfield will read a paper on "Automobile Steels." Cards of invitation for the meeting may be obtained by those interested on application to the secretary of the Institution, 28, Victoria Street, London, S.W.I.

Some Gems among the Queries.

The other day one query was accompanied by a letter to the effect that the writer enclosed a cheque for the half-yearly instalment of his income tax. [No cheque was enclosed.—ED.] Next day an envelope arrived, duly sealed, but with nothing inside it; while recently a reader wrote stating that he found the spanner he was using was attracted to the magnets of his magneto, but it was not attracted to the aluminium base plate—did we think there was a short-circuit anywhere?

Signs of Spring—On the Motor Cyclist's Calendar.

Starting on the first Saturday of March, with the Colmore Cup Trial, there will be at least one important competition each week-end until further notice.

A Belgian Motor Cycle Grand Prix.

A triangular course, Francorchamps-Stavolot-Malmedy, is the venue for a proposed Belgian Grand Prix race for motor cycles, towards the end of August, and immediately after a "three-litre" car event. Organisation and details of the motor cycle meeting are in the hands of the "Fédération Motocycliste de Belgique." We understand that the "F.-S.-M." circuit is not so difficult (of pronunciation!) as it looks.

The Racing Bugatti.

Motor cyclists who delight in obtaining the maximum amount of power from their engines should be particularly interested in an illustrated article which appears in to-morrow's issue of *The Autocar* descriptive of the sixteen-valve racing Bugatti which won the Grand Prix des Voiturettes at Le Mans. The engine, which has a capacity of 1.353.24 c.c., averaged 57.6 m.p.h. for 256½ miles on the road. Its total weight is 13 cwt.

Big Twin Solos in the London-Land's End.

Those competition riders of pre-war days who knew of the friendly rivalry between Harold Karslake and George Brough will be interested to know that the former will ride a Brough Superior in this year's London-Land's End event. Competition between these two expert riders will be very keen. Incidentally, Karslake has severed his connection with the trade, and will ride as a private owner.

BRITISH INDUSTRIES FAIR

AN admirable opportunity for examining British goods is provided for Overseas buyers by the British Industries Fair. Divided in three centres—London, Birmingham, and Glasgow—the Fair opened on Monday last, and will continue for a fortnight from the opening day. As far as motor cyclists are concerned, the chief interest lies in the Midlands display held at Castle Bromwich, for in the enormous buildings which lie beside the late aerodrome are housed the motor cycle exhibits. There is not a large number of exhibitors, of motor cycles, and there is little that is new in this line to be seen, nevertheless Overseas and foreign buyers will find worthy representatives of all classes. Such names as the Sunbeam, A.J.S., B.S.A., Beardmore-Precision, Blackburne, Levis, Radco, and others are included in the list; whilst among those who display accessories and fittings are Messrs. Herbert Terry, Apollo, Easting, Accles and Pollock, Miller, the Leatheries, Clayton-Wright, Cox Carburetters, Best and Lloyd, etc.

The exhibition is a purely business affair, but is nevertheless full of general interest. Plant and machinery, household fittings, sporting accoutrements—indeed, almost every branch of industry is represented; and on the occasion of our first visit (before the Fair was opened), a cold raw day and an atmosphere of straw and packing-cases made us feel particularly grateful to those manufacturers of patent grates who exhibited working models. The catalogue, sold at the somewhat high figure of 5s., is worth every penny of its cost. Printed in three languages, it includes such a wonderful method of cross indices that one can find the required exhibit with the minimum of trouble.

Prices of Second-hand Motor Cycles.

A Schedule of Prices at which used and shop-soiled Motor Cycles were being offered in the miscellaneous advertisements of last week's issue of "The Motor Cycle."

MAKE, H.P., AND DATE.	CLASSIFIED PRICES.	AVERAGE PRICE.

The 1921 Paris-Nice Trial

The Start of the Trans-France Event. An Inspection of the Competing Machines. Many Two-strokes and Some Interesting Cycle Cars.

THE Paris-Nice reliability trial does not appear to have suffered in any way from the unfortunate incidents of last year, for the event attracted almost one hundred competitors in the ten different classes, who were started away early last Monday morning from the suburbs of Paris. There are not quite so many British riders as a year ago, but just as many English machines, entered by French agents. It may be estimated that 95% of the competitors are professional riders, for the French amateur shows no enthusiasm for trials and competitions in which only medals or diplomas can be won.

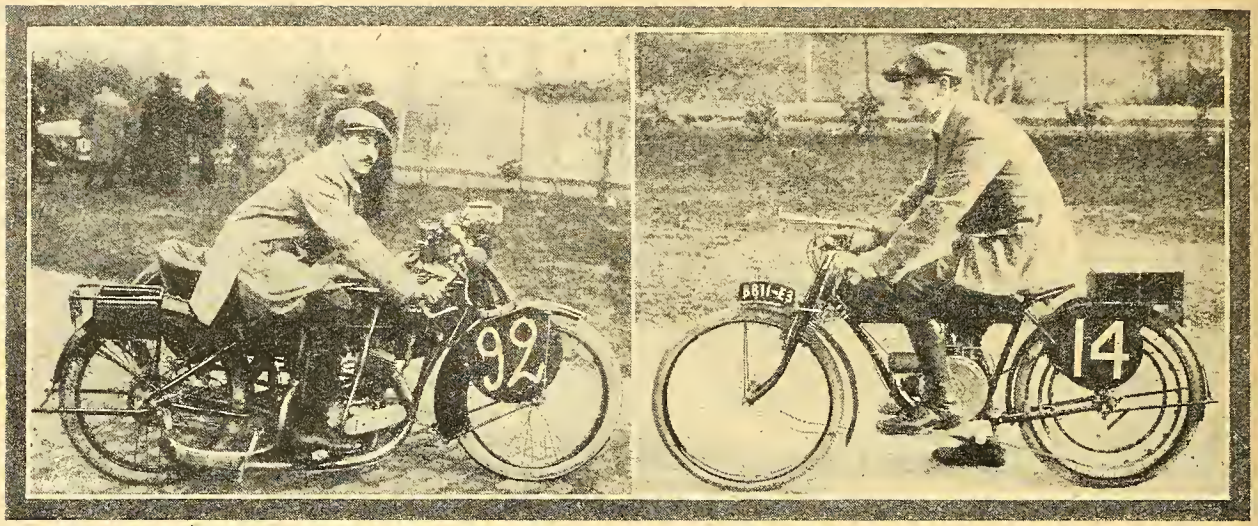
Cycle Car Interest.

The increased numbers are found in all classes of machines, from the lightweights of 250 c.c. to the 1,100 c.c. cycle cars. It is in this latter class, however, that there is the greatest increase, and this is indicative of the rapidly growing interest of the cycle car in France. The Morgans and G.N.'s are naturally well-known to British motor cyclists, and will be considered as British machines. Both these makes, however, are now built in France. The G.N. has been taken up by the Salmson Aviation Engine Co., and the Morgan is constructed under licence by the former agents. It has been found necessary to strengthen the frame of the Morgan for French roads; and, owing to the higher speeds obtainable on the Continent, the water-cooled engine is used to the almost total exclusion of the air-cooled type. The de Marçay machines, produced in a former aviation factory, made their first appearance in a public competition in France, and for their *début* two of the four mounts were handled by English drivers. The Griffon is another French cycle car appearing for the first time in a public competition. The Monitor also is a newcomer, built very much on the lines of the A.V., with a two-cylinder M.A.G. engine.

One of the features of the trial is the large number of two-strokes entered. Undoubtedly, the most interesting of these is the new Peugeot, with single-cylinder two-stroke engine and chain-cum-belt drive. As a contrast, there was entered one of the racing type Peugeots with a single-cylinder having four valves in the head. The Peugeot Co. not long ago purchased the Terrot and the Magnat-Debon motor cycle concerns, and it is obvious that much of the practice of these two firms has been incorporated in the new two-stroke machine.

The biggest single team in the trials is the A.B.C., with seven mounts. These machines are now produced entirely in France at the Gnôme and Rhône factory, and have several detail changes on the original English design. Belgium sent for the first time a team of Saroleas, composed of the new two-strokes produced since the war. Italy was represented by two makes—a Stucchi and a Frera. The American mounts were Indians, Harley-Davidsons, and Excelsiors, all ridden by French agents.

A Luxurious Machine.



Motosacoche put in three machines, two of them being 500 c.c. solos, and the third a very handsome 1,000 c.c. twin with M.A.G. engine and three-speed gear. This machine was one of the most elaborately equipped in the competition. It had a really substantial V windscreen of pressed steel with Triplex glass, spare wheel, and electric lighting.

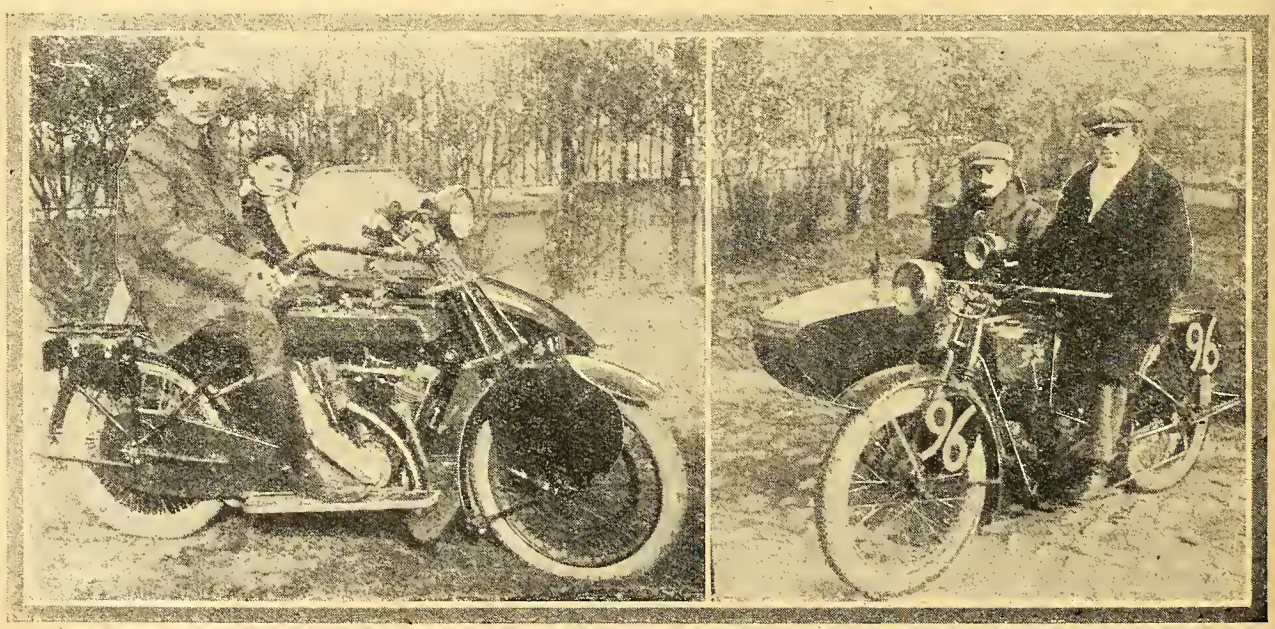
The route selected for the Paris to Nice trial is not the most direct, for, in order to add somewhat to the difficulties, a *detour* is made in order to in-

C13

THE STAGES OF THE TRIAL.

Monday (Feb. 21.)	*Montegeron, Fontainebleau, Sens, Auxerre, Avallon, Précy sous Thil, Sombernon, Dijon.*
Tuesday.	*Dijon, Beaune, Monceau les Mines, Paray-le-Monial, St. Martin-du-Lac, Roanne, Feurs, St. Etienne, Lyon.*
Wednesday.	*Exhibition of Machines at Lyon.*
Thursday.	*Lyon, Vienne, St. Vallier, Valence, Lortol, Montélimar, Pierlatte, Orange, Avignon.*
Friday	*Avignon, Orgon, Lambesc Aix, St. Maximin, Le Lue, Fréjus, Cannes, Nice.*
Saturday.	*Starting and Flexibility Tests. Flying Kilometre Speed Test.*
Sunday.	*La Turbie Hill-climb*

Big twin and auxiliary motor. Hughues (8 Frera sc.) and Trouche (1½ Evans cyclomotor).



clude Dijon, and another one in order to get in the towns of St. Etienne and Lyons. In this way, the distance is increased from 560 miles by the most direct route to 694 miles, which have to be covered in four stages, namely, Paris to Dijon, 188 miles; Dijon to Lyons, 202 miles; Lyons to Avignon, 140 miles; and Avignon to Nice, 164 miles. A whole day is spent at Lyons, in order to exhibit the machines; and, after arriving on the Riviera, starting, flexibility, and speed trials are held, in addition to a hill-climb up La Turbie.

Road Conditions Not Severe.

Road surfaces have improved enormously since last year, and, as there are few hills, except in the neighbourhood of St. Etienne and Lyons, the trial cannot really be considered a very difficult test. The average tourist, whether on a car or on a motor cycle, makes the run in two and a half days, while three days may be considered a maximum for this journey under normal conditions. It is necessary, therefore, that the organisers should be very exacting in their application of the rules, which call for an average of thirty kilometres (18⅝ miles) an hour, and the accomplishment of the entire trip without changing any essential part of the machine. The preliminary work, in Paris, where the machines were weighed, measured, and sealed, was very carefully done; and if there is the same rigorous control on the road, the results of the competition, ought to be interesting. The officials objected to inefficient silencing on several of the French machines. The petrol situation this year is normal.

Last year there were sixty-nine entries (of whom forty-three finished). The paucity of British riders this year, if understandable, is, nevertheless, regrettable, for it is desirable that the representatives of the two great nations should meet in competition, and not only from the point of view of machine design. Of course, the main reason for the absence of English entrants in this particular event is the unfortunate *débâcle* that occurred at the conclusion of the 1920 trial; but there is also a strong feeling abroad, not without justification, that, while a very pleasant tour, the Paris-Nice is too easy to test thoroughly the ultra-reliable modern machine.

La Turbie, to be climbed on the last day, is a sinuous ascent, but as the road could not be cleared for the contest last year, accidents were narrowly averted.

Competitors on Swiss and American sidecars. (Left) Doerr on the 1,000 c.c. Motosacoche and (right) Suller with his American X.

LIST OF STARTERS IN THE PARIS-NICE TRIAL.

On Monday last the competitors started from Paris with Dijon as their first objective. The following is a complete list of machines in the trial with the drivers' names in parenthesis.

CLASS 1.—250 c.c.

Radco (Colombel).	Motosolo (Clech).
Radco (Girard).	Diamond (F. J. Price).
D.F.R. (Pierre).	S.C. (Lézin).
Velocette (Denley).	S.C. (Sexé).
Velocette (Humphreys).	Cleveland (Ponlet).
Velocette (Berger).	Cyclomotor (Pouget).
Alcyon (Lehman).	Cyclomotor (Trouche).

CLASS 2.—350 c.c.

D.F.R. (Dubost).	Yvel's (Pernette).
D.F.R. (Boulangier).	Yvel's (Sarradet).
Edmund (J. C. Walker).	Yvel's (Bauer).
M.C. (Moret).	Peugeot (Péan).
Yvel's (Vernisse).	Peugeot (Lessmann).

CLASS 3.—500 c.c.

Norton (Bastide).	Rudge (Duverne).
Norton (Barthelemy).	Norton (Dard).
Norton (Lazerge).	Blériot (Le Bris).
A.B.C. (———).	Blériot (Contant).
A.B.C. (Borgotti).	Blériot (Brunet).
A.B.C. (Detruche).	A.B.C. (Veringa).
A.B.C. (Bartlett).	Triumph (Gahriel).
A.B.C. (Smetts).	Motosacoche (Lapallud).
A.B.C. (Bernard).	Motosacoche (Robert).
A.B.C. (Rolly Gonnet).	

A French cycle car on the lines of the A.V.—the Monitor, driven by Rouquet.

To show the efficiency of a representative British two-stroke. The Velocette team—Denley, Berger, and Humphreys

CLASS 4.—750 c.c

Sarolea (Benlhoux).	Griffon (Jacquin).
Sarolea (Lefevre).	Triumph (Pinney).
Sarolea (Rivet).	Triumph (G. Wren).
Zenith (A. Ellison).	Rover (Sollet).
Zenith (Kaye Don).	Rover (Brandish).

CLASS 5.—1,000 c.c.

Harley-Davidson (Bonnard).

CLASS 7.—500 c.c. (Sidecars).

Rover (L. Psalty).	Cottin (Cottin).

CLASS 8.—750 c.c. (Sidecars).

Griffon (Bourry).	G.L. (Lacour).

CLASS 9.—1,000 c.c. (Sidecars).

Matchless (Gaillard).	Harley-Davidson (J. Kenneth Flemons).
Matchless (Leymarie).	Sunbeam (P. W. White)
Indian (G. Arnaud).	Frera (Hughues).
Indian (Vache).	Stucchi (F. Delaunay).
Indian (R. Berthe).	Indian (A. Temple).
Harley-Davidson (Vernault).	Harley-Davidson (Collet).
Harley-Davidson (Jean Psalty).	Excelsior (Chappaz).
Harley-Davidson (Marcel Walbrou).	——— (Sutter).
A.J.S. (G. Fenton).	Motosacocho (Doerr).

CLASS 10.—750 c.c. (Cycle Cars).

A BUSINESS TRIP TO THE NORTH.

OWING to the abnormal state of the trade of the country a representative of *The Motor Cycle* devoted the greater part of last week to a tour amongst some of the Northern manufacturers, with a view to ascertaining how far existing conditions might influence future prices and the prospects of business generally.

In the Midlands there is already a growing spirit of optimism; it is felt that conditions are likely to "ease" somewhat, and that a normal springtime demand will be experienced. Signs are not lacking that the motor cycle public is already beginning to take interest in its annual selection of the new mount; and although many may be withholding their orders in the hope of a price reduction, makers are receiving a steady flow of enquiries regarding the specific details of particular models. This state of affairs is found to obtain in the Manchester district, where it is confidently felt that a new boom will be forthcoming.

Reception at New Royal Ruby Works.

On Thursday last the directors of the Ruby Cycle Co., Ltd., invited representatives of the technical press to inspect the new works erected at Altrincham. The party was conducted throughout the entire plant, which is on a most up-to-date and modern plan, operating in a large and well-lit factory comparable with the best of its kind in this country, and capable of dealing with an output of 5,000 motor cycles and 10,000 pedal cycles annually.

As is well known, the Royal Ruby has a very complete system of frame springing, and an examination of this throughout the process of manufacture showed the amazing amount of care and attention which has to be bestowed on the production of a high-class machine.

Some Manufacturers' Opinions.

The makers of the New Scale machines were quietly confident that increasing business would shortly be expected. Enquiries were being received in increasing numbers, the special lines of this firm (light and mediumweight sidecar outfits) being apparently of special attraction in these days of economy. Prospect of prices reduction on an extensive scale was remote, but slight improvements in the machines were possible owing to more favourable prices of certain components.

Mr. Harry Reed, of the Dot Motor Co. attributed the hiatus in the motor cycle trade largely to the difficulties in the way of export, but was optimistic in his views upon an improvement of the home market about Easter.

With only one exception, and that one an accessory manufacturer, every one with whom the motor cycle movement was discussed anticipated a plentiful influx of orders during the Easter-Whitsuntide period: while several predicted that the real boom in motor cycles was not the artificial rush of 1919 but the demand which may be expected in 1922-23.

FORTHCOMING TRIALS.

Particulars of the London-Land's End Run, Colmore Cup, and Victory Cup Trials, and the Western Centre (A.C.U.) Two Day Event.

THE VICTORY CUP TRIAL.

LAST year no fewer than 177 entries were received for the Victory Cup Trial, organised by the Birmingham M.C.C., being the largest entry in any open trial during the 1920 season. This year, however, it will be open only to members of the clubs forming the Midland Centre A.C.U., which embraces the Birmingham, South Birmingham, Sutton Coldfield and North Birmingham, Coventry and Warwickshire, Midland C. and A.C., Kidderminster, Nuneaton, and Wolverhampton Clubs. As practically all the competition riders who have supported the event in the past are members of one or another of these clubs, a record entry is again anticipated.

The trial will be a test of reliability and hill-climbing, at least two hills with a maximum gradient of 1 in 3 being included; but there will be nothing "freakish," in the way of hills or roads on which baulking might take place.

A novel feature is that four-wheelers, *under 8 cwt. and 1,100 c.c.*, may compete on equal terms with sidecars and three-wheelers. This year gold medals will be awarded to all competitors who lose no marks in non-stop sections, and are inside the three-minute time allowance at all timed checks. Competitors who lose not more than ten marks will be awarded silver medals.

There will be an acceleration test (*The Motor Cycle* formula being used) on a suitable hill, but marks cannot be lost in this test, which is simply to determine the winners of the following awards in the event of a tie or ties:

"The Victory Cup" (presented by the Right Hon. The Lord Calthorpe) to the competitor who makes the best performance of the day. (Present holder, A. Milner.)

"The Midland Cup" for the best passenger machine performance. (Present holder, J. E. Greenwood.)

"The Duke Cup" for the best performance by a solo machine over 275 c.c. (Present holder, F. A. Applebee.)

Entry forms and full particulars of the trial can now be obtained from the hon. secretary, Mr. W. H. Egginton, 76, Earlsbury Gardens, Birchfields, Birmingham. The trial takes place on Saturday, March 19th, entries closing on March 12th.

THE LONDON-LAND'S END.

THE M.C.C. intends to make this year's competitors in the London-Land's End run earn any awards they may secure. Several innovations have been introduced, which are in the nature of an experiment. For instance, a momentary stop on Porlock will not necessarily lose a competitor his gold medal, and a regulation has been introduced which, to a large extent, rules out the element of luck and trouble so often caused by baulking. This regulation is a time limit for the sections which include the test hills.

An indication as to the task set for aspirants to the premier award is shown in the following conditions which have to be fulfilled to win a gold medal, for it will be awarded to competitors who are:

(1.) Not more than fifteen minutes early at any point of the journey.

(2.) Not more than five minutes late at the bottom of Porlock.

* (3.) Not slower than 18 m.p.h. for the three miles commencing near the Ship Inn at Porlock.

† (4.) Not more than five minutes late at the top of Lynton Hill.

(5.) Not more than fifteen minutes late at any part of the journey.

* This section includes the ascent of Porlock Hill.

† This portion includes about nine miles of moorland road, the descent of Countisbury and the ascent of Lynton.

The start will be from near the Berkeley Arms Hotel, Cranford Bridge, Hounslow, at 10.1 p.m. on Good Friday, March 25th, the order of starting being as follows: Solo motor cycles, sidecars, three-wheeled cycle cars, and light cars. The route will be through Maidenhead, Reading, Newbury, Hungerford, Marlborough, Devizes, Trowbridge, Frome, Bridgwater, Minehead, Porlock, Lynmouth, Lynton Hill, Barnstaple, Holsworthy, Launceston, Bodmin, Truro, Penzance, and Land's End, at which place the first competitor will be due at 4.5 p.m. on the Saturday.

Controls will be arranged at Bridgwater (130½ miles) and Launceston (232½ miles), and the total mileage will be 314.

Entries close on Tuesday next, March 1st, and should be sent to the trials hon. secretary, Mr. B. Alan Hill, Apsley, Fellows Road, S. Farnborough, Hants.

THE COLMORE CUP TRIAL.

ENTRIES for the Colmore Cup Trial on March 5th close on Saturday next, February 26th, so that there is little time left for those who wish to enter in this classic Midland event, and have not already done so. Although not open this year, its scope is still very wide; for all members of clubs in the Midland Centre A.C.U. are eligible. The route is the same as in 1920, viz., Stonebridge *via* Warwick, up Saintbury down Willersey, and up Sndeley to Cheltenham and return, including Rising Sun, the Sudeley hairpin, and the ascent of Willersey; but in addition to the usual awards (the Colmore Cup, the Calthorpe Trophy for machines under 250 c.c., and the Levis Cup for the best single-geared performance) there is a special prize for the best performance of any team. Any three riders may constitute a team, which may be nominated by themselves, their club, or a manufacturer.

Additionally to motor cycles and both types of three-wheeled passenger machines, monocars are eligible provided they comply with A.C.U. definitions.

As in previous years, the event is a non-stop one throughout, and marks will be deducted for touching the ground with the feet. This method of scoring, given slightly wet roads, generally proves a very successful eliminating medium.

The entry fee is one guinea; and the secretary of the club from whom all information may be obtained, is Mr. Phil Mosedale, "The Nook," Maney Hill Road, Sutton Coldfield, Birmingham.

WESTERN CENTRE A.C.U. TWO DAY OPEN TRIAL.

IN *The Motor Cycle* of February 10th, we touched on the Western Centre A.C.U. Open Two Day Trial, to be held on April 8th and 9th, more particularly with regard to the checking system and award list. On this page will be found a map of the course with alternative routes. There are four non-stop hills each day, as follows:

Friday.—Llanfillo, Mynydd Effynt, Cynau, Ystwyth Valley.

Saturday.—Pencarreg, Caio, Llanddewfi Cwm, Trevador.

Entries at ordinary fees close on Tuesday, March 22nd, but late entries may be accepted at double fee up to Saturday, March 26th. Mr. J. A. Newman, of St. Moritz, Wyche Road, Malvern, is the hon. trials secretary.

Proposed course of the Western Centre A.C.U. Two Day Trial, Friday and Saturday April 8th and 9th.

Essex M.C. One Day Trial.

Double Circuit Event including Fast and Slow Hill-climbs.

THERE were very few failures in the One Day Trial held by the Essex Motor Club on Saturday last. Competitors assembled in the early hours of the morning at the Castle Hotel, Woodford, the route being *via* Chingford, Lippitt's Hill, High Beech, Church Waltham, Low Hill, Harlow, Moreton, Ongar, Standon, Kelvedon Hatch, Passingford Bridge, Abridge, Chigwell, and thence back to the Castle Hotel, Woodford. Two circuits of this course had to be made, one in the morning and one in the afternoon.

Tests *en route* included a fast and slow hill-climb up Low Hill in the morning, and a stopping and restarting test in the afternoon.

In giving the best performances in each class it would be well to bear in mind that all results are so far provisional pending any protests lodged by competitors or the reports of observers so far not to hand. The following riders claim non-stop runs :

B. Morris (2¾ Coulson B).
H. R. Harveyson (3½ Indian Scout).
S. M. Greening (3½ Sunbeam).
F. Roberts (3 A.B.C.).
A. C. Rhodes (3½ N.U.T.).
A. G. Martin (4 Triumph).
H. Le Vack (4 Indian Scout).
E. Elliott (4 Indian Scout).
E. J. Anderson (3½ Scott).
W. S. Parson (8 Matchless).
F. N. Edwards (6 Enfield).
C. W. Bairstow (7 Indian).

So far J. V. Prestwich (2¾ Diamond) is the only rider who is reported as having failed to finish.

In the slow and fast hill-climb held during the morning circuit the best performance in each class is reported as follows :

CLASS 1 (not exceeding 350 c.c.).—F. W. Applebee (2¼ Levis).
CLASS 2 (not exceeding 500 c.c.).—S. M. Greening (3½ Sunbeam).

E. A. Bridgman (7 Indian sc.) in the fast hill-climb.

CLASS 3 (not exceeding 750 c.c.). H. Le Vack (4 Indian Scout).

The following riders were penalised for failing to restart within the stated time after the luncheon hour :

B. Morris (2¾ Coulson B).
A. G. Martin (4 Triumph).
C. W. Bairstow (7 Indian).

In the stopping and restarting test held during the afternoon the best performance in each class may be given as :

CLASS 1.—B. Morris (2¾ Coulson B).
CLASS 2.—S. M. Greening (3½ Sunbeam).
CLASS 3.—H. Le Vack (4 Indian Scout).
CLASS 7.—E. A. Bridgman (7 Indian).

Weather conditions were favourable and the roads dry.

CLUB NEWS.

Yeovil and District M.C.C.

The annual general meeting of the Yeovil and District M.C.C. will be held at the Masonic Hall, Yeovil, to-morrow (Friday), at 8 p.m.

Wallington and District M.C. and L.C.C.

The club will hold a social run to the Hut Hotel, Wisley, on February 27th, when it is hoped a large number of members will be present. The first competition to be held will be a speed hill climb on March 19th.

Bristol M.C.C. and Bath M.C.C.

These flourishing Western clubs again met in a social manner on Saturday, February 12th, when the Bath Club paid a return visit to Bristol. A fine crowd of members met at Keynsham, and, riding into the city in single file, between fifty and sixty machines, solo and sidecar, with half-a-dozen cars, they caused a mild sensation. A tour of the city and Clifton, including the far-famed Durdham Downs, led to tea at the Bristol headquarters, where nearly one hundred assembled. Afterwards the party adjourned to a local theatre.

North London M.C.C.

The last social event of the winter season, held on February 12th, took the form of a concert by the "Sparklets." The evening was much appreciated, and the attendance very much larger than was expected. A further reminder is given of the opening run, starting from the Orange Tree, Friern Barnet Lane, at 2.45 p.m. on Saturday next, the 26th, to which a cordial invitation is given to all motor cyclists in the district.

Sunderland and District M.C.

At the annual general meeting, held on February 4th, there was a large gathering of old and new members. The coming season promises to be one of the most successful in the history of the club, which is in a prosperous condition financially.

A very attractive programme has been drawn up of social and competition events, and two valuable trophies have been presented to the club by local gentlemen for competition.

All motor cyclists in the Sunderland district who are not members are cordially invited to join the club.

Rugeley and District A.C.

This newly-formed club is holding an opening run to Bridgnorth on the 27th inst., starting at 10.30 a.m. from headquarters, the Vine Hotel. All local motor cyclists are invited.

Woolwich and Plumstead M.C.C.

Over a hundred, including many ladies, were present at the Woolwich Club's annual dinner at the "The Shakespeare," Woolwich, on February 17th. Capt. T. Ross said fourteen competitions had been arranged this year, and also several gymkhanas and picnics in Kent. Mrs. Collier presented the prizes.

Worcester and District M.C.C.

Mr. W. T. Thorne continued his series of excellent lectures at the Pack Horse Hotel, Worcester, on Monday, February 14th, his subject for the evening being "Tracing Troubles," which was an excellent guide to the amateur owner-driver in tracing the symptoms of any troubles that might arise, and the cure thereof. After this lecture questions were invited, and several new troubles exposed. His next lecture is on the 28th inst.

Club News.—

Proposed West Central London M.C.C.

Mr. Marcel Clement, 17, Russell Square Mansions, Southampton Row, W.C.1, would be pleased to hear from any enthusiastic motor cyclists in this district with the view to forming a club as above.

Rotherham and District M.C.

There was a large attendance of motorists at the first meeting of the club held in the Y.M.C.A. rooms, Rotherham, and the officers for the year were elected. It was decided to hold the first run on March 20th to Worksop, meeting in Corporation Street at 2.30 p.m.

Faraday House Engineering College M.C.C.

In spite of pouring rain, a keenly contested hill-climb (on formula) was held at Whelpley Hill, Herts. The hill has a gradient of about 1 in 8 for two hundred yards, which is followed by two hairpin bends. The surface, being of chalk, was not improved by the rain, and the small number of mishaps speaks well for the riding. The event was won by K. M. A. Ramsay (3½ Sunbeam). Second place was obtained by W. Rochford (4 Triumph), who made a fast, steady climb, and judged the corners well.

Midland Centre A.C.U.

Various matters in connection with forthcoming competitions were discussed at a meeting held at Birmingham on February 12th. Preliminary arrangements were made regarding an open reliability trial to start from Redditch on April 23rd. Two other open trials are fixed for September 17th and November 5th. On April 30th there will be a team trial open to teams from clubs in the centre only, each club to send seven riders, and the five best performances to count. Thus it is hoped to eliminate the luck-cum-puncture element.

South Birmingham M.C.C.

More in the nature of an enjoyable holiday run than a gruelling trial an Easter reliability run to Lynmouth will start on Saturday, March 26th. A return will be made on the following Monday. Prizes include the Mitchell and Cooper cups, gold, silver, and bronze medals, and marks towards the Joyce Shield and Allday Cup.

On Friday last week the club held their annual dinner at the Mermaid Hotel.

THURSDAY, MARCH 17th.
THE MOTOR CYCLE
SPRING NUMBER AND BUYERS' GUIDE.

Special Articles and Illustrations are in course of preparation for the Annual Spring Number of this Journal. In addition to topical features, this enlarged issue will contain an Illustrated Buyers' Guide of 1921 Models.

Westmorland M.C.C.

Motor cyclists in the North will be gratified to hear that the Westmorland M.C.C. is again holding its open hill-climb on Orton Scar, near Kendal, on Easter Monday, March 28th. Last year over 2,000 spectators spent Easter Monday on the bracing moorland, witnessing this well-conducted event. A full list of classes is arranged, and entry forms are available. Motor cyclists are reminded that Orton Scar is only fifty miles from Richmond, Yorkshire, at which the annual rally organised by the Yorkshire clubs is being held on Good Friday. A splendid opportunity, therefore, occurs of including both these events and of spending a week-end in the Lake District.

Brookdale M.C.C.

Sixty motor cyclists were present at the Brookdale M.C.C. opening run to Keston (Kent). All signed on, and agreed to attend the general meeting at the Brookdale Hall, Catford, when the re-formed club will be formally started.

Proposed Herts County M.C.C.

There is strong evidence that a club for the whole county of Hertfordshire, with central headquarters, would be very popular amongst keen men in the district, and a meeting has been arranged for 7.30 on Saturday evening, March 5th, at the Red Lion Hotel, Hatfield. It would greatly help the organisers if those intending to be present would send a card to Mr. C. F. Plowman, 37, Broadwater Avenue, Letchworth, Herts, beforehand.

Northern M.C. (Newcastle-on-Tyne).

At the recent annual general and committee meeting of the Northern M.C., the following officers were elected for 1921: President, Sir Alexander Leith; chairman, Major W. Anderson, D.S.O.; hon. secretary, Mr. O. L. Rütter; hon. treasurer, E. E. Oldershaw; and joint sports secretaries, Messrs. R. Detchon and Jas. Percy.

It will be remembered that this club originated out of the national coal strike in early 1920, when about forty gentlemen offered their services to the Government, and were employed by the local Food Controller. Out of this beginning, the club has grown to its present size of 150 members. It is essentially an amateur club administered by amateurs for amateurs, although trade members are welcomed, as co-operation with the trade is desired. The annual subscription is 15s., and an entrance fee of 5s. for new members. All communications to be addressed to the hon. secretary, Northern Motor Club, 194, Cartington Terrace, Heaton, Newcastle-on-Tyne.

ANNUAL DINNERS IN SCOTLAND AND IRELAND.

Glasgow Western M.C.C. and Dublin M.C.C. Successful Events.

THE annual dinner of the Western M.C.C. (Glasgow), held in the "Grosvenor" on Feb. 12th, was indeed a very enjoyable function. About 150 members and friends were present, and did justice to a very excellent repast. Among the guests were several well-known names in the motor cycling world, notably Mr. Geo. Stevens of A.J.S. fame.

In proposing the health of "The Western M.C.C.," Mr. David Black paid tribute to the excellent work the club was doing in fostering the pastime in the West, and as a member of the trade was greatly in favour of competitions, and emphatic concerning the benefits which these brought to manufacturers.

In reply, Mr. W. H. Simpson, the chairman and popular president, gave a short *résumé* of the life of the Western M.C.C. As instancing the enthusiasm of its members, he stated that the membership at the end of 1919 was fifty, whereas to-day there were 200 names on the roll. The club had held eleven competitions during the past season, and these had been very well supported indeed.

During the course of the evening musical selections were ably rendered by several well-known artists, who greatly assisted in making the evening a most enjoyable one. To judge by the enthusiasm of those present, the coming season promises to be a record one from the sporting standpoint, and speed merchants in the West are assured of a very full programme, including several hill-climbs.

The Irish Affair.

Curfew regulations notwithstanding, the annual dinner and distribution of prizes of the Dublin and District Motor Cycle Club at the Dolphin Hotel on the 12th inst. was a very merry affair, and for a few hours the members of the club and their visitors to the number of nearly 100 endeavoured to forget the fact that unless the regulations regarding the circulation of motor cycles are materially relaxed the prospect of being able to carry out the usual competition programme during the coming months is a very gloomy one.

The newly elected president, Mr. S. L. Hutchinson, was in the chair, and in his usual cheerful manner he set a note for the proceedings that was sustained throughout the evening.

After dinner, the awards won during the year were distributed, over a hundred trophies, cups, and medals being handed over.

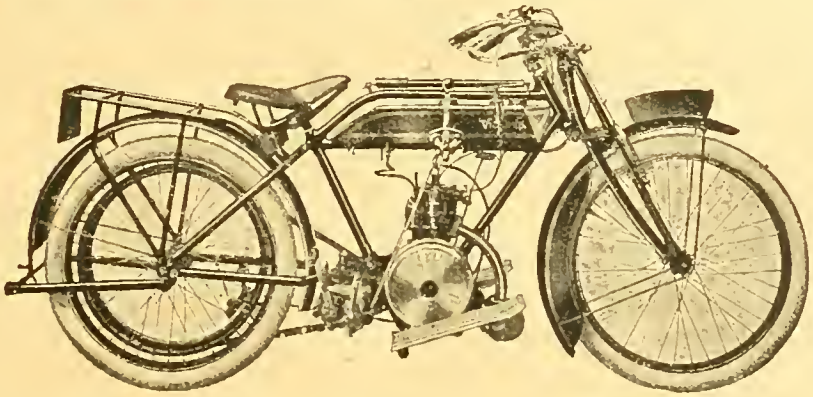
The toast of "The Club" was proposed by Mr. Cormac Walshe, the local manager of the Dunlop Co., a firm, by the way, that largely contributed to the prize list.

It was responded to by the hon. sec., Mr. W. H. Freeman, who mentioned that, despite the troubled state of affairs in Ireland, the club had carried out the full programme of events arranged at the beginning of the year and two extra events.

The toast of the health of "The President" was given by his predecessor in office, Mr. G. A. M. Curtis, and when Mr. Hutchinson had suitably responded he sprang a surprise on the gathering by producing a beautiful rose bowl for presentation to the secretary. Several members joined in the compliments paid to Mr. Freeman's work on behalf of the club, and the recipient suitably replied.

Other toasts included "The Press" and "Our Musical Friends," the latter contributing in no small degree to the pleasure of the evening.

VICTORIA LIGHTWEIGHT MOTOR CYCLE



The 2½ h.p., 2-stroke (Villiers Engine) Model Victoria is admitted on all hands to be best value. It is British from end to end, and neither American nor German competition can touch it in price.

The prices of Victoria Motor Cycles will not be reduced this season.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. *Replies to Box Number advertisements containing remittances should be sent by registered post, but in all such cases it is advisable to make use of the Deposit System.*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1 %. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited. The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

SPECIAL OFFER
OF
DOUGLAS
MOTOR CYCLES

Rebuilt as new from ex-Government machines and new parts.

Completely equipped with new accessories, including head lamp and generator, tail lamp, horn, iicence holder, two toolbags, pump, and tool kit.

Douglas 2¾ h p , 2-sp., £65

Douglas 4 h.p., 3-sp., kick-start and clutch .. £85

Douglas 4 h.p. Combination, with new body, £105

Being the largest dealers in renovated Douglas motor cycles in the trade, and having large numbers on hand for disposal, we make the above offeu for a short period, to endeavour to considerably reduce our stocks.

Each machine is rebuilt in our own workshops, stove-enamelled, replated, tanks renovated in makers' colours, fitter with new magneto, carburetter, tyres, front brake, etc., and complete with full equipment as above.

Each machine is absolutely guaranteed, and in appearance is practically indistinguishable from new.

In addition to the above, we have about 100 machines at a lower figure, each one overhauled, stove-enamelled, replated, tanks in makers' colours, good serviceable tyres, fitted with toolbag, kit, and pump. Guaranteed sound, good running machines.

Douglas 2¾ h.p. 2-sp., £55
Full equipment extra.

Carriage extra in each case.

Trade Supplied.

Full p rticulars of Deferred Payment Terms on request.

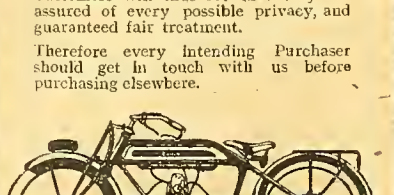
WHY WAIT MONTHS

for a motor cycle when a postcard will bring you particulars of our deferred payment system, enabling you to have one at once.

Customers wishing to purchase under this system should for many reasons send to THE SERVICE COMPANY (LONDON) LIMITED for particulars.

We have for many years specialised in EXTENDED PAYMENTS.

We conduct the business ourselves, and do not hand it over to outside Money Lenders.



Each account is under the control of this Company.

The additional charge is the minimum allowed by the Manufacturers, and a REBATE is allowed for prompt payment.

There are no harsh terms, and in the event of a customer's inability to keep up the instalments, time is generally allowed for payment, or, if the machine is returned, the full market value is allowed.

Customers will thus see that they are assured of every possible privacy, and guaranteed fair treatment.

Therefore every intending Purchaser should get in touch with us before purchasing elsewhere.

We are Contractors for all the BEST of 1921 models, and can supply A.J.S. ARIEL,* ALLON,* BLACKBURNE, BROUGH, B.S.A., ENFIELD, HUMBER, LEVIS, MATCHLESS,* NEW IMPERIAL,* NORTON, O.K.,* P. & M., RUDGE,* ROYAL RUBY,* SCOTT, SUNBEAM,* TRIUMPH, VELOCETTE,* ZENITH, etc.

*All Purchasers of 1921 models of these machines delivered between this date and June 1st next, will be refunded the difference if any reduction should be made during this period, provided the claim is submitted before June 30th next.

SECONDHAND MOTOR CYCLES.

We have a fine stock of the above, every machine overhauled and guaranteed in good order. Please send for lists or let us know the type of machine you are requiring and the approximate figure you wish to pay.

Our Extended Payment system applies to secondhand machines as well as new models.

THE ONLY RUBBER SOLE THAT CAN BE SUCCESSFULLY FITTED BY ANY AMATEUR.

DAVIS

Ustikon

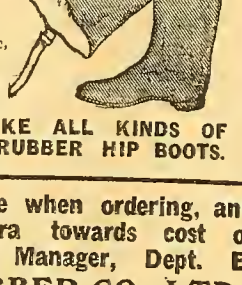
PATENT

SOLES & HEELS

USTIKON SOLES.

GENTS' SIZES .. 3/9

LADIES' SIZES .. 2/9



Complete with Sol-fix and directions.

USTIKON HEELS	1⅛"—1⅜"	10d.
	1½"—1⅞"	1/-
	2"—2⅜"	1/6
	2½"—2⅞"	1/9
	3" —	2/-

Ustikon Soles and Heels contain quality sufficient to obtain 6 to 12 month's wear. No heat or apparatus, neither nails nor screws are required to fit them to boots which become absolutely waterproof. Ustikon Soles and Heels are stuck on. The method is simplicity itself. Motor cyclists everywhere are constant users, and moreover you don't have to be a craftsman to fix Ustikon Soles and Heels, but you will be surprised to see how "crafty" you will become as soon as you have fitted a pair to your boots. If you can repair a puncture you can repair your own boots.

RUBBER HIP BOOTS.

Made by North British Rubber Co. Ltd. Dominion Rubber Co., Ltd., etc.

PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

Don't Scrap an old Engine,

but give it a

NEW LEASE OF LIFE

by fitting the

World-famed Philipson Pulley.

Entirely Free from troublesome and weighty complications—only two working parts — no levers, rods, wheels, etc., to worry about. Simply takes the place of the ordinary pulley. One nut secures the complete gear to the engine. Can be fitted without any alterations to most direct belt-driven engines in a few minutes.

For hill-climbing it is unsurpassed. Makes mountaineering easy.

IMMEDIATE DELIVERY

"VOLEX" DRY BATTERY
Motor Cycle and Sidecar LIGHTING OUTFITS

British Made.

THESE SETS have been sold in immense quantities during recent years and have achieved an unparalleled success for this service. In consequence of their dependency over Accumulator and Dynamo Outfits the demand is constantly increasing.

Dynamo Lighting Sets with Accumulators require careful attention, and owing to complications have a tendency to go out of order. Accumulators, if not regularly charged, sulphate and become useless.

The "Volex" Dry Batteries require no attention, and with ordinary care will last from 14 to 18 months without renewal, and new Batteries can be fitted in a few moments at but little cost.

THE "SUPERBA DE LUXE"
Motor Cycle and Sidecar LIGHTING OUTFIT (as illustrated)

SPECIFICATION—6 volt "Volex" Dry Batteries in Metal Container which lies conveniently to the bottom of the Sidecar; Switchboard, "Superba de Luxe"; Headlamp (7in. front); Ball Pattern Side and Tail Lamps; Conducting Cord; Metal Filament Bulbs.

No. MC/450 .. .. .. **Price £9 9 0**

Supplied also with the "Superba" Headlamp (5½in. front).

No. MC/42 .. .. .. **Price £8 8 0**

THE "SUPERBA"
Motor Cycle Head and Rear LIGHTING OUTFIT,

comprising "Superba" (5½in. front) Motor Cycle Headlamp, "Jewel" Illuminated Rear Lamp, Set of Bulbs, Conducting Wires, Switch, and "Volex" 6-volt "Aero" Dry Battery in Strong Leather Satchel Container.

No. M10/10 .. .. .. **Price £5 10 0**

Motor Cycle Head Set as above without Rearlight.

No. M10/7. .. .. .. **Price £4 15 0**

"VOLEX" DRY BATTERIES

British made.

The most powerful Dry Batteries on the market. Unsurpassed for Ignition, Lighting Operating Electric Horns, etc.

Sidecar Taxis.

IN the House of Commons on February 16th, Viscount Curzon questioned the Home Secretary as to whether the licensing of sidecar taxi-cabs for the Metropolitan police area would be considered. The reply was to the effect that such a course was considered undesirable, and that "I know that there are three in Birmingham, three in Nottingham, I think two in Brighton and another south coast place, and I am told that they are not very popular." Considering the facts of the case, this reply is so extraordinary as to merit remark. How can a vehicle prove its popularity or otherwise if its very existence is nipped in the bud, as the Home Secretary's action clearly indicates? The statement, too, that "there are not many taxi-sidecars" is almost amusing in view of the refusal to permit such vehicles to ply for hire. Indeed, they are too new to have had a chance to prove their popularity. In those progressive towns and cities which have already granted licences, the sidecar taxi has already made good, and its number is already increasing.

The sidecar taxi is handy in traffic and economical to run, yet even in these days when economy is, at any rate, a political catchword, we find certain authorities barring the way to an advance in that direction. What is the real reason for this ultra conservative action? Are the authorities still imbued with the out-of-date notion that the modern high-class sidecar is unsafe and unreliable, or is it considered that the interests of taxi-cab owners are at stake? The whole question is important, and unless this discouraging attitude is dropped, we shall once again have the chagrin of seeing British enterprise developed in Continental countries at the expense of British industries. Paris and Naples have not been slow to take advantage of the latest form of economical public transport, and other Continental cities have the question in hand, while the British Government sets an example by publicly discouraging a distinct advance in economcial transport for the public.

Revive the Benzole Industry!

QUITE recently a Government sub-committee which enquired into the price of motor fuel, after showing how dependent this country was upon the petroleum supply of the U.S.A., pleaded that the "urgent necessity for action" to meet the present need for an unbounded supply of liquid fuel was "evident and vital."

In view of the fact that there appears to be little hope of an amelioration of the situation as far as America is concerned, possible alternatives may be reviewed. It is known that benzole could be obtained as a by-product from the gas making companies to the extent of thirty-five million gallons annually, as against the present production of under two million gallons, and that it could be sold at a price considerably lower than the existing price of petrol. To prevent the monopoly of benzole by the present petrol distributing interests, a compulsory maximum price should be enforced to prevent the cornering of supplies by a trust which might embark on a policy of ruinous underselling in order to make production an unprofitable industry.

In the present state of affairs it appears obvious that the benzole industry is the key to the problem, and if the above suggestion was adopted by the Government, in conjunction with a law making it obligatory for the gas companies to scrub their product for benzole, an all-round drop in fuel prices would result, especially when the investigations of the committee show that there was no possible justification for the last rise of 7d. per gallon.

That the benzole question is the crux of the whole position cannot be in doubt, when we are told that "it is highly improbable that Great Britain will ever produce" a sufficient quantity of crude petroleum to meet our requirements, that shale oil still remains "a fruitful field for development," and that, with regard to power alcohol, "no immediate relief can be expected."

An Index to the advertisements in this issue will be found on the page facing the back cover.

Occasional Comments by "Ixion"

A Poser.

A DEVON rider submits the following harrowing experience, sustained with a 2¾ h.p. Excelsior two-stroke. The machine ran well until half a mile after replenishing the tank at a local garage, when the engine began to splutter, and in the course of the next mile stopped altogether and refused to re-start. The usual tests proved abortive, and the machine was left at a cottage. Next day a man went for it, and after forty-five minutes discovered the trouble. The plug was sparking perfectly, the timing was correct, the magneto O.K., the controls were acting properly, the fuel was passing the jet satisfactorily, and the engine compression was excellent. What was the matter? I will give the solution next week.

Country House Lighting.

OUR query department often receives evidence that the ownership of a motor cycle renders readers resident in the country rather dissatisfied with paraffin lamps. Many of these readers cannot afford to install dynamos, or petrol gas, or acetylene plants. For the benefit of such I may perhaps for once wander from our chief topic, and recommend two lamps which I use in my country house. One is the Dargue acetylene lamp with self-contained generator (57, Grey Street, Newcastle-on-Tyne). It gives a splendid light and is cleaner and less troublesome than paraffin. Properly managed, it is also economical, for the glass chimneys of modern paraffin lamps are not as good as the old Hun stuff (more's the pity); carbide is quite cheap when bought by the cwt., but some discretion is needed in charging each lamp according to the varying length of the evenings at each season of the year. A far finer lamp is the Coleman Quick-Lite (61, Lower Mosley Street, Manchester), which burns upwards of twenty-one hours on a filling, and gives up to 300 c.p.

Such lamps provide an attractive half-way house between the cottager's paraffin lamp and the rich man's £300 "plant."

A Dog Nuisance.

TO judge by current correspondence some of our readers are ignorant of the vital fact in canine psychology. The dog has a very sensitive nose and is a more adept dodger than any international threequarter back. In other words, it only gets "wind up" when its proboscis is in danger (this is why it never makes a frontal attack on a stationary cat, so that the pussy which can maintain an absolutely immobile bluff is perfectly safe from doggy). Moreover, owing to doggy's dodging powers, he does not fear anything dodgable. Remove your toe from the footrest and wave it at him—he merely grins; the speed of your toes does not approach piston speed, and he can elude it with ease; you know you have never yet landed a kick home from the saddle except on a very young and green puppy; and even then not more than once on the same pup. On the other hand, there are things which doggy cannot dodge. He would fear Mailey, the Australian googly bowler, as a Puritan feared the devil.

Now, gentle reader, you are not Mailey. But the dog doesn't know that. You might be Mailey, camouflaged in a Brooklands helmet. So pretend to throw or bowl at him, and he will pull up dead in his tracks with his non-skid paws biting the road hard. As he blenches, you slip past. He recalls the last occasion when he got a stone plumb on the quivery part of his proboscis. He gives a final yap of defiance and despair, and awaits some motor cyclist less sophisticated than yourself.

No dog has fetched me off since I mastered these elementary facts. The feelings of dogs towards me resemble those of the Jaeger battalion on being asked to storm Verdun after twelve previous attempts. Yet I am not a dog hater, neither am I at present a dog owner.

SPRING IS COMING!

The

Annual Spring Number of

THE MOTOR CYCLE

will be published on MARCH 17th, and, in addition to many special features of interest to all motor cyclists, will contain a complete

Illustrated Buyers' Guide

giving the fullest particulars and current prices of the different makes of motor cycles on the British market.

The Cloven Hoof.

THE notion that the rolls-roycey gentlemen who control the R.A.C. could ever take an honest interest in such midgets as the G.N. and the Morgan was so absurd on the face of it that I could not understand why some sections of opinion grudged the A.C.U. any power over four-wheeled cycle cars. It is now freely stated that the A.C.U. is under the thumb of the motor cycle trade, and that this industry desires to squelch the cycle car so that the side car can have an open field. I cannot credit this innuendo. The A.C.U. has exhibited considerable independence of late, and I should estimate that it is less amenable to trade pressure than ever it was, powerfully as the trade is organised to-day. The "trade" is a very comprehensive term, and includes plenty of people who are always on the look-out for new employment

Occasional Comments.—

for plant and capital. There are, of course, firms who do not exactly hunger for anti-sidecar competition; but they are tolerably well balanced by other concerns who will never sacrifice a good selling line. For example, the 8 h.p. Rover and the G.N. have both made good without any real help from the leading motoring organisations, for they have won over a class of driver who values personal comfort and protection from the elements—in short, the class which is left rather cold by the average performances of the stunt sidecarist. Moreover, these timid gentry quite ignore the amateur motor cyclist, who in the ultimate issue is the master of both the trade and the A.C.U. The general mass of riders have no intention of allowing fear or favour to squelch the cycle car. If the A.C.U. confounds the cycle car with the chamois, as it may do, it will soon be forced to revise its policy; but, personally, I have considerable confidence in the *personnel* which at present governs the A.C.U., and I do not think it will need much gingering from anybody.

Too Much Zeal.

WAS it a French archbishop who concluded his discourse with the moral: "Above all, my brethren, *point de zèle!*" The maxim is wiser than it looks. One of our most ardent readers has long since grasped the fact that the vim and vigour of a two-stroke engine are largely dependent on the tightness of the compression. He has cautiously increased the girth of his piston rings until his 'bus is m.p.h. faster than the standard. The other day he was indulging in what he calls "a mild flutter" (knowing him as I do, I imagine his speedometer had passed the 60 mark, and was working back round towards the 10 mark again) when the engine seized, and the machine became stationary within ten yards. Being some lad, he arrested himself in a vertical position. A mile further on it repeated the performance, and deposited him roughly on mother earth. The point of the prelate's peroration is now obvious—perhaps his grace was a motor cyclist.

Cycle Car Engines.

IT was with unusual interest that I perused Mr. F. E. Schofield's letter on the merits of the sidecar as compared with cycle cars. The coming struggle between these two types of passenger mount is bound to be frightfully interesting. The average Briton always feels a certain sympathy with the under dog, and for that reason some of us are keen on the cycle car's chances, though it has a long furrow to hoe before it overhauls the best sidecars.

Technically, the sidecar has all the worst of the argument. Practically, it is further crabbed by the exposure of its driver. Actually, the cycle car suffers from two very serious handicaps. The first is that it is in its infancy, whilst the sidecar has undergone intensive culture for nearly twenty years. So we get a deal of "potty" trouble with a cycle car; one friend of mine recently shed his oil tank, which was secured by a pair of woodscrews to a piece of that curious timber unknown to botanists and foresters, but freely employed by coachbuilders of the cheap and nasty breed. This sort of thing would never be tolerated in the sidecar world.

The cycle car's second crab is usually vibration, and vibration accentuated by a noise, which seems to synchronise with the vibration, and to make the vibration audible. Much of the vibration is road vibration, for very few cycle cars have been as well sprung as a first-class sidecar outfit. But where road vibration is adequately suppressed, engine vibration still lingers. This is an unpardonable folly. The high-powered sidecar is practically limited to the V twin, which is not a very steady engine, and never has too smooth an exhaust. The cycle car can readily house any type of engine—miniature four-cylinder, big flat twin, multi-cylinder two-stroke, and the like. But in practice the cycle car seldom has a quiet or well-balanced engine; and the owner is usually encouraged by faulty design of the starting facilities to run his engine in neutral oftener and longer than the average sidecar owner need.

SPRING-LIKE WEATHER AND THE LURE OF THE ROAD.

Every week end at any motor cyclists' rendezvous, spring shows of new models are being held. It is the interest taken by motor cyclists in one another's mounts that is one of the foundation stones of the great brotherhood of the road.

Winter in the Highlands.

BY H. MORTIMER BATTEN.

The Economical 3½ h.p. Sidecar Outfit for General Utility Work in the North.

THE 3½ h.p. sidecar outfit is unquestionably the poor man's vehicle—not only because the initial outlay is comparatively small, but because a good machine of this type is absurdly cheap to run, its oil, petrol and tyre consumption being very low. My petrol consumption riding always with sidecar attached over Highland hills, Highland pot-holes, and through every abomination of Highland weather, has, this winter, worked out at 74 m.p.g. Oil consumption I do not know. The machine is mechanically lubricated, and the oiling looks after itself. I fill the tank on special occasons, such as cook's birthday, and proceed thereafter to forget all about it. The engine is always perfectly oiled—just a blue puff of smoke when one accelerates violently. The hand pump ceased to function for want of some trivial adjustment early last autumn, and I have never troubled to put it right. The tyres were new just before the English Six Days—heavy Palmers, by which I swear. At the end of the Six Days the rear ribs were not unduly prominent, though the front wheel ribs were hardly rounded. I changed the tyres over, and both are still going strong—perfectly evenly worn, with not a suggestion of a cut. They must have seen well over 3,000 miles, including the English Six Days, which in itself is supposed to represent at least the life of a tyre. Unhappily, I have never aspired to making out my running costs, but from the foregoing it will be seen they are very low.

Two or Three Speeds.

My experiences with this machine will, I hope, be of some little value to those numerous readers who desire as cheap a mount as they feel to be consistent with their demands. The P. and M., it must be borne in mind, is provided only with a two-speed gear, which, by the way, is of practically infallible design. A three-speed gear would, undoubtedly, add to the speed of the outfit, but so far as climbing, etc., goes, I have not really felt the need for it.

Unquestionably, the chief bugbears for the low-powered sidecar outfit are head winds and heavy roads. The least headwind brings down one's average speed at once, and I remember a few years ago it was no uncommon thing for the driver of a P. and M. and sidecar to have to travel for miles on low gear. Those days, however, seem to be past, for the present-day engine is very much more powerful than its predecessors. Goodness knows we get enough wind in Scotland, and owing to the wildness of the country, and the great distances between villages, one is compelled to travel very fully equipped. My daily load com-

Winter in the Highlands.—

prises the following extras—two head lamps, two generators, wide leg shields, Bluemel windscreen, spare heavy cover, two inner tubes, complete set of chains, handle-bar muffs, valves, and, of course, the usual array of minor spares and tools. In the case of an 8 h.p. outfit a few pounds extra in the way of accessories make no difference, but with a 3½ h.p. every pound tells. It is a fact, indeed, that there is a hill near my home which I can just climb with passenger, but no extras. If I have my lamps on and a gun in the sidecar I have to push on each of the hairpins during the ascent. The total weight of the outfit is 4 cwt. 30 lb.

It will be seen that the machine is ridden very much in touring trim, but certainly I have never yet had to progress on low gear on the level owing to head wind, heavy roads, snow, or anything else I can think of. One of my regular journeys takes me through Glenogle, a rugged and romantic spot which will be known to many of my readers, and ascending the pass from Lochearnhead I can romp up the four-mile gradient provided there is no wind, never falling below 24 m.p.h., and at times picking up to over 30 m.p.h. For those who do not know the climb I may add that the family Ford cannot scramble to the summit on top gear unless there is a hurricane helping from the rear—indeed, during normal conditions there is less gear changing with the P. and M. than with the Ford carrying two people and their luggage, and as cars go the Ford is certainly "a top-gear" vehicle.

So much for the ordinary conditions of the year, but those who know the Highlands in all their summer beauty, when the lochs are radiant with silver birch and the deepest blue of unrippled waters, have really no conception of the conditions of winter in these lands. Referring again to Glenogle—there is a point at the foot of the pass about two miles above the loch at which the winds, blowing down all the glens and corries of the vast highlands above, meet and concentrate their energies on one particular part of the high road. This point, even on a comparatively still night, is like the core of a typhoon; on a windy night the conflicting forces of the air strive to pound one into a pulp, then to suck the pulp heavenwards. Regularly I have to make the journey by night, and I always anticipate the approach of this fifty yards of road with mingled dread and wonder.

Highland Weather.

I shall never forget the first time I struck it. The rain was coming down solid. I had travelled from London during the day, leaving Euston at breakfast time and arriving at Callander about 10 p.m. There I had previously left my machine so as to get home in the one day. The hurricane was behind me for the most part, and simply whirled me homewards in a stationary atmosphere. Suddenly I struck the danger point. It was like running into a haystack. I was bowling along at about 32 m.p.h. when, in about five yards, I was pulled up short with pinking engine. I grabbed the change speed lever and jammed in low gear, but immediately came to a stop with a series of savage jerks. The wind was so terrific that, using the kick starter, I simply could not tell when my engine was firing; but somehow, dazed and dripping, I reached navigable waters again, where the comparative quietude was almost frightening.

Near the summit of the long ascent of Glenogle.

Killin, on the Dochart River—a typical Highland village.

Living in this northerly land, it would be utterly suicidal for a rider to employ any machine but one in which he had the utmost faith. Take my own position. Very often train services compel my leaving some point for home late in the night. My journey lies over bleak mountain tops, and one hardly dares to anticipate what the failure of one's machine might mean on a winter's night. Many a roadfarer perishes on these roads during winter, and though I am no more afraid than anyone else, I realise that to be stranded in the midst of some of these "no-man's-lands" might be fatal. The cold is so intense that, coupled with fatigue, a single mis-step in the darkness might lead to one becoming lost, in which case it is almost impossible to regain one's bearings. I have participated in too many hunts for lost people to underestimate the danger. Only last winter I was a member of a search party which, for three days, searched the hills for a farm girl who, during a fine though frosty night, had wandered off the road into the interminable heather. Blizzards had followed, and we knew that we were looking for the dead. We killed numbers of white Alpine hares with our sticks, and the man on my right knocked a roe deer off its feet by throwing his stick into its legs as it rose from the heather, but we did not find the girl. It was early spring when finally she was found by a shepherd with the melting of the drifts—seated quite naturally with her face between her hands.

Personal risks are not of much consequence; one can usually get out somehow, but the P. and M. sidecar outfit has been in daily commission by way of giving my wife and year old infant a fresh air spin. The greatest exhilaration and the grandest scenery are afforded by the roads over the hills, and one can imagine that such jaunts could not be regarded with much pleasurable anticipation unless one were very sure of the machine. Most of the roads we traverse are utterly deserted, and a breakdown with a small infant would really be most serious. But, as a matter of fact, no thought of breakdown ever mars the pleasure of these outings, and I have not touched my machine, except for lubrication and one chain adjustment, since the English Six Days.

The Question of Cost.

Again, why should we use a car, which costs at least six times as much to run as the sidecar, when the latter fulfils all our requirements? I, personally, obtain far more pleasure from driving the sidecar than I do from driving a car, and my passengers are more comfortable and warmer in the sidecar—chiefly because there are no draughts.

In justice to the maker of the Bluemel windscreen, however, I must say that this fitting has alone made our winter jaunts possible. None of the many windscreens that I have tried, excepting the Bluemel, were really fit to place a very young infant behind. Most of them created back draughts or down draughts, or were objectionable in some other way, whereas the Bluemel seems to fill the bill in every respect. It has given unqualified satisfaction, and though not so adjustable as many on the market it at least fulfils its purpose when in use.

(To be continued.)

Road Tests of New Models

THE 350 c.c ARMIS SIDECAR.

WHETHER it is the new taxation scale which automatically divides sidecar outfits into two classes (*i.e.*, those taxed £4 and those which escape with £2 10s.), or whether it is the present tightness of money, there is no gainsaying that the two-stroke lightweight sidecar outfit has of late come rapidly to the fore. The improvements made in two-stroke engines during the past few years make possible the attachment of a light sidecar to motor cycles which, a short time ago, were regarded only as indifferent solo mounts. Of course, one cannot expect to maintain the same average as with a more powerful outfit, but for any ordinary main road running such a machine as the 350 c.c. Precision-engined Armis will meet the requirements of a large number of people who are content with a moderate speed

We recently tested one of these little outfits, and found its maximum speed to be in the neighbourhood of 35 m.p.h. True, its acceleration was not of the big twin order, but the way in which it "slogged" along at a steady 20 to 22 m.p.h. was really remarkable.

Although the Armis pleased us before parting, it sadly disappointed us initially. Within the first ten miles it developed all sorts of symptoms of internal derangement — particularly a periodical falling off of power accompanied by choking and recurrent backfires.

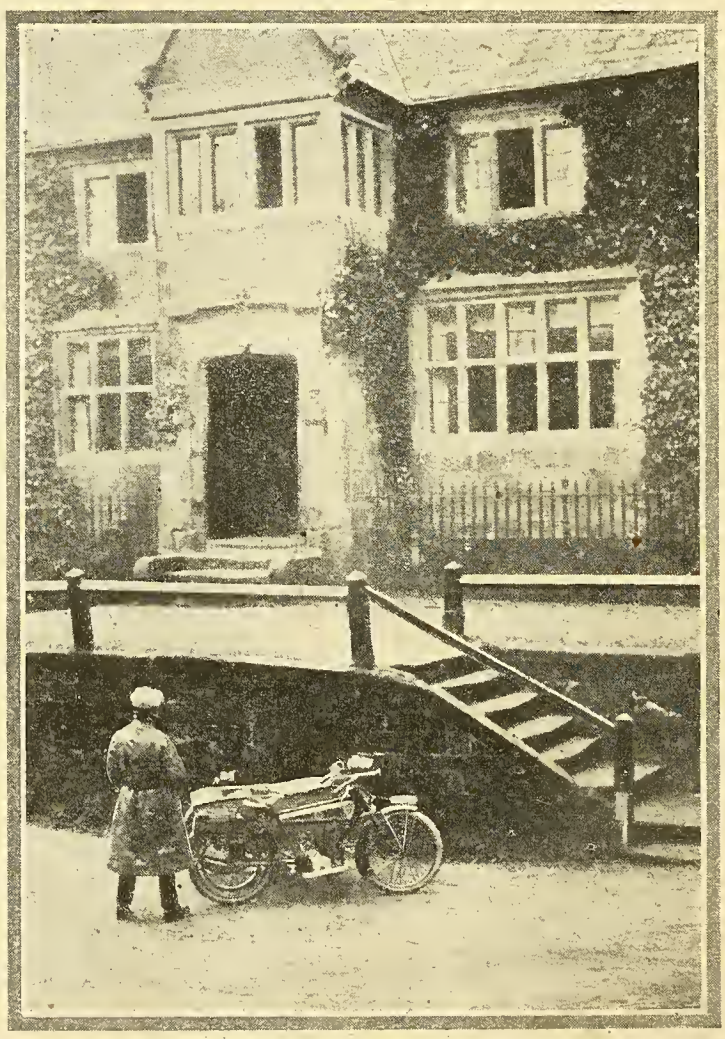
We might well have turned suspicious glances right away on the state of the lubricating arrangements were it not that we had been given to understand that there was sufficient oil in the sump to last another hundred miles; and

A high power-weight ratio is a great advantage when one is in a hurry on country lanes—unexpected corners and gradients, naturally, do not necessitate so many changes down as on a heavier mount with the same engine capacity.

Road Tests of New Models.—

we knew that, given these conditions, there is practically nothing in the Precision system of oiling that could go wrong.

Therefore, much mystified, we, perforce, adjusted or checked everything else that might or might not have any bearing on the trouble. Ignition and carburation, however, were apparently quite in order; and, as a last resort, it was decided to try a much greater opening of the oil valve than should ever have been necessary. This improved things at once, and, incidentally, turned our attention to where it ought to have been at first, viz., the crank-case oil-level window. There was practically no oil in the sump!



This rectified—well, exit trouble *tout de suite*.

It is often said that confession is good for the soul; does it lessen the efficacy of confession to plead extenuating circumstances? In this case there were two: (1) the symptoms were not very indicative of under-lubrication, and (2) the oil setting was (we understood) as fixed by the makers.

Power Maintenance.

At any time a successful adjustment is inclined to prejudice one in favour of the ensuing behaviour of the machine upon which it is effected. Perhaps this happened in the case of the Armis; but there can be no doubt but that it is a remarkably good puller and, what is even more important, apparently able to maintain its power under load for long periods, just on the illegal side of the legal limit.

Regarding hill-climbing it easily took a passenger up the majority of the main road hills that we encountered, on top gear: and, on the only two occasions that it was necessary to change down, the lower ratio appeared to be considerably lower than necessary. A three-speed gear would, no doubt, be a great improvement, both for the high second ratio and an emergency low. Although, during our test, we never found any call for the latter, we can readily imagine conditions in the normal life of such an outfit where the third ratio would prove more than helpful.

The small size of the Armis sidecarette is shown here while its driver attempts to decipher the tablet over an old schoolhouse door.

Fuel consumption was heavy—on (admittedly wasteful) short runs we averaged a bare 50 m.p.g.—but, again, our tinkering at the Cox aimed more at power than at economy. We should imagine that 70-80 m.p.g. would be a much fairer estimate of the machine's capabilities when normally adjusted. It must be remembered, too, that tyre wear on such an outfit must be extraordinarily light, and consequently the running costs per passenger should pan out as low as, if not lower than, those on any other self-propelled vehicle on the road.

Criticism.

Several points must be criticised, and it is noteworthy that all these faults (if we may call them so) might be eliminated at little or no increase in selling cost. The brakes are quite inadequate for sidecar work: in this respect the Armis sins in good company, but it sins nevertheless. Secondly, the sidecar *body* (as distinct from the sidecar) could be more comfortable; the addition of six inches more of back-rest should literally transform it. Lastly, the final drive (a $\frac{3}{4}$in. belt) is not quite capable of meeting the heavy demands of that most efficient little engine. Modern belts are so reliable that it is an exception nowadays to find one that pulls through. Ours did, twice.

At a cursory glance, or on a more critical examination, the Armis outfit is quite taking: beyond the points already mentioned the design is both clean and sound, and the workmanship and detail finish deserve nothing but praise. Further, it is most controllable and docile to handle. One word of warning here may not be out of place—a warning that also applies to the majority of sidecarettes.

Great care must be exercised in driving with an empty sidecar. It is as fatal to take sharp left-hand bends unladen at speeds over 6 m.p.h. as it would be to race at a Brooklands with the banking inside—fatal that is, to the maintenance of an even keel, if not to bodily safety. With a cargo, of course, it is only appreciably more "tricky" than the average 4 h.p. outfit.

The Protection and Lubrication of Chains.

Some Opinions based on a Long Experience of Chain-driven Machines.

THAT the chains of motor cycles give the best service by far when enclosed in an oil bath is a fact that can hardly admit of two opinions. When totally enclosed chains are properly enclosed so that oil cannot escape, and dust or mud cannot enter, the chain will always be running under ideal conditions, and will give extraordinarily good service; but it should be added at once that completely enclosing cases are worse than useless if they do not adequately fulfil the object with which they were designed.

A complete cover for the front chain, or chains, is fairly simple of achievement. It can fit snugly around the engine boss and up against the gear box, and nothing need project from it in front. For this purpose I know of nothing better than a cast aluminium case split horizontally into a top and bottom half, and having a machined flange where the two halves fit together. Sheet steel cases can also be made quite effective, but they are rather more likely to rattle.

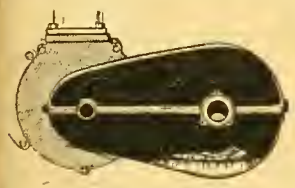


Fig. 1.—Oil bath for the front chain—a very simple matter.

The rear chain cover is, however, a much more difficult piece of design. A revolving part must project from it at the back, viz., the rear hub, and the axle in front, while in most cases the chain stay must pass obliquely through it, for this is invariably outside the rear sprocket and generally inside that in front. It will be seen then that the fitting of really effective oil-proof cases is a more difficult problem than many people suppose.

Mud and Water Traps.

If live rear axles were used on motor cycles and the rear sprockets placed outside the frames, the problem of effectively enclosing the chain would become much more simple, but this is a form of construction that I have never yet seen applied to a motor cycle.

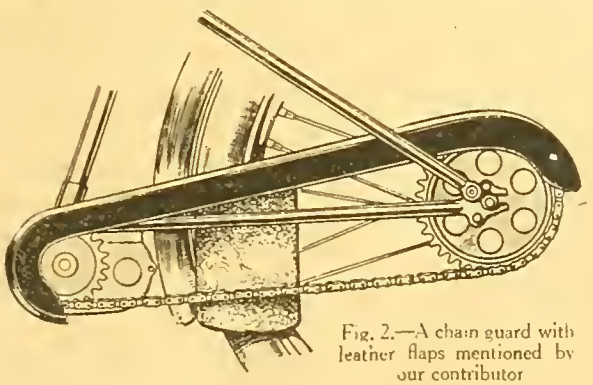
A friend of mine once had an expensive outfit equipped apparently with excellent chain protection, but when taking down his machine for its spring clean, after a winter of dirty riding, he was astonished and disgusted to find that his case contained a mixture of mud and water. Obviously naked chains would be better than this. If, therefore, the best method does not go hand in hand with the best in design and workmanship, then it is preferable to be content with less ambitious methods of protection and make use of a simple cover.

It is sometimes argued that a chain will, by virtue of its speed, throw off any mud that may fall upon it. There is something in this, but it does not cover the whole question. Most of the mud will doubtless be thrown off, but, before this happens, it may do a considerable amount of damage, and, although the chain may look fairly well at the end of a ride, by next morning it will bear very convincing evidence of the treatment it has received.

On muddy roads the tyres are continually picking up dirt and throwing it about; on some machines the rider's legs get a fair share of this, and the chain gets its quota of that picked up by the rear wheel. Side flaps, or valances, on the mudguard will keep off a certain amount of this mud, but not all, and I have found a light chain cover turned well over the top run of the chain, combined with a leather flap, as shown in fig. 2, extending below the bottom run, a real advantage. Not only does this protect the chain to a very great extent on the road, but it intercepts all the mud and water which drip from the mudguard during the night, and would otherwise cause the chain to become red with rust and caked with mud before morning.

Inspection Facilitated.

In one respect the light cover has an advantage over the complete case, it enables the chain to be inspected and the adjustment checked a little more easily; though even when we think of this small advantage we must remember many chain cases are fitted with inspection doors for this very purpose, and that adjustment is not often required when the chain runs in a well-made oil bath.



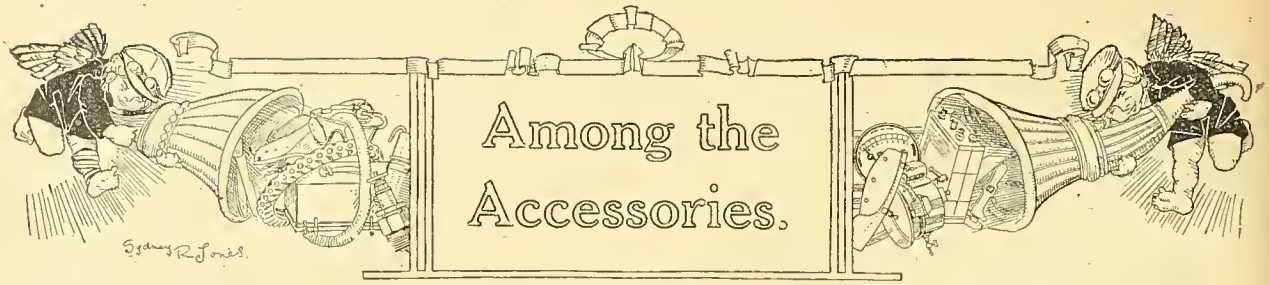


Fig. 2.—A chain guard with leather flaps mentioned by our contributor

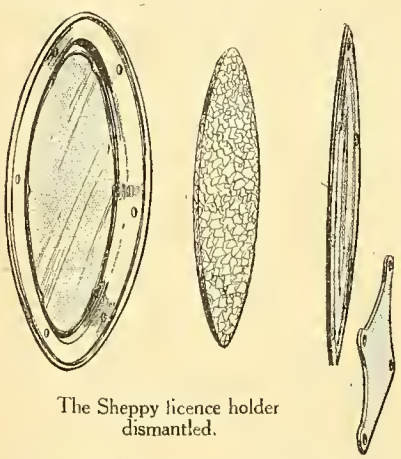
To sum up, well made complete cases with an oil bath are an easy first, full protection without oil second, and light covers a good third; naked chains and cases full of mud and water are among the "also rans."



No chain should be lubricated with oil unless it is completely enclosed in a dust-proof case, for the oil will mix with the road dirt and form a grinding paste that will speedily wear away both chain and sprockets, causing the latter to become hooked. For this reason an oil spray from the engine is bad for an exposed chain, though all right in a case. I once tried this, and never knew my sprockets to wear so quickly. Exposed chains should be lubricated with grease and graphite. Prices' Rangraphine—a mixture of graphite and Rangoon jelly—is excellent, as I can testify from experience. The chains can be soaked in this when it has been melted (not boiled—this is very important, as boiling oil is hot enough to spoil the temper of steel), or the mixture can be softened with paraffin and rubbed on with a brush. The former method is the better when time admits of the chain being removed from the machine, but the latter is not to be despised.

CHAIN DRIVE.

The Sheppy Licence Holder.

AT first glance the Sheppy licence holder does not present any startling features; but, on examining it closely, several interesting points are revealed. In the first place, the glass is of the Triplex variety permanently held in position so as to be perfectly watertight. Behind the licence itself is an accurately fitting cork back. The back plate is strong, and is secured by several small bolts and nuts, while the edge of the rim holding the glass is spun over.

The Sheppy licence holder dismantled.

Mr. Walter Sheppy, 3, Bury Court, E.C., claims that the licence holder is unbreakable, and is completely watertight. The Sheppy licence holder is handled by Messrs. Brown Bros., 15, Newman Street, Oxford Street, London, W.1.

Mercury Detachable Sparking Plugs.

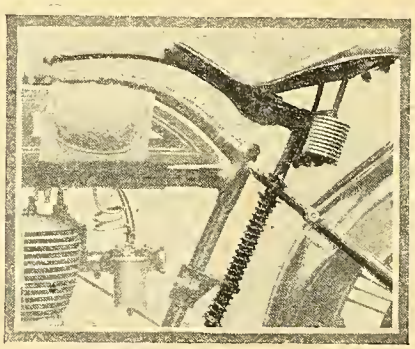
The Mercury detachable sparking plug.

THE distribution of the Mercury sparking plugs, one model of which is illustrated here, will shortly be taken over by the East London Rubber Co., 29-33, Great Eastern Street, London, E.C.2.

Eight models are made, all of which are detachable, and six of them are provided with ceramic insulators.

The type illustrated is specially adapted for use on single-cylinder motor cycle engines, whilst there is also a special two-stroke pattern.

Aluminium Handle-bar Grips.



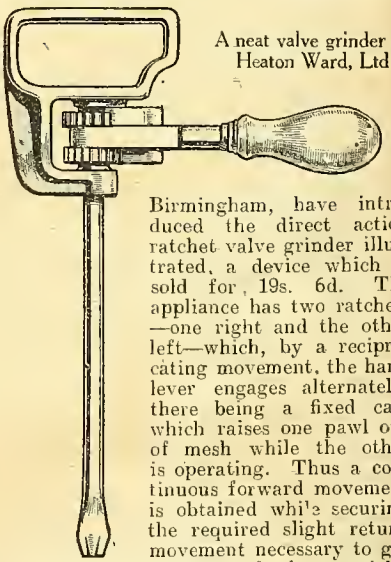
THERE is no doubt that aluminium accessories are "fashionable." They add considerably to the appearance of a machine, and impart a finishing touch. Messrs. Clement, Butler, and Co., 32-33, Borough High Street, London, S.E., evidently appreciate this, for they have recently introduced aluminium handle-bar grips, which are very well made and finished, and should meet with a ready demand from those who take pride in the appearance of their motor cycles. They cost 4s. per pair.

The Evabrite aluminium handle-bar grip.

Auxiliary Seat Springing.

THAT so many modern machines are fitted with spring frames or spring seat-pillars suggests that our roads are still a source of trouble to the rider who desires some degree of comfort. Rigid frames are still in the majority, however, and, therefore, auxiliary spring devices adaptable to any machine are receiving much attention.

Pivoted well forward on the top tube, the Perfect seat-pillar acts against coil load and rebound springs.



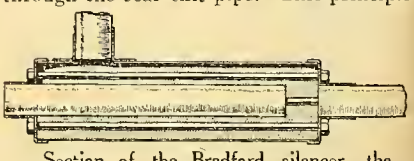
The device illustrated, which will be known as the Perfect seat-pillar, explains itself; but it should be noted that saddle height is not unduly increased by its use, and also the fact that the finish is a special process all-black.

Provisional protection has been taken out by the Perfect Seat-pillar Co., 12, Barrack Road, Newcastle-on-Tyne.

A Valve Grinding Device.

VALVE grinding is a tiresome task unless one has proper tools, and, for this reason, is often put off until it becomes absolutely necessary. In these days, when economy is the keynote of everything, it behoves every motor cyclist to keep his engine in good tune, and thereby obtain greater m.p.g. and sweeter running.

With this object in view, Messrs. Heaton Ward, Ltd., of Cleveland Street,



A neat valve grinder by Heaton Ward, Ltd

Birmingham, have introduced the direct action ratchet valve grinder illustrated, a device which is sold for 19s. 6d. The appliance has two ratchets—one right and the other left—which, by a reciprocating movement, the hand lever engages alternately, there being a fixed cam which raises one pawl out of mesh while the other is operating. Thus a continuous forward movement is obtained while securing the required slight return movement necessary to get the even distribution of the particles of emery in the valve seat.

Silencing by Induced Draught.

IN the Bradford silencer (illustrated) an air draught (induced by the motion of the machine) down a central tube running nearly the whole length of the chamber, tends to suck the gases out through the rear exit pipe. This principle

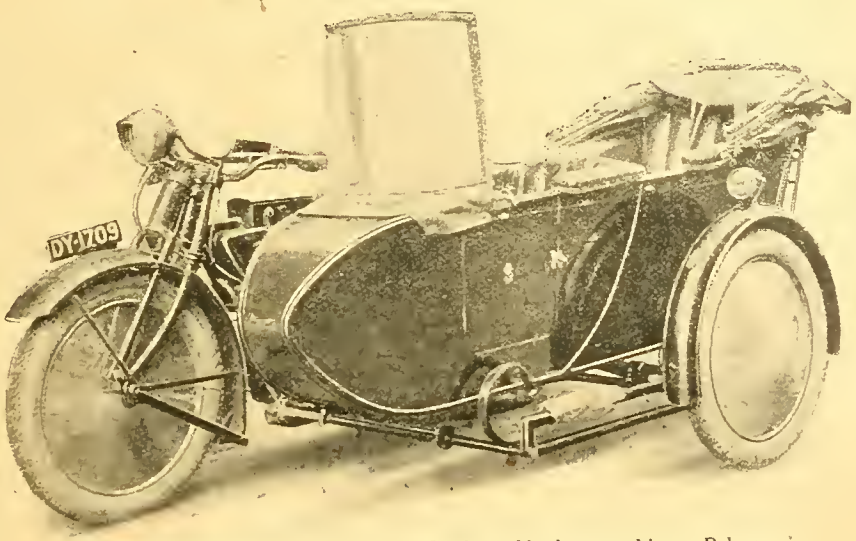
Section of the Bradford silencer, the left-hand end of which, when in position, faces the direction of travel.

has been used before to minimise back-pressure, but not in quite the same manner. A patent has been applied for by the inventor, Mr. J. T. Bradford, Colne, Lancs., who claims that the device gives most satisfactory results in practice.

Improvements in Sidecars.

Some Details of a Sporting Model, a Convertible Double-seated Body, a New Type of Springing, and a Tradesman's Carrier.

THERE is a great deal more activity in the experimental departments of manufacturers of sidecars than in the majority of factories producing the motor cycles which will propel these sidecars. Signs are not lacking that the former now fully appreciate that comfort and convenience are just as important as correct chassis design.



On this and the following page we illustrate several of the latest developments in sidecar attachments, from which it will be seen that every class of sidecar buyer and sidecar passenger is being catered for.

The term "sporting sidecar" conveys the impression of a light featherweight body mounted on a chassis of simple and light construction; in fact, a body which lends itself for speed work and is constructed with the object of minimising the total weight. Usually, this type of body is not expected to stand up to the great strain imposed upon it when used with a big twin machine. With the object of providing a body of this type, well-finished, but more substantially constructed and capable of receiving hard wear, Messrs. Capjon and Mudd, 5, Fenchurch Street, London, E.C.3, have designed the sporting body illustrated on page 257.

Concealed Body Joints.

On a recent visit to their works at Hammersmith, we were able to inspect the skeleton framework of the body, which has all screwed joints, and is made of unusually stout wood. Great care is exercised in the endeavour to produce a highly-finished surface, and the joint between the top and sides of the body is neatly concealed. We are also informed that the paint and varnish will not crack, since strip canvas is placed over the joints—a really desirable feature.

An attractive V pattern windscreen is fitted on the dash, whilst a spacious locker located behind the backrest is provided for holding, in addition to other things, a two-gallon tin of petrol.

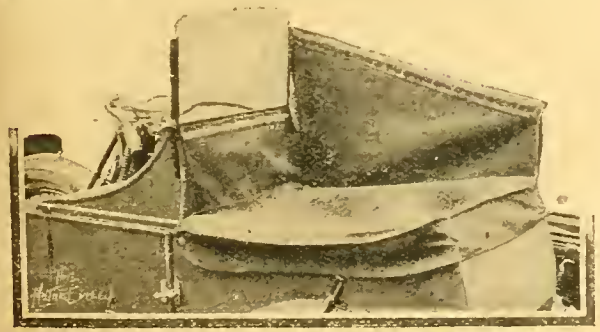
A handsome Millford double-seated sidecar fitted to a Henderson at Messrs. Robertson's Motors, Ltd., Great Portland Street.

Cantilever spring of the M.P. sidecar, showing also the method of attachment to the motor cycle.

The general appearance is boat-shape, whilst the V shaped top is distinctly attractive, and gives the body a streamline appearance.

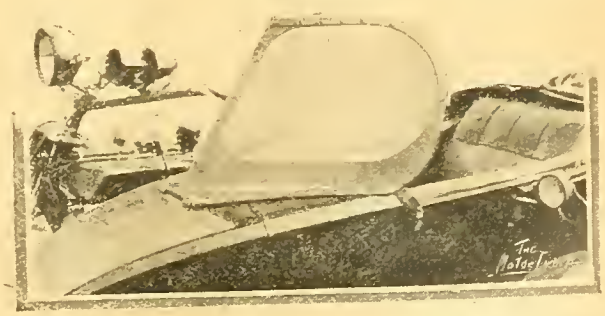
In the heading is depicted a full tandem sidecar of Millford design suitable for the larger types of motor cycles, such as the four-cylinder Henderson. With the addition of a pillion seat, this outfit provides the same accommodation as a four-seated car. It is certainly one of the most handsome full two-seaters we have seen.

A Disappearing Hood.



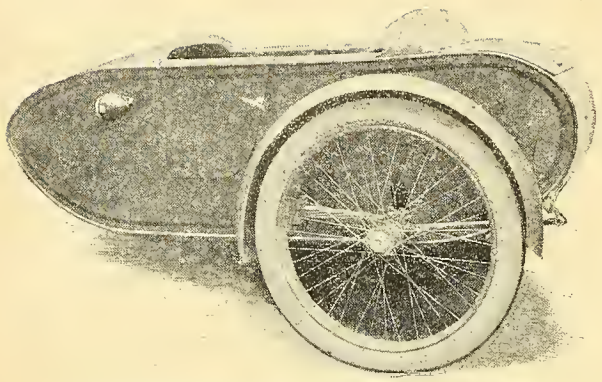
Another body provided with a disappearing hood, which excited considerable attention at the last motor cycle show, is also illustrated.

It is essentially a touring body and is exceptionally strongly constructed. It may be remembered that the hood folds up and is placed inside a deep locker at the rear of the seat. Side curtains are provided which totally enclose the passenger when desired.

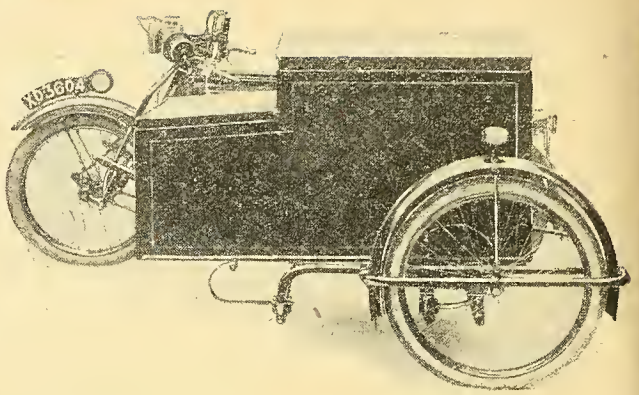


Another model is made, in which the locker in the bulbous back may be converted to a dickey seat for a child.

The chassis provides for the suspension of the body from two C springs at the rear, and inverted C springs at the front. It has a four-point attachment, and the lugs, a common cause of trouble, are of generous dimensions.



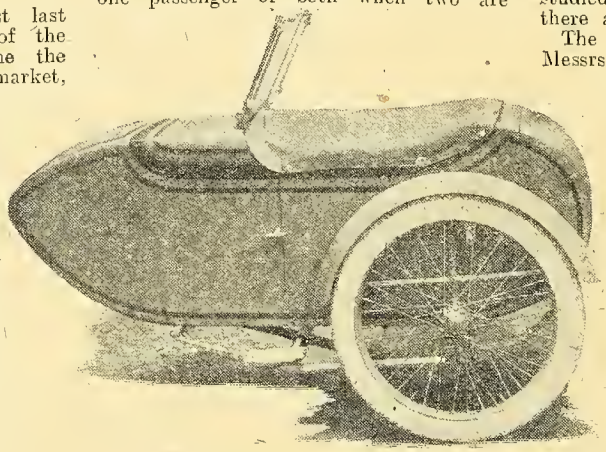
All the bodies will be finished in colours to suit individual requirements. A



A new side screen for sidecars by Messrs. Vivian Hardie and Lane.

Vee windscreen on a Motosacoche in the Paris-Nice trial.

M.P. touring sidecar. Observe the short leaf spring on the near side.



A side view of the Corona carrier box. A 4 h.p. Corona motor cycle is used

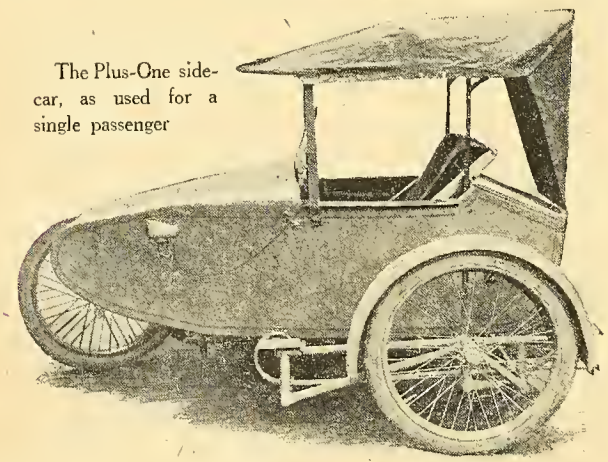
speciality, however, is made in bodies suitable for Harley-Davidson and Reading Standard motor cycles.

The Plus-One Sidecar.

In our issue for October 21st last we gave preliminary details of the Plus-One sidecar. At that time the sidecar was not actually on the market, and it was not then fitted with a hood. Further details concerning the body cannot fail to be interesting, as the design has been studied with great thought and care. Access to the front seat is obtained by swinging over the scuttle to which the screen is attached. The screen is capable of being set to any angle, and can be pushed forward out of the way if its presence is not desired. The seat is of the hammock variety with springs at the top so as to obviate the necessity for a cushion. It is adjustable, so that a position may be assumed to allow room for a passenger in the back seat. It can also be set in a comfortable reclining position or folded away altogether when it is intended to place luggage in the interior, in which case a storm apron spreads over the whole of the body. By undoing a few screws the seat framework can be removed altogether, so as to allow ample space for the carriage of goods only.

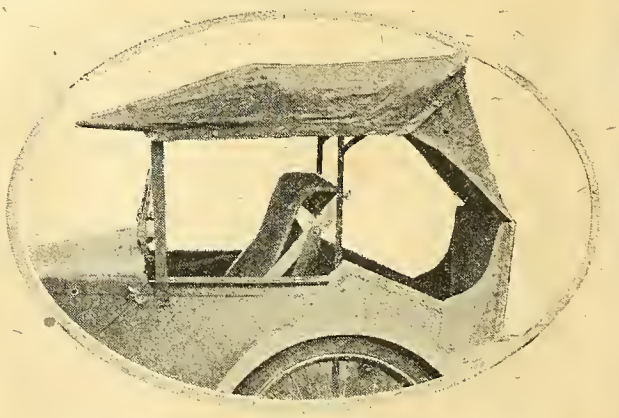
Behind the main seat is a bag in which is carried the storm apron, hood, and side curtains. The hood is detachable, and can be adjusted so that it either protects one passenger or both when two are carried. Access to the back seat is obtained by lifting up a lid which is provided with rubber strips, so that, when the extra seat is not employed, luggage may be carried on it without damage. The upholstery is in khaki, and the finish is excellent, there being walnut fillets to the top of the side panels, while the paintwork leaves nothing to be desired. The sidecar chassis has also been carefully studied. It is provided with a stand, and there are aluminium steps to each seat.

The C. and M. touring model. The seat is provided with a waterproof cape. A collapsible hood is neatly concealed in a locker at the rear.



The Plus-One sidecar is handled by Messrs. Coppen, Allan and Co., 69, Great Portland Street, London, W.1. The same firm also deals in another sidecar, named the M.P., the most interesting feature of which is the springing. The off side of the body is suspended on a long cantilever spring, while a short leaf spring supports the body on the other side. The body is hinged in front on one of the cross members of the chassis, and a five-point attachment is provided.

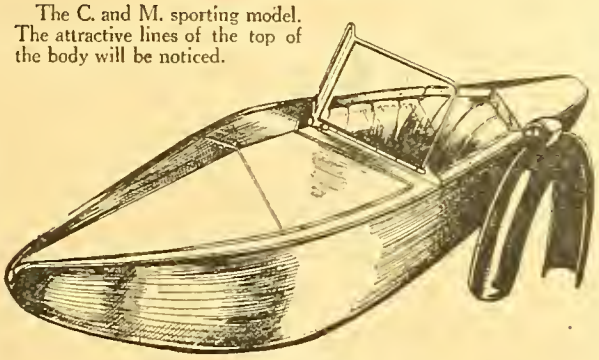
The New Tradesman's Carrier.



The manufacturers of the 4 h.p. Corona motor cycle have extended their activities, and are now producing a tradesman's carrier outfit with a 2 cwt. carrying capacity.

The carrier box is provided with a hinged top, giving access to the interior, which is divided into three compartments.

It is estimated that the cost of upkeep is less than 1¼d. per mile. It will be remembered that the Corona engine is fitted with an automatic oiling system,



The Plus-One sidecar, as used for a single passenger

How the second passenger is accommodated on the Plus-One sidecar. Observe the hammock seat

Improvements in Sidecars.— with which the machine may cover a distance of 400 miles without any replenishment of lubricant.

So as further to protect the passenger in a sidecar from side winds a new side screen has been placed on the market by Messrs. Vivian Hardie, and Lane, 24, Woodstock Street, London, W.1. It is shown fitted to a 4 h.p. Douglas sidecar outfit. It consists of an extra side shield supported at the rear by means of a metal pillar fitting into a socket at the back of the sidecar, while the top of the shield is attached to the off side upright of the windscreen. The idea has often been carried out by owners, but hitherto has not been available on the open market; an illustration appears on page 255.

The C. and M. sporting model. The attractive lines of the top of the body will be noticed.

It may be noted, both from the immediately foregoing description and from the two illustrations of V-shaped windscreens, that the elimination of side draught is at last receiving the attention it deserves. In the past many sidecars were very bad offenders in this respect; 1922 should see a complete improvement.

Reducing Second-hand Values to a Formula.

A Reader's Ingenious Attempt to Evolve a Means by which the Value of any used Machine may be Ascertained.

THE thousand odd advertisements regarding second-hand motor cycles in the miscellaneous columns of *The Motor Cycle* and our readers' close study of the schedule given each week are proof that second-hand values are a matter of great interest. Many times we have had submitted to us various schemes to arrive at the value of a used machine, but we cannot recall seeing the problem reduced to a formula such as is given below, and which has been sent to us by Mr. Frank Hall, of Stockton-on-Tees, who writes:

The following formula will give a good approximation of the value of a second-hand machine, for the present state of the market, based on 1921 prices of new machines. This formula serves the dual purpose of being a guide in the fixing of the price for a mount for sale or for verifying the price of a machine advertised for sale.

$$V = x\left(\frac{(y-1)^n}{y^n}\right)$$

V = Unknown value of second-hand machine in £.

x = Price in £ of 1921 model of similar pattern (inclusive of 1921 prices of lamps, horn, and accessories, etc.).

n = Years of age of second-hand machine.

y = A constant of 10 for January, February, March, October, November, and December.

y = A constant of 10.8 for April, May, June.

y = A constant of 10.4 for July, August, September.

The constant allows for the fluctuation throughout a year, being at the highest in April, May, and June.

(1.) To find the present value of a late 1915 motor cycle, with lamps, horn, taxation, mechanically sound, and good condition in so far that tyres are half worn only.

Let price of 1921 machine be	£120	0 0
,, ,, ,, ,, lamps and generators be ...	4	10 0
,, ,, ,, ,, horn be	2	0 0
	126	10 0
Taxation ...	3	0 0
Value of new outfit ...	£129	10 0

$$V = x\left\{\frac{(y-1)^n}{y^n}\right\}$$

$$\therefore V = 126.5\left\{\frac{9^{3\cdot5}}{10^{3\cdot5}}\right\} \quad \text{Then } V = £70.82$$

V =	£70	16 0
	3	0 0 Taxation.
	£73	16 0 = Value of second-hand machine to-day.

(2.) To find the present value of an early 1917 motor cycle and 1916 sidecar with lamps, horn (fitted in early 1920), two tyres badly worn, mechanically sound, taxation included, speedometer four months old.

This problem requires treating in staged detail.

(I.) PRICE OF 1921 OUTFIT.

Let price of 1921 machine be	£107	0 0
,, ,, ,, ,, lamps and generators be ...	5	10 0
,, ,, ,, ,, horn be	3	0 0
,, ,, ,, ,, sidecar be	42	0 0
,, ,, ,, ,, speedometer be	6	0 0
	163	10 0
Taxation ...	4	0 0
	£167	10 0

(II.) TREAT MOTOR CYCLE ONLY.

$$V = x\left(\frac{(y-1)^n}{y^n}\right)$$

$$\therefore V = 107\left(\frac{9^{3\cdot5}}{10^{3\cdot5}}\right) \quad \text{Then } V = £73.28 = £73\ 5\ 0$$

This value would have held good if the two tyres had only been half worn, so deduct half the price of two new tyres (say £6) from this value = £73 5 0 — £3 = £70 5 0.

(III.) TREAT LAMPS, HORN, AND GENERATORS (FITTED IN EARLY 1920).

$$V = x\left\{\frac{(y-1)^n}{y^n}\right\}$$

$$V = 8.5\left\{\frac{9^1}{10^1}\right\} \quad \text{Then } V = £7.65 = £7\ 13\ 0.$$

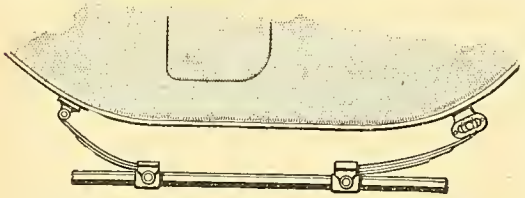
(IV.) TREAT SIDECAR (1916).

$$V = x\left\{\frac{(y-1)^n}{y^n}\right\}$$

$$\therefore V = 42\left\{\frac{9^5}{10^5}\right\} \quad \text{Then } V = £24.73 = £24\ 15\ 0.$$

(V.) TREAT SPEEDOMETER (FOUR MONTHS OLD).

$$V = x\left\{\frac{(y-1)^n}{y^n}\right\}$$

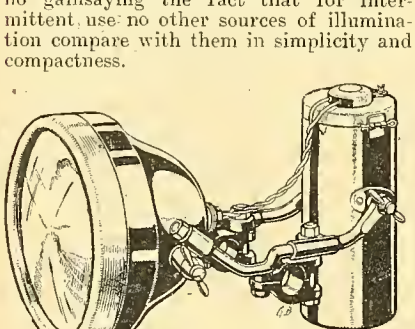


$$\therefore V = 6\left\{\frac{9^1}{10^1}\right\} \quad \text{Then } V = £5.793 = £5\ 16\ 0.$$

TOTAL VALUE OF OUTFIT.

II. ...	£70 5 0
III. ...	7 13 0
IV. ...	24 15 0
V. ...	5 16 0
Taxation ...	4 0 0
	£112 9 0

IMPROVED SIDECAR SPRINGING.



AT the last Olympia Show one of the outstanding machines was the 8 h.p. Royal Ruby sidecar outfit, which has made a reputation for the luxury of its system of springing. The sidecar chassis is insulated from the wheel through an adjustable laminated spring, and the body was carried on double-ended C springs. It was found, however, that these springs, being the same at each end, allowed the rear of the body to bump, and a new springing system is now in use. As may be seen in the illustration, the body is carried on four quarter-elliptic springs, the front extremities of the forward ones being pivoted, while the ends of those at the rear carry hardened rollers which run in guides secured beneath the load-carrying portion of the body. From actual test we found the springing to be most efficient, while the system of guides and rollers prevents any side sway.

New type of body springing on the Royal Ruby spring-chassis sidecar.

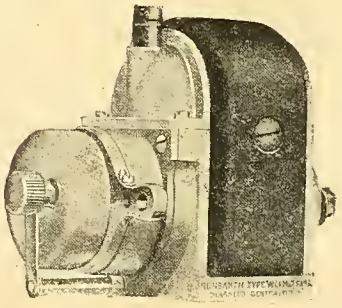
DRY BATTERY LIGHTING.

ALTHOUGH many people have the opinion that dry batteries are unsuitable for continuous use, there is no gainsaying the fact that for intermittent use no other sources of illumination compare with them in simplicity and compactness.

A self-contained lamp and dry battery set—the Rayonite.

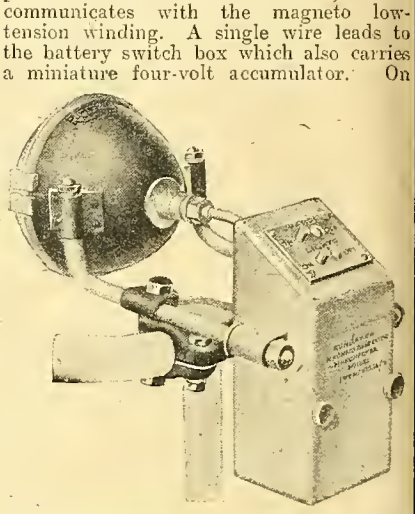
A dry battery, if properly constructed, may have remarkable powers of recuperation between its periods of service, and in the ordinary case the average rider uses a lamp so seldom, and usually for such short periods, especially during the summer months, that a good battery is entirely satisfactory. Moreover, if the cells are of the correct design, they will hold up in stock (when out of use) for long periods, three years being by no means uncommon.

In order to provide a compact and self-contained dry battery head lamp set, Messrs. Ward and Goldstone, Ltd., Frederick Road, Pendleton, Manchester, have brought out a new cylindrical four-volt battery, constructed on the Volex multi-carbon principle, which gives the qualities above mentioned. This battery is carried in a metal container, the lid of which carries the wires, switch, and battery contacts, thus making the replacement of a battery the simplest of operations. Similar in shape and size to an acetylene generator, the battery container is carried on the rearward projecting forks of the head lamp bracket; thus the whole set is self-contained, and detachable from the handle-bars on removing two nuts.



A 5in. diameter head lamp, taking a four-volt small bayonet cap bulb, is normally included in the set, which is known as the Rayonite, but a 7in. lamp may be had if required. Moderate in price, and involving no attention during its life, the set is one which should appeal to all who have no need to encumber their machines with a troublesome set of acetylene lamps, a weighty and attention-demanding accumulator, or an expensive and complicated dynamo outfit.

Another product of the extensive Ward and Goldstone factories is the motor cycle Voltalite generator. This is an improved model of the well-known pedal cycle friction-driven dynamo. Its armature is carried on ball bearings of the journal type, and although it only weighs a few ounces it is quite capable of brilliantly illuminating an eight-volt head lamp and four-volt tail lamp bulb in series. The current generated is alternating, and therefore unsuitable for battery charging, but a dry battery could be used when the lights are required and the engine is stationary.



MAGNETO LIGHTING.

DURING a recent visit to the works of the Runbaken Magneto Co., Ltd., at Manchester, we examined a special lightweight ignition and lighting outfit which will shortly be placed on the market.

Simplicity is the keynote of the device, which consists of a special end cap for the contact breaker of a standard Runbaken magneto, a head lamp, tail lamp, and combined battery and switch box, the latter unit being carried on the head lamp bracket. The set utilises the idle primary voltage wave, which is generated in single-cylinder magnetos (and which is of some intensity when the armature runs at engine speed). The current is distributed to the collector face in the ebonite end cap referred to above by means of a copper gauze brush carried on the insulated portion of the contact breaker, which communicates with the magneto low-tension winding. A single wire leads to the battery switch box which also carries a miniature four-volt accumulator. On the top of the box are press button switches marked "charge" and "lights." The automatic switch comes out of engagement when the engine is stationary, and an indicator shows whether the battery is on charge or not.

A slightly enlarged end-cap on the contact breaker is the only outward difference between the Runbaken magneto generator and the standard magneto.

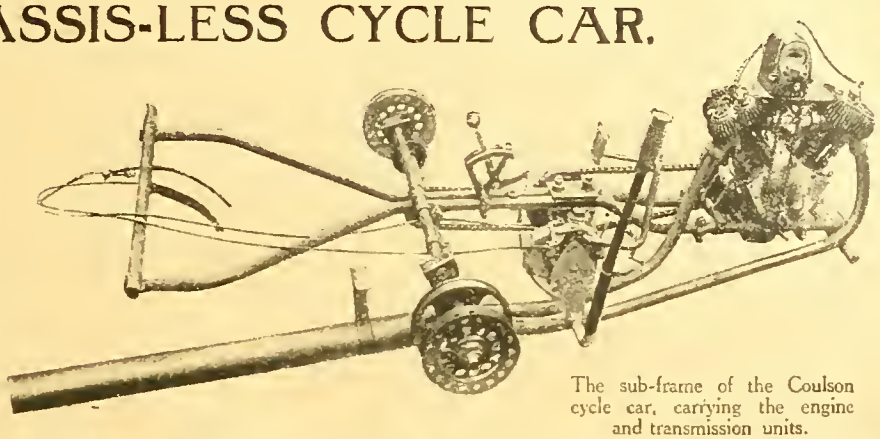
Handle-bar bracket carrying head lamp and battery and switch box of the Runbaken magneto lighting set.

The high-tension ignition is in no way interfered with, nor is the accessibility of the contact breaker reduced. A useful feature of the rear lamp is that the bulb holder may be withdrawn from the lamp body and used as an inspection lamp, an advantage which will be appreciated by most riders.

AUTOMATIC EXHAUST CHOKE VALVE.

NUMBERS of baffles, some mechanically and some automatically operated, for open exhaust pipes are finding their way on to the market. The one we illustrate belongs to the latter class, and consists of two drilled flaps hinged on a bar in the pipe and held in the "shut" position by a light spring. It is claimed that the exhaust pressure at low speeds will not open this valve, and thus a certain degree of silence is obtained for town riding, passing restive cattle, etc. The device is the design and patent of Mr. F. C. Ebbutt, "Woodcote," Stafford Road, Wallington, Surrey.

Baffling the exhaust—and the police.



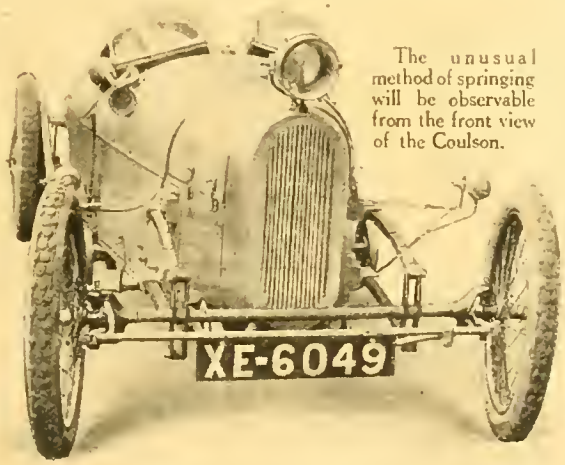
A CHASSIS-LESS CYCLE CAR.

Experimental Four-wheeler Produced by the Makers of a Well-known Motor Cycle.

THE well-designed cycle car may in the future prove to be a serious competitor to the *de luxe* sidecar outfit. The makers of the Coulson-B motor cycle (the F. Aslett Coulson Engineering Co., Ltd., Albion Works, Albion Street, King's Cross, London, N.1) realise this, and have lately been experimenting with a view to introducing a light four-wheeler of the cycle car type, and their first experimental machine bristles with ingenuity.

A first model of any motor vehicle naturally has considerable room for improvement, but there is very little doubt that the new Coulson shows distinct promise. There is no chassis proper, the engine and transmission units being carried on a sub-frame bolted to the body at three points, so that, in case of a serious repair being necessary, the whole sub-frame may be lifted out bodily with the minimum amount of trouble.

The actual vehicle under review has clearly too little ground clearance, but in subsequent models this point will be remedied. At present the final transmission is by belt, but we understand that the production model Coulson cycle car will drive direct from the countershaft to the rear wheel by chain and without a differential.



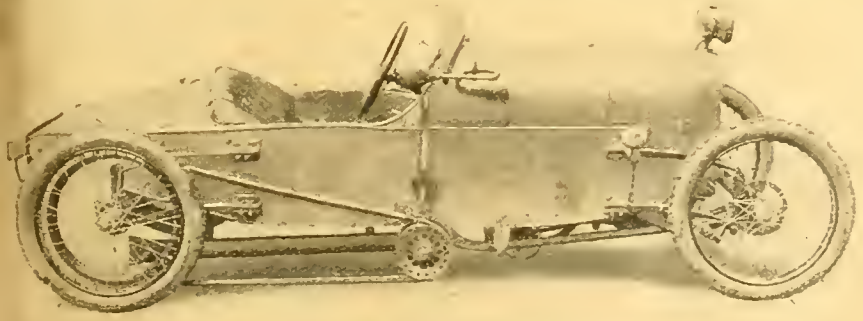
The sub-frame of the Coulson cycle car, carrying the engine and transmission units.

A 6 h.p. Blackburne Engine.

One of the new 6 h.p. Blackburne engines provides the power, and is attached to the forward end of the sub-frame. The bore and stroke of this engine are 71 × 98 mm. respectively, the capacity being 777 c.c. This engine is composed of two cylinders of the well-known 2¾ h.p. Blackburne type, and it is interesting that it is provided with the same crankshaft as the 10 h.p. engine. The magneto, it will be noticed, is placed on a platform above the engine, midway between the cylinders, and consequently it is in a very accessible position.

The present gear box fitted is of the three-speed kick-starter variety, but future models will be fitted with a new gear box containing a reverse and three forward speeds.

In the model we are describing, the starter mechanism is worked by means of a handle, which telescopes on to an arm projecting outside the body, enabling the engine to be started by hand from the driver's seat. The transmission continues by chain to the countershaft, the ball bearings of which are swung on a cross member of the sub-frame, so that adjustment of the chain is easily effected. On this secondary countershaft are two pulleys, the drive being by belts to the rear wheels. Adjacent to the off side pulley is a drum for a hand brake actuated by the side lever, and there are also two brakes upon the rear wheels. The first motion of the clutch pedal releases the clutch, and a further movement applies the brake. The steering is direct, the front wheel stubs being carried in well-designed steering heads.



The unusual method of springing will be observable from the front view of the Coulson.

Comfortable and Fast.

The body is suspended fore and aft on pairs of super-imposed quarter-elliptical springs, and attached to long shackles. The body is comfortable, and in all future models will be amply wide, while at the rear there is a dickey seat for a juvenile.

As will be seen, the photographs were taken before the vehicle was actually complete, as there were no wings; but when we were taken for a short run it proved to be comfortable, steady, and fast.

Off side of the Coulson cycle car. The final model will have all-chain drive, and the body will be raised considerably, giving greater clearance.

An Italian Team for the T.T.

OUR Italian correspondent writes that the Motor Cycle Club of Italy is taking a very active interest in the F.I.C.M., to which international body it has proposed the institution of an annual International motor cycle Grand Prix—a road race to be held on the same conditions as the International Six Days Trials, viz., each country to be represented by one or more teams, and the winning country to organise the race on its own territory in the following year.

It is to be hoped that British manufacturers in their own interest will find their way to support some of the most important Italian events this year.

The best British motor cycles are in great favour in Italy, despite their high cost owing to the rate of exchange.

Italy, on the other hand, hopes to be able to send a team for the T.T. this year, the greatest difficulty, however, being the low value of the lira, which makes this proposition rather a tall order. Anyhow, it is very probable that it may materialise, and it would, no doubt, be very interesting to see Italian riders and machines in close competition with the best British riders. Not since 1914 has the T.T. had anything of an International character.

The Balance of Motor Cycle Engines.

Further Opinions on this Important Question.

ALTHOUGH the discussion which has followed our article on the balance of motor cycle engines, which appeared in the issue for February 3rd, is not one in which the average motor cyclist can take part, we have received a large number of letters, which prove that its interest has not been confined to experts. The subject covers points which are of vital importance to all riders. A large number seem to appreciate this, but leave the discussion to those qualified to debate on the points raised.

Below we are able to give some more opinions from designers, which, we venture to think, will be read with interest by the large coterie of engineers among our readers, and which will at least show the uninitiated some of the factors with which designers of motor cycle engines have to grapple in order to produce smooth running engines for the use of the motor cycling community.

An Opinion from T. S. Bentley, A.M.I.M.E.

The writer of "The Balance of Motor Cycle Engines" was quite right when he stated that the alteration should be made "at a distance from the centre exactly equal to the crank radius."

The matter has been queried by Messrs. Georges Funck and Arthur Booth in their communications quoted in the issue for February 17th, but *they have both overlooked the distinction between static and dynamic balance.*

It is quite true that, as far as static balance is concerned, it is immaterial at what distance the counterbalancing is done provided that the product of the weight and radius gives the required amount.

Following our comprehensive article on engine balancing which appeared in the issue for February 3rd, we have received many interesting letters from designers, debating on the several points raised. Two of these were given in "The Motor Cycle" for February 17th, and we are now able to quote the opinions of several more engineers qualified to discuss the problem.

When we come to running balance, however, this is no longer true. *The radius or leverage is constant at all speeds, but the effect of the weight varies as the square of the velocity.* In practice it is often impossible, or at any rate very inconvenient, to balance at the same radius as the crank, and as the balancing is only an approximation anyway, it is almost always done at the flywheel rim. As the effect at this greater radius is magnified when running—the amount depending upon the speed—it is usual to underbalance so as to average the result. This must not be forgotten when considering Mr. Funck's recommendation to "overbalance."

Your article could only give definite figures by barring out the variable introduced by differences in velocity due to unequal radii.

Balancing a Two-stroke.

Mr. R. E. Coleridge, of Yarlet Hall, Stafford, gives a personal experience in rebalancing.

The article which appeared in *The Motor Cycle* was of exceptional interest to me. My machine is a two-stroke of a new design, and I was much troubled by engine vibration, which was so bad that various parts of the engine were continually breaking. Among other things, the roller crankshaft bearing broke the cage, and a roller broke the piston. After this, I thought it was time to rebalance the engine. I had an aluminium piston made, which I found to be 9 ounces lighter than the original. According to your article the piston is still 1 ounce too heavy for perfect balance. Originally, then, the piston was 10 ounces too heavy (weighing 27 ounces). I wrote to the makers, who replied that the balance of the engine was carried out by their own special formula, and could not be altered.

The improvement in running smoothly is a revelation, and needless to say, I do not think much of the makers' balance and design. There is still a slight transverse couple owing to there being only one balance weight.

The writer of the article remarked that new engines should be found correct, but my experience shows that there are exceptions. Has any other reader had similar experiences?

Relative Unbalanced Forces.

Mr. F. Strickland, who is well known in the mechanical world, draws attention to the point first raised in our article on the best angle for a twin cylinder engine, and the effect of connecting rod length.

I was very much interested indeed in your excellent article on the subject of engine balancing in the issue of February 3rd. The question of the effect of the length of connecting rod on the best weight for balance, and the best angle between the cylinders of a twin, is a matter I do not remember seeing raised before, and is of considerable importance.

The information as to the actual relative unbalanced forces is also of very great interest, as it enables one to see at a glance the main results of varying the essential points of design. Such a table of results is given in Professor Sharp's book, "Balancing of Engines: Steam, Gas and Petrol," but I find on referring to it that the values are not in the same proportion as those in your article. The differences are shown in the enclosed table. The first two columns give the actual units as in your article and Professor Sharp's book respectively, and the latter two give the relative values of the twins and radial, taking the single as unity.

Now Professor Sharp did not take the same proportion of connecting rod to stroke as your author, his rod being $2\frac{1}{2}$ strokes long in place of $1\frac{3}{4}$. Also your author takes slightly different weights of balance weight for the twins and radial, viz., .54, .53, and .52 in place of .5. I should like to ask the author whether this entirely accounts for the different relative unbalanced forces, or whether there is some other cause for the divergence? In the case of the 60° twin it will be seen that there is a very great divergence indeed. In the case of the radial there is also a great divergence as compared with the 90° twin, but I am not sure that I have understood the author correctly with regard to the sized cylinders he has assumed. He says that the radial is of "the same total capacity as the twin," which I have read to mean that *each* cylinder of the radial is two-thirds the capacity of each cylinder of the twin. As Professor Sharp assumes that all the cylinders are the same size, I have therefore added 50% to the units given in the article. If the units given in the article were for *cylinders* the same size as the twins and

	Actual Units given.		Relative Units, taking Single-cylinder Half-balanced Engine as 100.	
	The Motor Cycle.	Professor Sharp.	*The Motor Cycle.*	Professor Sharp.
Single-cylinder, reciprocating parts half-balanced	44	14.24	100	100
60° twin, reciprocating parts half-balanced	31	24.67	71	173
90° twin, reciprocating parts half-balanced	20	8.14	45	57
Three-cylinder radial, reciprocating parts half-balanced	33	8.63	75	61

Rotating parts assumed to be fully balanced and cylinders same size in both cases.

The Balance of Motor Cycle Engines.—

the single, the units would be 22 and relative units 50 in place of 75, and this would agree much more closely with Professor Sharp.

There is another point with regard to balancing on which it would be very interesting to have some more information: that is, whether the theoretically best balance gives the best result in practice. In single-cylinder engines, for example, a mathematical treatment assumes that it is best to reduce the unbalanced force to a minimum, which involves the vertical and horizontal forces being practically equal. It is then possible to reduce either of these by increasing the other. It is quite likely that evenly dividing them is the best compromise, but it does not necessarily follow, and it would be very interesting to know whether it is found in practice that vertical vibration is more objectionable than horizontal, or *vice versa*. I trust the author will realise that it is simply because it appears to me that his information is very interesting that I am asking for more.

OILING EXPOSED PARTS.

Careful Attention that may prove Destructive.

MOST riders are in the habit of anointing external working parts, such as springs, brake connections, etc., with periodical doses of oil—in fact, it may be said that practically every careful rider tends his machine in this way; but the writer has come to the conclusion that more harm than good may result from too liberal a use of the oilcan. Very often the oil thus left about merely serves to accumulate grit, which works between the friction faces, and, while entirely defeating the ordinary purposes of lubrication, it further unites with the oil to form a fine grinding paste, which causes the moving parts to wear far more rapidly than they would wear if left entirely dry.

A Case in Point.

To quote a case in point: The foot brake of one of my machines passes through a bearing directly under the crank case, and any overflow of oil working out of the timing cover flows straight down to this bearing, which, resultantly, is always in a "perfectly lubricated" state—that is, simply squelching oil. But this same bearing and its adjacent joints are also exposed to a good deal of grit, and recently, taking the whole brake mechanism to bits, I found these "well lubricated" parts to be completely worn out, while the other joints, which are subjected to an equal amount of wear, but which always worked dry, were entirely unworn. It may be said that engine vibration was the cause of wear of the parts so adjacent to the crank case, but this is not so, as I have repeatedly noticed that the worst vibration takes place at the other end of the adjustable rod, which sets up a perceptible dither at its back wheel extremity. It is merely that the oil has gathered with it a considerable amount of grit, and in future I intend to keep all such comparatively idle joints as brake joints bone dry. If the design of the brake is anything like correct, oil is not really necessary for its working.

I do not mean to infer from the foregoing that spring forks, etc., should be run dry, but I certainly think that if such parts are exposed to grit one needs to use considerable discretion in oiling them, and it is thoroughly worth while to devise some grit-excluding cover. The lubricating of all these parts should be by Stauffer greasers, so that the grease is injected internally, instead of the oil being applied externally, and thus bearing the grit with it as it works in. At one time I used to drop oil on to the shackles of my sidecar springs, heedless of this, till I found that they were wearing rapidly. I now enclose these parts in little leather jackets, and they seldom require any attention at all.

"Dry" Lubrication for Chains.

The same applies to open chains. In my opinion it is a mistake to keep an open chain in what is considered to be a "well lubricated" state, for the accumulation of grit merely defeats the lubricant and grinds the chain to bits. Exposed chains should be kept well lubricated but dry—that is, they should be soaked in hot, stiff graphite, and all external grease should be removed ere they are fitted. All the lubrication it is desirable to give a chain is internal, not external. There is no object whatever in having the teeth of the sprockets wet with oil. For the reasons already set out the chain will run much better if the teeth are entirely dry. This applies, of course, only to an exposed chain, which lives a fairly hectic life in any case. The ideal conditions would, of course, be for the chain and its sprockets to run entirely immersed in clean oil: but since we have that fiend grit to contend with, we can merely choose the lesser of two evils.

H.M.B.

SIDECAR TAXIS IN LONDON—AND ELSEWHERE.

IT was stated by the Home Secretary in the House of Commons last week that sidecar taxis are not to be licensed in the Metropolitan Police area, a committee having advised against them. Mr. Shortt further affirmed that there are very few of these vehicles in commission in provincial *towns*, and that *they are not popular*. Probably he mentioned "towns" advisedly; or is it that he has no information from the cities of Birmingham and Nottingham?—to name only two large provincial centres where the movement has been in existence for some months now, continues to make rapid headway, and, to quote the words of the Chief Constable of the latter city, is "giving every satisfaction to the public." There are now a dozen sidecar taxis in Birmingham alone.

Popularity, as recorded by numerical strength, cannot be expected of a branch of transport so young; but, surely, actual popularity with the Man in the Street is better judged from a demand which is steadily increasing the number of outfits already in commission, and which has led to the important additions of Glasgow, Leeds, and Coventry within the last six weeks. Bradford and Brighton, too, have approved one type of sidecar taxi outfit; and both in Liverpool and Oldham the matter is receiving favourable consideration by the licensing authorities.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

WHO ORIGINATED DISC WHEELS?

Sir,—Referring to the correspondence about "Who Originated Disc Wheels?" am I not right in believing that Julius Cæsar and Co. took out patents for the fitting of disc wheels to their 2 h.p. and 4 h.p. chariots?

And, at any rate, did not that progressive lady Queen Boadicea have not only disc wheels on her sporting model, but also well-designed hub caps to do away with the use and encumbrance of a hooter in her frequent T.T. speed events? T.E.M.

Cambridge.

PREVENTION OF CREEPING TYRES.

Sir,—Reverting to your correspondent "S.A.B.'s" tip for the prevention of creeping tyres in the 10th February issue, I think I can go one better. Make one or two applications to the whole of recess of the rims with French polish; of course, allowing it to harden off before replacing tyres. It will be just "tacky" when tyres are removed.

I have found it not only a prevention to "creeping" tyres, but renders them impervious to moisture, and hence rusty rims. When tyres have been removed the rims are in splendid condition, even if after a long period. J.B.B.

London, S.E.3.

SHORT MEASURE FROM PETROL STAND-PUMPS.

Sir,—A few days ago I was supplied with a gallon (?) of petrol from one of the latest petrol pumps installed in a town near London famous for its motor traffic. I complained at the time of what I believed to be hopelessly short measure, but was assured this could not possibly be the case. At the time I said no more, and went my way. However, on covering nearly twenty miles less on my gallon than usual, I determined to have the accuracy of the pump tested.

This the garage owner agreed to do, and, as I expected, a "measured half gallon" proved to be but three to three and a quarter pints! And, mark you, I was assured this pump had been passed three hours before by an authorised inspector as correct! Is this good enough? DISGUSTED.

Weybridge.

TRACING AN ELUSIVE NOISE.

Sir,—It would be interesting to know if any of your numerous readers have ever experienced a similar occurrence to that which befel me recently with my 7 h.p. twin.

For no apparent reason, as there was no lack of oil, the engine developed an annoying squeak, which was most persistent. In the course of my investigations, I made certain, as far as possible without dismantling the engine, that it actually was getting the correct amount of oil. However, after considerable time had been spent, the squeak could still be plainly detected while the engine was running; with the machine stationary, and in spite of my efforts to trace it, it remained as elusive as ever. Finally, as I was on the verge of despair, I noticed a small oil bubble ejected between the timing cover and the crank case, and its appearance synchronised with the squeak. This gave food for thought, and, on closer scrutiny, I discovered that one of the timing cover screws had slackened. Although it was hardly perceptible, it was sufficient to allow the paper washer between the two surfaces to form a very effective reed, through which escaping crank case pressure produced the squeak. In addition, I found the release pipe partially choked with mud, which, naturally, accentuated the escape of pressure from the joint.

JOHN WITHAM.

FOLLOWING THE SPORT ON PAPER.

Sir,—After reading "T.P.'s" letter in *The Motor Cycle* of February 10th, I started wondering how many, like "T.P." and myself, are readers but not riders.

I have been a regular reader for some time, but, so far, funds have not run to the purchase of a machine. However, being a "non-owner" does not prevent me from taking a great interest in the more fortunate ones. N.G.F.

Jarrow-on-Tyne.

UNNECESSARY DANGER SIGNS.

Sir,—Now that the designs for road signs are being standardised, I think it advisable that the following rule should be made regarding them: "That no person be allowed to erect any road sign without first obtaining permission and approval of the proper authorities."

My reason for suggesting this rule is that large numbers of owners of private carriage drives opening on to main roads erect one or more of the following signs: "Caution," "Drive slowly," "Carriage drive," or a red triangle. The erection of these signs causes every motorist to slow down unnecessarily, as the responsibility for caution in these circumstances lies in the hands of the user of the carriage drive, who probably only uses it on an average of three or four times daily. CYRIL C. TWISS.

ORDER OF MERIT IN THE SIX DAYS TRIAL

Sir,—In *The Motor Cycle* of the 10th inst. you commented on the Rev. J. M. Philpott's classification of the Six Days Trial performances.

With reference to your sentence, "Obviously a cautious rider who was content merely to tour round the track at his qualifying speed is disadvantageously compared with the reckless rider who could not resist the track's 'all-out' invitation," I should like to point out that in a big event like the Six Days most riders use great care, with the hope of thereby attaining a first-class award. Obviously, therefore, a rider who felt confident that his machine would stand up to "all-out" work is worthy of greater praise than one who thought it necessary to drive only at his qualifying speed so as not to risk trouble.

Oxford. PEGASUS.

It will be seen from the above photograph that all big twins are not unwieldy. Few machines larger than lightweights provide the low riding position obtainable with a Zenith. The rider is A. O. Gruzelier, hon. trials secretary of the very live Surbiton and District M.C.C

SPEEDS OF AMERICAN BIG TWINS.

Sir,—In reply to my letter concerning the high speeds of American motor cycles, as compared with the speed of British machines of the same capacity, published in the issue of January 13th, Mr. L. W. G. Hartley states that if American machines were to compete at Brooklands their speed would be found to have dropped to a considerable extent.

This may be true to a certain extent, but it does not alter the fact that American machines are faster than British ones equipped with engines of similar cylinder capacity.

If Mr. Hartley were to look at the records made in Class E at Brooklands, and recently published in *The Motor Cycle*, he would find that out of the thirty records obtainable exactly seventeen are held by the Indian ridden by H. Le Vack, the remaining thirteen being held by smaller machines, such as the Norton and Rudge singles and the A.B.C. flat twin.

And, again, in Class 1, for motor cycles of 1,000 c.c. with sidecars, twenty-eight records are obtainable, and all of these are held by American machines, notably Indian and Harley-Davidson.

Does not this prove that, as far as machines of big cylinder capacity are concerned, America takes the lead for speed? J.K.D.C.

London, S.W.1.

Sir,—In your issue of January 27th, under the heading of "The Lure of Speed," one of your correspondents, who signs himself "Hanlindex," states that, after owning several American big twins, he has now turned to a British-made twin of 8 h.p., and finds that his machine is nearly 10 m.p.h. slower than his former mount.

I own a British big twin, famous as a sporting solo mount, which is fitted with a well-known proprietary engine. Not having owned an American machine myself, I cannot speak from experience as to its speed capabilities, but I am certainly disappointed to find that my machine will only just exceed 50 m.p.h.

The machine was returned to the engine manufacturers to be tuned up, when I was informed that it should exceed 60 m.p.h. The machine, by the way, is one of this year's models.

After "tuning" (which, incidentally, cost over £3), the machine was not even 1 m.p.h. faster. The makers now say that the engine is well up to standard for power and cannot be tuned for more speed.

Imagine the makers of an American machine stating that they could not tune the engine for more than 50 m.p.h. There is evidently something wrong somewhere if a British machine of this power cannot be made to exceed this speed when ridden solo.

I, too, have pondered over this difference between the products of the two countries, and should very much welcome some explanation. DISAPPOINTED.

London, N.7.

WHO ARE THE MYSTERY MEN?

Not an advertisement for a cinema serial, but Douglas-mounted, hooded men associated with the Wood-Milne mystery man, in which connection £2 is offered to persons able to identify him. Here he is seen in Bristol with a considerably mystified policeman.

DEVELOPING "JOHN CITIZEN'S" MACHINE.

Sir,—In your issue of January 20th your correspondent, Mr. H. Mortimer Batten, accuses the A.C.U. of crabbing the development of the light solo mount by its proposed enforcement of sidecars for all machines over 350 c.c. capacity in the 1921 "Six Days." Surely there is another point of view from which the matter may be regarded. The average motor cyclist is, as "Ixion" has frequently pointed out, very much of Poy's "John Citizen" type, and what he requires most is some test which will tend to evolve a machine of the cab-horse variety, with an ability to perform a fair amount of moderately heavy work, with the minimum of attention and sustenance. The light solo is more of a thoroughbred; this, to the majority of its users, constituting its great charm. In devising any sort of a test it is, after all, usual to approximate as nearly as possible to actual running conditions—more than half of the machines in the class under consideration will have sidecars buttoned on to them sooner or later, so why try them solo?

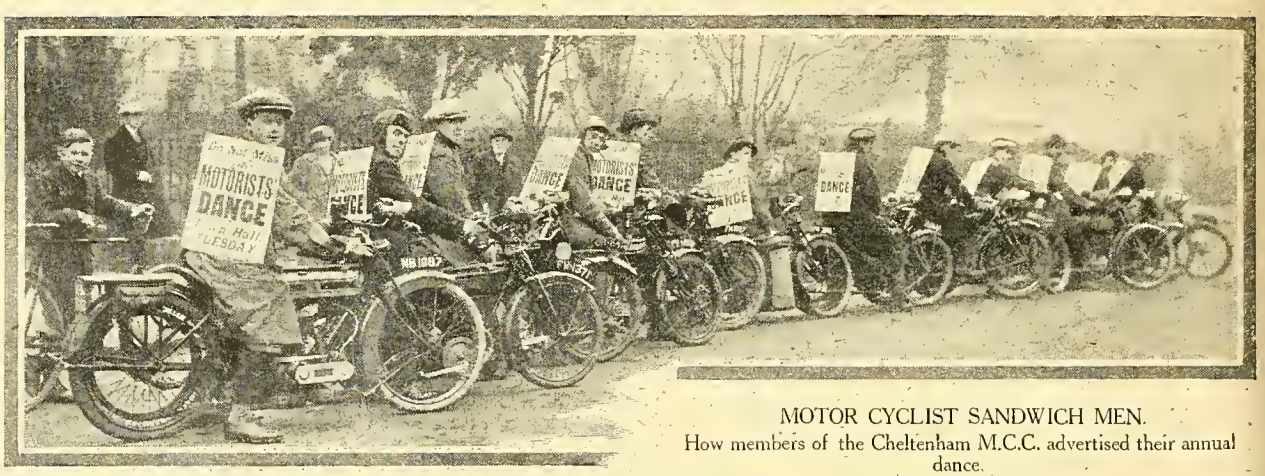
Let the A.C.U. "Six Days" be "John Citizen's" week; there are any number of other events by which the prospective purchaser of a light solo can be guided. The type of man who rides such a machine is usually a keen and moderately experienced motor cyclist who devours the trials' reports with avidity, whereas they probably bore poor John stiff. He only reads them under force of necessity, and then very naturally turns to some classic and highly respectable event such as the A.C.U. Six Days.

Devonport. HALF LITRE.

IDEAL CONTROLS.

Sir,—Seeing the question of ideal controls again making its appearance in your correspondence columns, I have yielded to the temptation to express what has been my opinion for several years past.

Although I agree that it is not possible to put car practice into all details of motor cycle construction, the matter of actual control is one which seems to be more or less followed in the motor cycle, not so much in the mode of operation of the various levers, etc., as the theoretical functioning of the whole system.



For instance, in car practice, the controls are so arranged as to allow of the operation of the clutch and throttle during the changing of gears; but in some motor cycles this is not possible owing to the same hand being given the two jobs of throttle control and gear changing.

The type of machine which gave an almost ideal "lay out" of controls was, in my opinion, the Triumph of 1916 and 1917. There we had the right hand to control the throttle; the left hand the clutch and exhaust lift. The gear lever lending itself to adjustment for foot control, we had that on the right, and the left foot mastered the brake. The magneto control was also with the left hand, and the half-compression device with the right-hand foot, as also the kick-starter.

For instance, when astride the machine, the half-compression raised with the right foot, the kick-starter, the throttle, and (if necessary) the exhaust, can all be used together to encourage an easy start. Then half-compression lowered (right foot), first gear engaged (right foot), during which time the clutch is held out (left hand). For getting away both feet can be resting on the ground (a great asset on greasy and frosty roads). For changing up, the clutch and throttle combined, in conjunction with the gear change, allowed of a much smoother and more car-like change than the usual bump of the exhaust lift change. The hands need never be removed from the handle-bars except for oiling. That, I must admit, might be improved upon.

In the case of the "lay out" on a sidecar outfit, I would not be so emphatic, as then one has not to think about balance in the case of riding in slow moving traffic. As long as one can operate the throttle, clutch, gears, and brake, all at the same time when necessary, that should suffice. What is objectionable is that in many cases the attention given to one movement means the neglect of another.

Cambridge. BASSO.

MOTOR CYCLIST SANDWICH MEN.
How members of the Cheltenham M.C.C. advertised their annual dance.

AUTOMATIC LUBRICATION.

Sir,—Being the happy owner of a Sunbeam solo mount, I have read with great interest the letters of Mr. D. Esdale (January 20th) and "K.B." (February 10th).

I think a great many owners of British four-stroke motor cycles would find it very valuable to get to know if the system of the Doncaster Eng. Co. is practicable on four-stroke singles and with what result. Is a non-return valve necessary? By what means is it possible to avoid contaminating the oil with soot from the exhaust gases?

I suppose I need not mention that on my Sunbeam I intend to retain the existing Best drip feed pump unaltered, letting the exhaust pressure feed the oil through the pump, and the sight feed glass. N. E. BERGSTROM.

Stockholm.

A PLEA FOR REFINEMENT FROM SWITZERLAND.

Sir,—May I trespass on the valuable space of your very interesting paper, of which I am an ardent reader every week. In the present days of *de luxe* outfits, it seems rather strange that machines like the famous and excellent Harley-Davidson and others are not supplied with such an up-to-date refinement and convenience as quickly detachable and interchangeable wheels, as is the case with most really first-class English machines.

I am an all-weather rider, and, owing to the difficulty of obtaining British machines and their spare parts in this country, my choice fell on the Harley-Davidson, which is very well represented here, and with which, I may add, I am otherwise entirely satisfied. When taking delivery, I was rather struck by the absence of the above-mentioned refinements. Another item, which could be expected on such a high-priced machine as the Harley, is a fully enclosed transmission, with the chain automatically lubricated. I am sure this would lengthen the life of the driving chain considerably.

Sursee, near Lucerne, Switzerland. WINDY.

THE LONDON-LAND'S END.

Sir,—With reference to your article on the "Land's End" regulations, I quite agree that too little distinction is allowed by club officials for differing powers of competing machines, and makes one think that the ruling body are out to make lightweights "small" in more senses than one. It would be a good object lesson for one of them to ride a two-stroke through the "Land's End" or "Edinburgh." My experience is that many riders of "big 'buses," who rely on plenty of reserve power, would make a poor showing on a lightweight, and yet when they "tear up" a hill, perhaps passing a lightweight *en route*, they are generally applauded by the onlookers, as doing something wonderful, whereas in nine cases out of ten, they've only opened the throttle a little wider. Take, for instance, in the case of puncturing, a high-powered machine, capable of touching fifty to sixty, can soon make up the time lost, whereas a lightweight rider doing thirty to thirty-five is again handicapped.

Hills do not worry a two-stroke in good condition and suitably geared, but without any reserve power you cannot get it both ways, *i.e.*, speed and hill-climbing. I admit it is nice to ride a high-powered machine with the feeling that nothing, bar accidents, will stop you, but the boredom must be painful, and my advice to those who want more to do on a trial is "ride a lightweight." The fact of cars entering always strikes me as a joke; but I could expound on that for hours. GEO. T. UDALL.

BRRRH!

Sir,—I should like to draw your attention to what is, perhaps, the greatest insult which the poor old British climate has ever had to suffer. I admit we have all said hard things about it: but there *are* limits. When the A.C.U., in announcing a trial for April 27th, expressly describes it as a "winter" trial, I feel that these limits are by way of being overstepped. "Winter," forsooth!—and Whitsuntide less than three weeks away. This gratuitous provocation is likely to make "rude Boreas" ruder than ever. If the 1921 Derby is abandoned owing to deep snow, and if T.T. entrants find the sparks frozen at their plug points, nobody need be surprised.

R. D. C. GRAHAM.

WHEN WILL PRICES FALL?

Sir,—In the article headed "When will Prices Fall?" you give your opinion that prices of machines will not fall while motor cycle manufacturers have still stocks of material bought when prices were high, and that the price of the finished machine will be proportionate to the prices then paid.

If this is so, motor cycle manufacturers are in a very favoured position. The prices of nearly all materials have fallen, and those people who have stocks in hand are now compelled to cut their losses. The general thing is to buy at to-day's price, which, being low, allows a profit to be shown as against the loss on the material purchased at a higher figure.

All traders, or nearly all, are having a bad time at present. But to tell them that, if they are going to purchase a new motor cycle, they will have to pay a price sufficient to allow the makers a profit on material bought at about double the present market price is, in my opinion, the one thing to make them to decide not to buy at all. J.W.D.

Manchester.

PETROL-VAPOUR LAMPS FOR ROAD USE.

Sir,—The other evening I had the privilege of inspecting a petrol vapour lamp in operation at the house of one of our customers. I was very much struck with the nice steady light which it gave out. Could not such a system be made practicable for motor cycle lighting?

I will admit the greatest difficulty would be in getting a mantle sufficiently strong enough to withstand vibration, but this should not be impossible. Otherwise I should think such a system would have much to commend it. It ought not to cost more than an acetylene outfit either in initial cost or in upkeep; and as long as there was petrol in the tank for the engine there would always be a supply for the lamps.

I suppose the petrol for the lamps would have to be carried in a separate tank, so that the air could be pumped into it.

H. V. GOOSLING.

GETTING OUT OF LONDON.

Sir,—In answer to Mr. R. W. Watts's lament in your issue of the 17th ult., which I heartily endorse, I suggest, for his assistance, the following two routes of escape from the tram route horrors when travelling north and north-west from town:

For Barnet.—Leave the North Road at Highgate G.N.R. Station, turn right to Muswell Hill, then Colney Hatch Lane, "follow your nose" right to Whetstone. Better still is to strike right on to the Hornsey Road just before the G.N.R. crosses over Holloway Road, and follow straight ahead through Crouch End, bearing left at the Clock Tower to Muswell Hill, etc.

For Edgware.—Leave the Great North Road after East Finchley Station, turn left along East End Road, cross the Regent's Park Road (trams), turn left along Hendon Lane, and continue towards the Aerodrome, but turn right just before the railway (M.R.), thence more or less straight (but winding) to Edgware. M. A. WINSTONE.

Sir,—I was interested to read the opinion of your correspondent, Mr. R. W. Watts, regarding the condition of the main Cricklewood-Edgware road; and, being one who has watched it change from what was, ten years ago, an excellent highway, into little better than a third-rate B.E.F. gun track, I can fully substantiate all he says. (I know Mr. Watts will tell me that a gun track is not spoiled by tramlines!)

As a matter of fact, early last year I wrote warning your readers against the use of this road as a route to the North, and remarked at the time that the trams enjoy a permanent way several inches above the "river bed," which your correspondent and his taxpaying fellow motor cyclists are condescendingly allowed to use.

If Mr. Watts requires an alternative route out into Bucks, I would suggest he turn off into Dollis Hill (the third turning to the left after passing under the railway bridge by the Cricklewood L.G.O.C. garage), keeping straight on through to Neasden, and taking the left-hand fork at the top of Blackbird Hill. This is purely a country lane route, and is narrow and circuitous; but, after leaving Cricklewood, provides a pretty and *safe* means of reaching Harrow, which, I am sure, Mr. Watts will agree is an excellent centre for the district he appears to like so much, and which I, too, think is hard to beat for the "average Sunday runs" of which he speaks. STANLEY J. BOND.

MOTOR CYCLE WHEEL DESIGN.

Sir,—Mr. Douglas Leechman's paper on "Motor Cycle Frame Design," given in a recent issue, should stimulate manufacturers to pay more attention to that very important part of their product. As a designer of structures, I have often been amused by the curious ways in which the gap between the front and rear axles of a motor cycle is bridged.

THE PARIS-NICE TRIAL.
F. J. Price, a British rider, on a British machine—the lightweight Diamond.

In the design of wheels also the study of elementary mechanics appears to be neglected. The ordinary motor cycle wheel is represented in diagrammatic section in fig. 1 of the drawing enclosed. It would offer considerably greater resistance to shocks inclined to the plane of the wheel if constructed as shown in fig. 3, while its vertical or weight-carrying

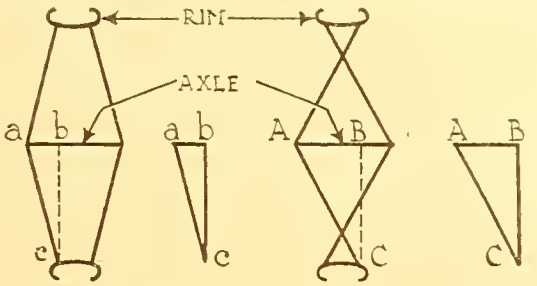


FIG. 1 FIG. 2 FIG. 3 FIG. 4

Diagrams of wheel stresses referred to in the letter of Mr. Edwin Smith, A.R.I.B.A., P.A.S.I.

strength would be only very slightly reduced. This is easily proved by comparing the triangles of forces (figs. 2 and 4). If *a c* and A C represent the strength of the spokes, then *a b* and A B represent their resistance to a force acting on the rim in a direction inclined to the plane of the wheel. Inspection of the triangles will show that A B is considerably greater than *a b*, which proves my argument.

EDWIN SMITH, A.R.I.B.A., P.A.S.I.

SUMMARY OF CORRESPONDENCE.

An Aberdeen reader, signing himself "M.J.R.," asks if any of our readers have had trouble with the A.B.C. transmission, and desires their opinions on the cause. He states that his own bevel-drive gave out in the first 800 miles.

"J.E.J." (Glam., S.W.) sounds a warning of the dangers of stowing away a lighted pipe in the pocket—particularly if the pocket be in an oil and petrol soaked overall jacket.

Mr. E. Hosier writes in praise of the Simplex motor attachment, and cites Meriden Hill, on the Birmingham-Coventry road, as an example of its climbing capabilities without pedal assistance.

Mr. H. Nelson Clark desires to thank all those who rendered assistance on the occasion of a recent accident at Pocklington in which his sidecar passengers and self were involved.

Letters continue to reach us regarding wonderful "dog (cat and other quadruped!) catching" feats. One, from a Naval correspondent, who frankly signs himself "Münchausen," deals with the adventures of a small fox in a 4in. exhaust pipe.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

	Price net.	Book post.
"HINTS AND TIPS FOR MOTOR CYCLISTS" Containing over 400 useful "wrinkles" and helpful hints in regard to motor cycles. Seventh Edition	2/	2/3
"TRACING MOTOR CYCLE TROUBLES." A system for tracing motor cycle faults and of remedying them when found. Fourth Edition ..	2/	2/3
"MAGNETOS." By A. P. Young. A complete treatise on magneto igoition for motor cars, motor cycles, and aeroplanes. Second Edition	4/6	4/10
"TWO-STROKE MOTOR CYCLES." A reliable treatise on Two-strokes, from the rider's point of view. Just published	3/-	3/3
"MOTOR CYCLE REMINISCENCES." By "Ixion," of *The Motor Cycle*	5/-	5/1
"THE MOTOR CYCLE" ROAD MAPS, England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.	5/6	5/10

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20 Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

THE T.T. RACE.

CONSIDERATIONS of safety make it imperative that the total number of competitors in the T.T. race should be limited. The Competitions Committee of the Auto-Cycle Union therefore made an announcement in the regulations issued in September, 1920, "That the total number of acceptances for each race is limited. If the number of entries exceed such limit, preference will be given to those received earliest."

Owing to the large number of entries already received, and to the fact that there is no limit to the entries that may be made by any one entrant, it is just possible that, if the date of entry is the sole limiting factor, some injustice may be caused.

The following further announcement therefore is now made:

(1.) Any number of entries may be sent in by any one entrant.

(2.) The whole of these entries, if in order, will be accepted, unless the maximum permissible for safety, *i.e.*, 100 in each race, be exceeded.

(3.) It is not anticipated that the entries will exceed the said limit to any great extent, but if this proves to be the case, the list will be reduced by cutting down multiple entries from manufacturers so far as may be necessary, but in no case to less than three per manufacturer; and in the event of a further reduction being called for, by reducing entries received from other than manufacturers.

So far seventy-three entries have been received, forty-two being for the senior, and thirty-one for the junior event. Particulars of these are given below.

It will be observed that most of the best known manufacturers of single-cylinder machines are represented in the senior list, including several who did not enter the race last year.

Senior Race.

No. of entries.	Entrants and machines.
1.	W. Royle (3½ Norton).
5.	Norton Motors, Ltd. (3½ Norton)
1.	H. Minton (3½ Norton).
1.	H. Mason (3½ Norton).
1.	Eric Williams (3½ Sunbeam).
1.	T. Mullon (3½ Sunbeam).
1.	Vivian Olsson (3½ Sunbeam).
4.	John Marston, Ltd. (3½ Sunbeam).
1.	H. F. Mase (3½ Sunbeam).
3.	Douglas Motors, Ltd. (3½ Douglas).
1.	Thos. Thompson (3½ Douglas).
1.	C. F. Edwards (3½ Rudge Multi).
1.	Fl.-Lt. J. O. Groves (3½ Rudge Multi).
3.	Birmingham Small Arms (3½ B.S.A.).
2	A. J. Stevens, Ltd. (2¾ A.J.S.).
2.	Frank Whitworth, Ltd.
3.	Triumph Cycle Co. (3½ Triumph)
1.	J. Mitchell.
1.	R. Carey.
2.	G. A. Miller and Co. (3½ Martin).
4.	Hendee Manufacturing Co. (3½ Indian).
1.	Alexander and Co. (3½ Norton).
1.	W. Hollowell (3½ Norton).

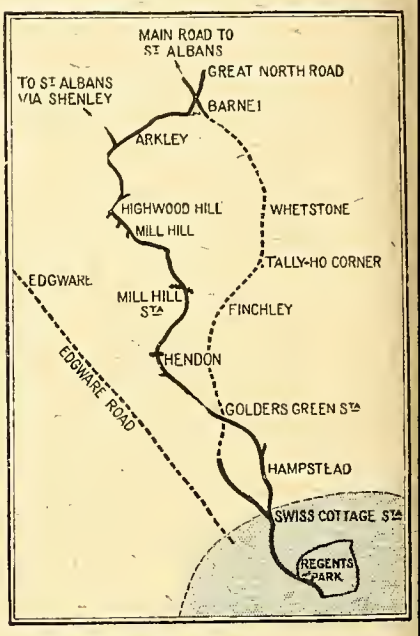
Junior Race.

1.	Tudor Thompson (2¾ Douglas).
3.	Douglas Motors, Ltd. (2¾ Douglas).
1.	J. Blake, Ltd. (3 Ivy).
1.	S. A. Newman, Ltd. (3 Ivy).
1.	Maudes' Motor Mart (3 Ivy).
1.	Dr. C. H. Hopwood (Royal Enfield).
3.	Birmingham Small Arms (B.S.A.).
6.	A. J. Stevens and Co. (A.J.S.).
1.	H. G. Henley, Ltd.
1.	A. H. Haden (New Comet).
1.	R. Carey.
2.	C. A. Miller and Co. (2½ and 2¾ Martin).
3.	New Imperial Cycles, Ltd (New Imperial).
1.	Alexander and Co. (2¾ Douglas).
4.	Butterfields, Ltd. (Levis).
1.	G. S. Davison (Levis).
31	Total of entries to date, 73

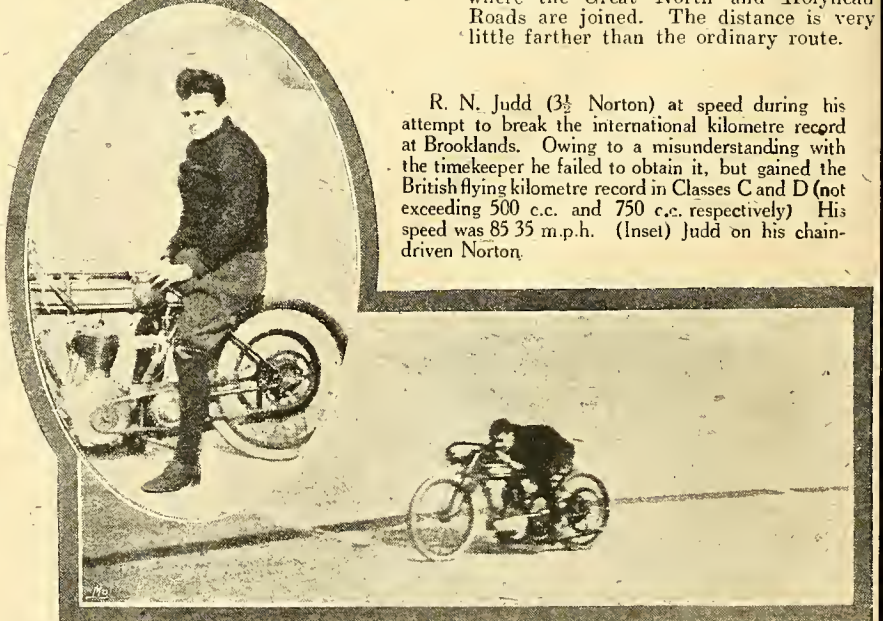
ANOTHER NORTON RECORD.



A GALLANT attempt on the international kilometre record was made on the 22nd ult. by R. N. Judd, riding a 3½ h.p. Norton, 79 mm. × 100 mm. standard model 16H. D. R. O'Donovan would have been the jockey on this occasion had he not unfortunately had a spill the previous day. However, Judd made a good attempt in glorious weather with a strong south-easterly wind blowing, which in no way aided him in his ride. His time was 26.21s., making a speed of 85.35 m.p.h. Owing to the failure to take his time in the reverse direction the record could not stand as an international one, but stands as a British record. He then made a second attempt for the International record, but just failed to get it, his time being 27.28s., a speed of 82.10 m.p.h. This record stands in the name of E. Walker, single-cylinder Indian, 82.5 mm. × 93 mm., 497 c.c., time 27.21s., speed 82.21 m.p.h., was made on Daytona Beach on April 15th, 1920, and is one of the records passed at the International Congress in Brussels.

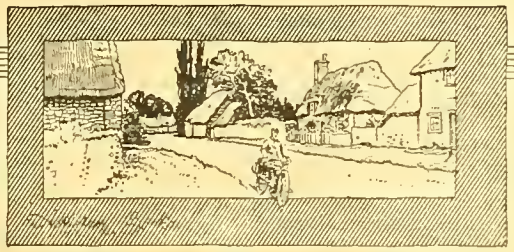
Judd's equipment consisted of Dunlop tyres, Binks carburetter, C.A.V. magneto, K.L.G. plug, and Coventry chains, while he used Speedwell oil and Pratt's motor spirit.

TO GET OUT OF LONDON FOR THE NORTH.



THE main Great North Road (western branch) out of London is in very bad condition, especially from Finchley to Barnet. Mr. W. H. Wells, captain of the Motor Cycling Club, has sent us a route which avoids the bad surface, is just sufficiently hilly to be interesting, and at the same time passes through some very pretty country.

There are two ways of reaching this route. One is to take the right-hand road at Swiss Cottage up Fitzjohn's Avenue, over Hampstead Heath, then down North End Road, past the Bull and Bush, crossing the Finchley Road and the tramlines at Golders Green; or to take the left-hand fork at Swiss Cottage Station, continuing straight on, turning left by Golders Green Station. The tramlines in this section of the road are in fairly good condition.



Avoiding bad roads out of London to the North. The dotted portions show bad surfaces and tramlines.

Leaving Golders Green Station, the route is continued through Hendon and Mill Hill to the bottom of Highwood Hill, where very pretty country is reached. Here turn sharp right for half a mile, and then left to Barnet Gate. At Barnet Gate turn right for Barnet, where the Great North and Holyhead Roads are joined. The distance is very little farther than the ordinary route.

R. N. Judd (3½ Norton) at speed during his attempt to break the international kilometre record at Brooklands. Owing to a misunderstanding with the timekeeper he failed to obtain it, but gained the British flying kilometre record in Classes C and D (not exceeding 500 c.c. and 750 c.c. respectively) His speed was 85 35 m.p.h. (Inset) Judd on his chain-driven Norton.

Words of Wisdom.

No man admires his car so much as when he is trying to sell it.—*The Autocar.*

In Holland.

His Majesty's Consul-General at Amsterdam reports that a catalogue library is being formed at the Consulate for use in dealing with enquiries as to supplies of British goods. British motor cycle makers should send their catalogues to His Britannic Majesty's Consul-General, British Consulate, Amsterdam.

No Sidecar Taxis in London.

On Tuesday, Feb. 22nd, the Home Secretary announced in the House of Commons that a committee had advised against the adoption of sidecar taxicabs in the Metropolitan Police area. Viscount Curzon asserted that they were very popular in provincial towns, but the reply was that there are comparatively few, and those are not very popular.

Troubles with Cars.

There are motor cyclists who, after a little misfortune, seem to think that only motor cycles are imperfect, and that cars are practically immune from trouble. The R.A.C. "Get-you-home Scheme" department has compiled some interesting statistics dealing with the cases dealt with by the R.A.C. These are interesting, and we now await a similar analysis from the A.C.U. The following are the R.A.C. figures:

ANALYSIS OF CASES DEALT WITH DURING THE YEAR 1920.

		Per cent.
1.	Power unit:	
	Cylinders and pistons	3.9
	Valves	.6
	Valve mechanism	2.1
	Crankshafts	1.8
	Lubrication	7.5
	Ignition	13.4
	Carburation	3.4
	Water circulation	1.9
	Starting mechanism	.5
	Not stated	1.5
		39.6
2.	Transmission:

710 M.T. Co. Reunion.

A reunion dinner and smoking concert for all ranks, past and present, of the 710 M.T. Company and Home Mechanical Transport will be held on Saturday, April 16th. The King's Hall, Holborn Restaurant, is the rendezvous, and the tickets will be 10s. 6d. each. Those wishing to attend should communicate with Mr. A. C. Webber, 50, Montholme Road, Wandsworth Common, S.W.11.

THURSDAY, MARCH 17th,

THE MOTOR CYCLE

ANNUAL SPRING NUMBER AND BUYERS' GUIDE

Reasons.

There are three reasons for a car failure, says *The Autocar*. One is given by the driver, the second by the manufacturers, and the third is the real reason.

The Cycle Car Definition in France.

Although the nature of a cycle car has been well defined by the sporting authorities, the French Government officials have, up to the present, been somewhat hazy as to what constituted a machine of this popular type. The matter is important from the standpoint of the taxpayer, for while the smallest motor car has to pay various taxes with a minimum of £20 a year, the cycle car has the advantage of a reduced tax of £4. On this account French cycle car owners have noted with unusual pleasure that the Government technical department has reported in favour of the adoption of the definition of a cycle car as a three or four-wheel machine, having one or two seats, weighing not more than 6 cwt. 89 lb., and having an engine with a piston displacement of not more than 1,100 c.c. With such a definition the cycle car owner knows exactly what he has to pay, and the anomaly of a machine being accepted as a cycle car because it had three wheels while another of no greater power is refused because it had four wheels will disappear. This will do much to develop the French cycle car industry, and it is hoped that a similar action will be taken by the authorities in this country.

Was it Leg Pulling?

One of our Scottish readers recently offered to exchange with an Irish correspondent various surplus articles of divers character for a Rudge Multi and sidecar. Among the former were a sea captain's telescope, two small and beautiful opera glasses, and a solid silver watch, but as each party had decided ideas on the value of their goods we understand that the deal fell through.

ESSEX M.C. ONE DAY TRIAL.

E. N. Edwards (6 Enfield sc.) after rounding one of the bends on York Hill near Loughton.

Northward out of London.

On page 266 will be found a "tram-line-avoiding" route out of London.

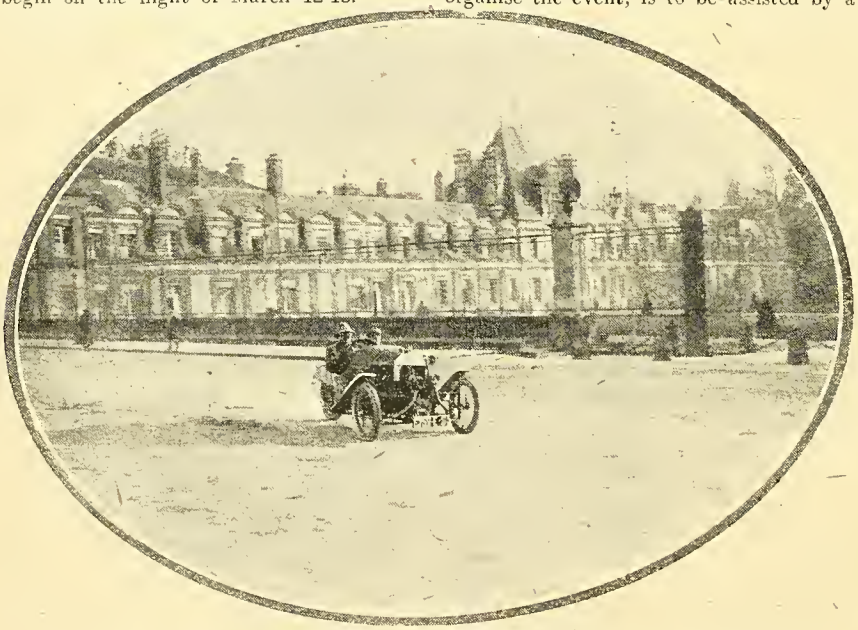
The Grand Prix.

The date of the Motor Cycle Grand Prix has been changed from Saturday, July 23rd, to Sunday, July 24th.

A Light Car T.T.

In 1922 the R.A.C. will organise a T.T. race for light cars in the Isle of Man.

Summer Time.



After April 2nd we shall have an extra hour of daylight in the evening. The Government proposes introducing summer time (advancing the clock one hour) at midnight on Saturday-Sunday, April 2-3, to last until midnight on Sunday-Monday, October 2-3. Summer time in France will begin on the night of March 12-13.

Easter Events in the North.

A.C.U. Centres in the North have, between them, evolved a very full programme for Easter. On Saturday, March 19th the North-western Centre have an open hill-climb, organised by the Stockport M.C.C.; on Good Friday there is the Richmond meet; on the 27th the North-Western Centre is holding a rally at Ribchester; and on Easter Monday the Westmorland M.C.C.'s open hill-climb takes place on Orton Scar.

Scottish Six Days Trial.

July 4th to 9th is the time fixed for the 1921 Scottish Trials; no further particulars are available at the moment, but intending competitors should register their names for entry forms with the secretary of the Edinburgh and District M.C. (Mr. Campbell McGregor) at 6, Castle Terrace, Edinburgh. Mr. McGregor, who will organise the event, is to be assisted by a committee composed largely of Scottish motor cyclists who have previously played a part in the organisation of the trial. We have no doubt, therefore, that the event will maintain its standard of excellence. It will be recalled that last year the Scottish Six Days was organised by Mr. L. Cunningham and Mr. A. D. Aikman Smith.

ON THE PARIS-NICE TRIAL.

One of the Morgans *en route* for the South. This familiar view in Fontainebleau shows the Palace, the scene of many historic incidents.

Price Reductions.

Although there is no general tendency towards a drop in prices, there are one or two exceptions. Amongst these are the A.B.C., which is now being offered at £120 with an additional £38 for the sidecar, the Cedos at 62 guineas, and the 4½ h.p. Quadrant outfit at £125.

The First Sidecar.

Following our recent article on the first sidecar, giving credit to Mr. W. J. Graham, of Enfield, we have received an interesting letter from Mr. W. H. Fulford, of the well-known Millford sidecar firm. This gentleman advises us that the original patent of Mr. Graham was opposed by Mills, Fulford, Ltd., as they were able to produce evidence showing that they had made a sidecar previous to the date of the application of the patent. In 1903 the Millford sidecar was launched upon the market. A patent was finally granted to Mr. Graham, however, but for some reason it was allowed to lapse.

The T.T. Races.

Seventy-three entries have been received to date—forty-two for the Senior T.T. and thirty-one for the Junior race. Lists will be found on page 266.

New Sidecars.

Several new sidecars and an experimental cycle car made by the makers of a well-known motor cycle are described in this issue.

Records.

Another single-cylinder broke a record last week. When will the twin exponents start again?

Six Drops a Minute.

This week we have heard of the case of a motor cyclist who was sure he was not under-lubricating his two-stroke engine. He was giving it *quite six drops a minute.*

Douglas Speed Trials After the T.T.

The Manx Motor Cycle Club proposes holding speed trials on the Douglas promenade on the Friday after the T.T. races—that is, on June 17th. Similar trials were held last year, and were much appreciated.

The Colmore Cup Trial.

At 8 a.m. on Saturday next the first of the competitors in the Colmore Cup trial will start from the Stonebridge Hotel, Meriden. This year the event is open only to members of clubs affiliated to the Midland Centre A.C.U.

Foreign Competition.

It does not necessarily follow that if a foreign industry can undersell a British industry in the British market, the rate of exchange can be held entirely responsible, says *Motor Transport*. It may be that its industry is better organised, that its workers are putting their backs into it while ours are slacking, or that it produces on a larger scale, rendering cheaper production possible. All the circumstances have to be carefully analysed before one can say just to what extent it is the abnormal rate of exchange that is at the bottom of the trouble.

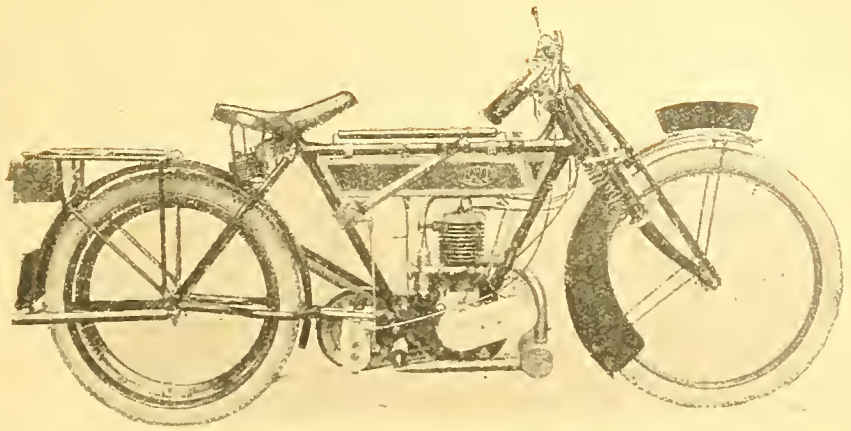
M.C.C. LONDON-LAND'S END REGULATIONS.

FOLLOWING on our leader in *The Motor Cycle* of February 24th, in which we commented on the severe conditions of the London-Land's End Trial, especially on the point that no allowance had been made for low-powered machines, the following telegram has been received:

"YOUR CRITICISM LAND'S END UNJUSTIFIED. JUST CLIMBED PORLOCK, THREE MILES FROM SHIP INN, SEVEN MINUTES; AVERAGE SPEED TO TOP OF LYNTON 27 M.P.H. ROADS WET, BUT IN GOOD CONDITION.—*Wells, Captain, Motor Cycling Club.*".

This wire is interesting, but the matter requires further elucidation, and the following questions require answers:

(1.) What machine was Mr. Wells riding?

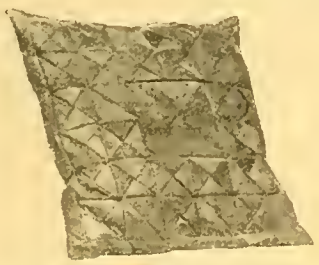


(2.) Did he encounter much traffic?

(3.) Does he consider that there is no chance of baulking with over one hundred competitors moving at short intervals?

Perhaps Mr. Wells can answer these questions satisfactorily, and we feel sure this must be the case, since an organisation with the reputation of the Motor Cycling Club is hardly likely to jeopardise its standing by maintaining regulations which are either dangerous or unfair to any class of competitor. Nevertheless, it must be remembered that a trip over such a section, in normal circumstances, with a high-powered car or motor cycle, is a very different thing from a trip on a low-powered machine, with a good chance of being baulked by stalled competitors or char-à-banc traffic.

A NEW MODEL LEVIS.

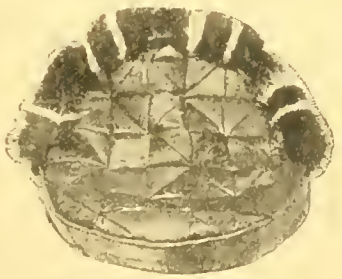


RIDERS of Levis lightweights have frequently urged that the makers should introduce a gear box model, and after a considerable amount of experimenting since the last T.T. and Six Days Trials, the firm have at last decided to introduce a new model, which will be known as the Model S. Following the general lines of the 2¼ h.p. Popular Levis, the frame is practically identical, but a Sturmey-Archer two-speed gear box incorporating a handle-bar controlled clutch is fitted. The transmission from engine to gear box is by chain, enclosed in a neat chain cover, an extension of which protects a portion of the belt. It will be noticed that the special Sturmey box without kick-starter is used.

A new two-speed 2¼ h.p. Levis with hand clutch. No kick-starter is fitted.

LEATHER SPECIALITIES FOR SIDECARS.

SIDECAR passengers are becoming more and more exacting in their demands regarding comfort and convenience. Makeshifts of any kind are no longer tolerated, and quite a common view is that on an outfit costing around £200, a discarded cushion, originally made as a drawing-room ornament, is not quite in keeping with the rest of the machine.



A crazy leather cushion, the Spikar, made in a variety of sizes and colours.

Further, every sidecar passenger knows that if such cushions are left in the sidecar overnight, they become damp—and they are left in the sidecar, pushed away out of sight, because their appearance is too bedraggled to permit of their being carried from the vehicle to hotel or to the private house.

For these reasons, there has been an opening for some time for cushions designed for the purpose, and in this direction the specialities of Messrs. Spicers, of Leamington, are making a strong appeal to all who see them at Libertys, London; Finnigans, Manchester; Vean and Scott, Birmingham; and other large houses displaying them.

Handsome and Durable.

The Spikar crazy leather cushion illustrated, which, by the way, is patented, can be described as a by-product of the glove factory of its makers. It is constructed of triangular pieces of glove leather of various colours and presents an appearance which at once suggests durability and utility. Selling at the low price of 35s., it is intended for the sidecar, car, boat, or house.

Spikar crazy leather foot-muff.

Messrs. Spicer also manufacture cushions in tan and suède, etc., for 50s. for the 24in. size, and 63s. round. Other specialities include warmly-padded foot muffs and "Tammies," both in the crazy series.

THE PARIS-MADRID TRIAL.

ALTHOUGH we have dealt with the question of Continental competitions very thoroughly in *The Motor Cycle*, and we have clearly pointed out to our readers that there are two—the Grand Prix and the International Six Days—pre-eminently more important than all the rest, there is little doubt that the Paris-Madrid trial will prove a distinct attraction to certain English competitors, as it is the first time that a motor cycle trial has been held between these two cities.

We recently had a visit from M. A. Polack, the chairman of the Sporting Moto-Club of France, which, as its title denotes, is a small but select motor cycle club recently founded in Paris to encourage the sport of motor cycling. M. Polack, who is well known to English riders who have previously taken part in Continental competitions, gave us interesting information concerning the Paris-Madrid event, and informed us that it is now officially recognised by the Union Motocycliste de France. He assured us that the organisation was to be of the very best, and that already an enormous amount of work had been put into the event. The organisers consist of representatives of *Moto-Revue*, *L'Auto*, the Sporting Moto-Club, the Automobile Club de l'Ouest, the Bordeaux Motor Cycle Club, and, when the frontier is crossed, the Royal Spanish Motor Cycle Club.

Reception in Spain.

This latter body has, we are informed, taken up the trial with enthusiasm, and will arrange for a cup to be presented by the King of Spain, who, it is said, will also receive the competitors at the conclusion of the trial.

There will also be a speed trial and hill-climb on arrival. It is anticipated that entrants will be entitled to purchase tickets from Madrid to Paris for the return journey at a 50% reduction; and, when questioned about the cost of the trip, M. Polack estimated that this would be well under £40. Four motor cycles to be ridden by British riders will be entered by B.S.A. Cycles, Ltd.

A SHOW OF SECOND-HAND MOTOR CYCLES.

A show of second-hand motor cycles, motor cars, and industrial vehicles will be held at the Crystal Palace from April 4th to 16th, and will be organised as an exchange for the disposal of these vehicles belonging to private motorists and users.

Each motor cycle shown will have a certificate of its condition signed by an expert so that prospective purchasers can gain an idea of the state of the machine. The motor cycles will be examined by Mr. Rex Mundy. The entry fee of 60s. for a motor cycle and 100s. for a sidecar outfit includes the publication of specification, expert examination certificate, insurance against fire, and the polishing of the exhibit during the show. The organiser is Mr. William Glass, of Walter House, Bedford Street, Strand, W.C.2, who organised a similar show in 1916.

Organisation Much Better than Last Year. Sixty-six Competitors Complete the Course. Eight British Survivors.

THE run from Paris to the shores of the Mediterranean is one which many motor cyclists dream of undertaking at some time or another, and as a large number are timorous of touring alone in a foreign country, such trials as the Paris-Nice should make a strong appeal to riders in this country.

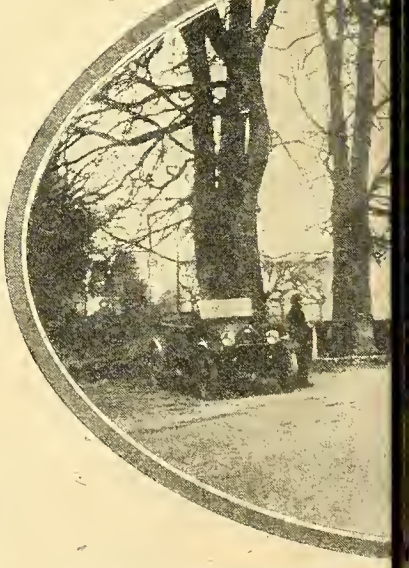
Last year's fiasco, however, caused many who might have taken the trip to defer the pleasure until the organisers had regained some of the reputation lost in 1920, while manufacturers, who view such trials only from the demonstration and publicity standpoint, naturally did not consider the trial seriously.

British Representatives.

It will be recalled that, owing to a breakdown in the organisation in 1920, the whole of the results were "washed out," and no awards were made. For this to happen in a small local event would not be a very serious matter; but to learn, after spending perhaps £60 in entry fees and expenses, that no awards would be made was sufficient to induce vows never to enter a Paris-Nice again.

Fourteen English riders started in the competition. With the exception of Mundy and Pullin on the French-built De Marçays, and Temple on the Indian sidecar, they all had British mounts. The English motor cycle industry was not confined to the machines handled by British riders, for several makes, among them Norton, Rudge, Triumph, and Matchless, were in the hands of French riders. Several machines which might normally be considered as British have also become French by reason of their construction in France. These are the A.B.C., the G.N., and the Morgan. It was reported that the G.N.'s were over weight, but if this was the case it did not prevent the machines being given an official start. The three French-built Morgans were a very smart team. All three machines had the M.A.G. water-cooled engine, and while two of them were of the Grand Prix de luxe type, one had standard finish.

An outstanding feature of the entry was the number of cycle cars all of French make, including several G.N.'s and Morgans. It was the first important competition to be held in France this year, and for this reason



attracted a considerable amou interest.

As on previous occasions, the v of Montgeron, about ten miles south of Paris, on the main ro the Riviera, was selected for the start, in order to avoid the inco

Two British competitors in a typical French street. A. Ellison and Kaye Don, who both rode Zeniths.

With the Paris-Nice Competitors

French and British Motor Cyclists cross France to the Mediterranean.

Ideal Weather Conditions, but Bad Roads.

of the crowded suburbs of Paris. at this point that the start was at six o'clock on the morning of ry 21st to the first pair of the nine competitors, the others sent away in pairs at intervals minute. Dawn had just broken as the start was made, and the weather, although cold, gave excellent promises, which were justified within a couple of hours, for beautiful sunshine prevailed throughout the day.

All the competitors had been weighed and examined on the previous Saturday at the laboratory of the Automobile Club of France, and the formality at the start merely consisted in verifying the seals. The eighty-nine competitors were divided in ten different classes, the numbers in each being as follows: 250 c.c. solo, 13; 350 c.c. solo, 10; 500 c.c. solo, 19; 750 c.c. solo, 10; 1,000 c.c. solo, 1; 500 c.c. sidecars, 2; 750 c.c. sidecars, 2; 1,000 c.c. sidecars, 16; 750 c.c. cycle cars, 1; 1,100 c.c. cycle cars, 15.

Road conditions, although not perfect, were very much better than a year ago, and the first stage, which consisted of a run of 187 miles through Fontainebleau, Auxerre, and Avallon to Dijon, in the heart of the Burgundy wine region, was over roads varying from fair to excellent.

The first control was at Fontainebleau, twenty-five miles from the starting point, where all checked in on time with the exception of Lehmann on the 250 c.c. Alcyon and Leymarie on the 1,000 c.c. Matchless sidecar. The checkers had closed their office when this latter rider came through, and although he was naturally penalised the maximum number of points, he continued in pursuit of the main group. The Alcyon rider was merely penalised for late arrival.

Improved Organisation.

The organisation, judged on the first day, appeared to be very much better than a year ago. For the convenience of the competitors, a lorry followed in the wake of the procession carrying personal baggage which was delivered to its owners at the end of each day. It was most important that a close watch should be kept on the checking stations, and that the times of arrival should be taken with great accuracy. In order to assure this, an official timer of the Union Motocycliste de France followed on a fast six-cylinder Delage—a car with such a turn of speed that it was possible to wait at a control until the closing hour, secure the official time sheets, and arrive at the next checking point with the initial group. In this way it was possible to have all the official figures

his road is as popular with French motor ds are with Londoners.

One of the latest Bedelias, a make fairly familiar in this country seven or eight years ago. This machine took part in the Paris-Nice Trial.

With the Paris-Nice Competitors.—

in hand at the end of the day, and immediately to detect any laxity on the part of the local controllers.

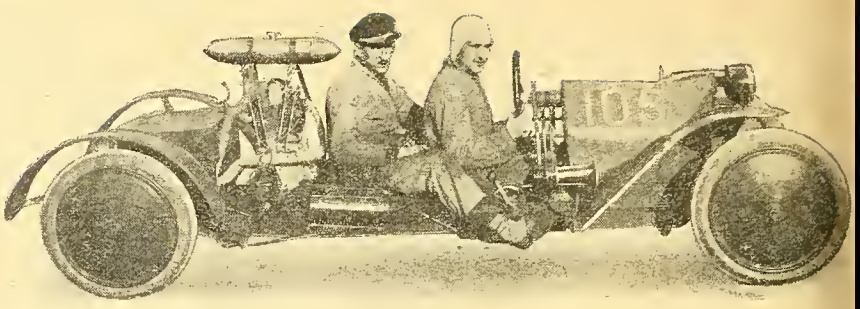
At least one of the British competitors had a run of bad luck on the second day. This was W. Brandish, jun. (5-6 Rover), who was pursued by consistent and illusive tyre troubles. He used no fewer than three spare tubes in his back wheel, all being incapable of holding air for any length of time; and, on close examination afterwards, proved to be perforated by tiny pin-holes.

After a welcome rest at Lyons, seventy-six competitors left for Avignon, the only absentee being Bonnard (Harley-Davidson), who had had an accident at St. Chamond. The start provided a scene of great animation, and all were got away to time. Borgotti (A.B.C.) and Pessé (Fournier), however, stopped to tinker a few yards out of the control.

After a day of exceptional weather and equally villainous roads, sixty-nine checked in at Avignon. Tyre troubles were prevalent throughout the day, particularly in the neighbourhood of Valence. On arrival, there was the usual reception at the Palace Theatre.

The following is a list of those who have arrived at the end of the journey:

CLASS 1.—250 c.c.



Colombel (Radco).	Berger (Velocette).
Girard (Radco).	Lehmann (Alycon).
Pierre (D.F.R.).	Clech (Motosolo).
Denley (Velocette).	Price (Diamond).
Humphreys (Velocette).	Sexé (S.C.).

CLASS 2.—350 c.c.

Dubost (D.F.R.).	Bauer (Yvel).
Boulangier (D.F.R.).	Sarradet (Yvel).
Walker (Edmund).	Péan (Peugeot).

CLASS 3.—500 c.c.

Bastide (Norton).	Douverne (Rudge).
Barthelemy (Norton).	Dard (Norton).
Lazerge (Norton).	Le Bris (Blériot).
Mass (A.B.C.).	Contant (Blériot).
Borgotti (A.B.C.).	Brunet (Blériot).
Detruche (A.B.C.).	Gabriel (Triumph).
Smetts (A.B.C.).	Lapallud (Motosacoche).
Bernard (A.B.C.).	Robert (Motosacoche).
Rolly Connet (A.B.C.).	

The reader may judge whether this cycle car, which entered for the Paris-Nice Trial, is appropriately named or not. It is called the Elfe. There is not much of the "imaginary spirit," however, about it. Note the exhaust pipe at the back of the rear passenger.

CLASS 4.—750 c.c.

Foulhoux (Sarolea).	Jacquin (Griffon).
Lefevre (Sarolea).	Pinney (Triumph).
Rivet (Sarolea).	G. Uren (Triumph).
Ellison (Zenith).	Sollet (Rover).
Kaye Don (Zenith).	

CLASS 7.—750 c.c. (Sidecars).

L. Psalty (Rover).	Lacour (G.L.).
Bourry (Griffon).	

CLASS 9.—1,000 c.c. (Sidecars).

G. Arnaud (Indian).	Walbrou (Harley-Davidson).
Vache (Indian).	G. Fenton (A.J.S.).
Berthe (Indian).	P. W. White (Sunbeam)
Verpault (Harley-Davidson).	Hughues (Ferera).
J. Psalty (Harley-Davidson).	Temple (Indian).
	Collet (Harley-Davidson).

CLASS 11.—1,100 c.c. (Sidecars).

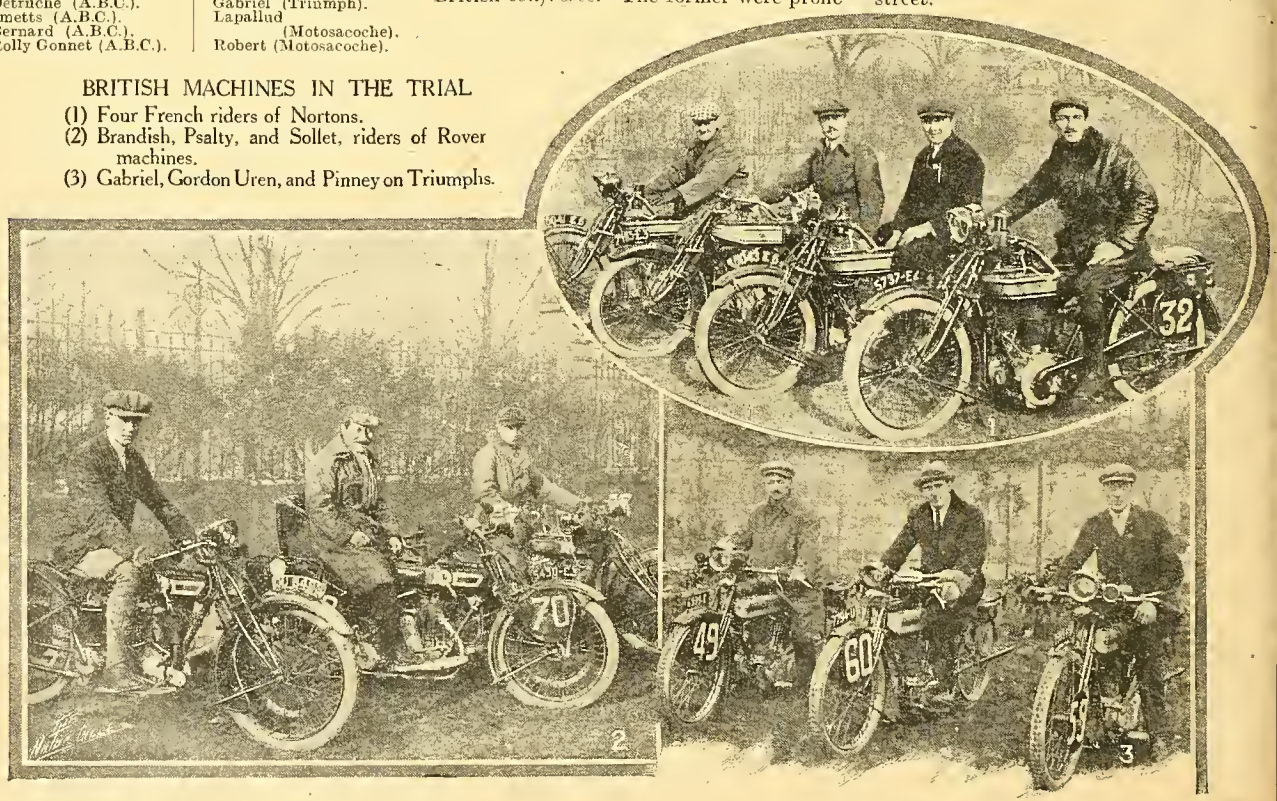
Mauve (Elfe).	Honel (G.N.).
Mundy (de Marcay).	Ramon Buene (G.N.).
Pullin (de Marcay).	Casse (Morgan).
Benoist (de Marcay).	Sandford (Morgan).
Lombard (G.N.).	Darmont (Morgan).

INCIDENTALLY.

The flurried excitement of some of the French competitors in starting was specially noticeable in comparison with the cool and dignified manner of their British *confrères*. The former were prone to shout, and roar their engines unmercifully; and at the word to go dashed off after the fashion of competitors at a speed test.

The word to go, "*Partez*," became very popular among the humorously-inclined competitors.

The roads as far as St. Etienne were moderately good, but onwards to Lyons they were badly knocked about.



Weather conditions were very good, the sun shining brightly most of the time.

Denley and the other two Velocette riders were going strong when we saw them near Lyons.

Borgotti (A.B.C.) had a collision with a cart in Lyons; Colombel (Radco) also fell in avoiding a child in a village street.

BRITISH MACHINES IN THE TRIAL

(1) Four French riders of Nortons.
(2) Brandish, Psalty, and Sollet, riders of Rover machines.
(3) Gabriel, Gordon Uren, and Pinney on Triumphs.

With the Paris-Nice Competitors.—

The French Blériot machines appeared to be much improved since last year.

Rex Mundy (de Marcay cycle car) lost his way going into Lyons.

Triumph, Diamond, A.J.S., Zenith, and the Sarolea competitors were all riding consistently well.

All the G.N. cycle cars arrived at Lyons—the only team to complete the first section of the trial with full marks.

The driver of the Major cycle car was disqualified for obtaining the assistance of a blacksmith outside Chagny.

The following unlucky thirteen were disqualified at Lyons, most of them through being late :

Lézin (S.C.), Poulet (Cleveland), Pouget (Cycle Motor), Moret (M.C.), Vernisse (Yvels), Pernette (Yvels), Lessmann (Pengeot), Veringa (A.B.C.), Brandish (Rover), Delannay (Stucchi), Maurer (Griffon cycle car), Mourre (Major cycle car), and Pessé (Fournier cycle car).

Norton motor cycles were showing up well.

Psalty (3½ Rover sc.) tried conclusions with an American lorry and sustained damage to his sidecar mudguard.

At the end of the first day, the ranks had been thinned by penalisation as follows :

Girard (Radco), Lézin (S.C.), Poulet (Cleveland), Trouche (Cycle Motor), Moret (M.C.), Vernisse (Yvels), Pernette (Yvels), Chapnaz (Excelsior), Sutter (American X), Ricoux (Chaudron), Bourbeau (Bedelia), and Maurer (Griffon).

The following were fined twenty francs each :

Brunet (Blériot), Gabriel (Triumph), Robert (Motosacoche), and Uren (Triumph).

Prices of Second-hand Motor Cycles.

A Schedule of Prices at which used and shop-soiled Motor Cycles were being offered in the miscellaneous advertisements of last week's issue of "The Motor Cycle."

CLUB NEWS.

The Park M.C.C. (Glasgow).

A new Scottish club has recently been formed with the above title. Cycle car owners are especially invited to join. The secretary *pro tem.* is Mr. J. M. Grant, 9, Oakfield Terrace, Hillhead, Glasgow.

East Midland Centre A.C.U.

The annual meeting of this centre was held in Nottingham on the 19th ult. It was decided to delegate the organisation of the three open events as follows: March 28th, open speed trial, to the Lincolnshire Club; May 28th, hill-climb, to Derby Club; July 23rd, speed trial, to the Loughborough Club. The suggestion of Mr. R. Green (North Derbyshire), that in the event for the centre trophy the teams be composed of non-experts according to A.C.U. definition, was heartily approved. Messrs. K. S. Topping and Wheldon were elected to be A.C.U. representatives. Officers for this year were elected at this meeting as follows: President, Mr. Wheldon (Nottingham); chairman, Mr. W. B. Myhill (Ilkeston); vice-chairmen, Messrs. Lowther (Mansfield) and Whaley (Nottingham); treasurer, Mr. R. B. Green (North Derbyshire); auditors, Messrs. J. R. Sylvester (Nottingham) and L. Farmer (Derby); hon. sec., Mr. K. S. Topping, whose address is 64, Frederick Street, Loughborough.

MOTOR CYCLE EVENTS AT BROOKLANDS.

Sat., April 16.—B.M.C.R.C. (Members).
Sat., May 7.—B.M.C.R.C. (Open).
Sat., May 21.—B.M.C.R.C. (Members).
Sat., July 2.—B.M.C.R.C. (Members).
Sat., July 29.—B.M.C.R.C. (Members).
Sat., Aug. 6.—B.M.C.R.C. (Open).
Sat., Aug. 27.—B.M.C.R.C. (Members).
Sat., Sept. 17.—B.M.C.R.C. (Members).
Sat., Oct. 8.—B.M.C.R.C. (Members).

Kidderminster M.C.C.

There will be a social run to Ludlow on March 19th, the start being from the Lion Hotel at 2 p.m. Arrangements are being made for tea at Ludlow. This being the opening event of the season, it is hoped that every member will endeavour to attend.

The Motor Cycling Club.

The Motor Cycling Club has an excellent and well-established custom of holding a dinner annually for past and present members of its committees. That held on the evening of February 23rd was a particularly enjoyable one, as the entertainment arranged by Mr. E. A. Bridgeman was one of the best experienced so far, since such well-known artists as George Mozart, Sam Mayo, Whit Cunliffe, and Wilkie Bard were among the star turns.

Club News—

East Lancashire M.C.C.

At the annual dinner in connection with the East Lancashire M.C.C. on February 17th, Mr. H. Reed said there was every promise of arrangements being made for the holding of a speed trial on the Southport Promenade on July 2nd.

Stockport and District M.C.C.

A hill-climb will be held by the Stockport and District M.C.C. at Axe Edge, Buxton, on the 19th inst. Many special prizes are being offered and the entry fees are to be reasonable. Particulars can be obtained from Mr. E. S. Abram, 226, Manchester Road, Heaton Chapel, Stockport.

Accrington and District M.C.C.

Only formed in February, this club already has forty members. It is intended to cater mainly for the sporting side of the movement, but social runs and social evenings will also find a place on the programme. Mr. W. Bancroft, Turfcote, Whalley Road, Accrington, is the hon. secretary.

Manchester M.C.

At the annual general meeting of the Manchester Motor Club, held at the Crown Hotel, the reports of the hon. secretary and treasurer on the past year's work were read, and the officers and committee for 1921 elected. A very attractive programme has been arranged for the coming year.

The club is desirous of increasing its membership roll, and prospective members should write at once for particulars and the necessary form to the hon. sec., Mr. F. Gunton, 8, Brailsford Road, Fallowfield.

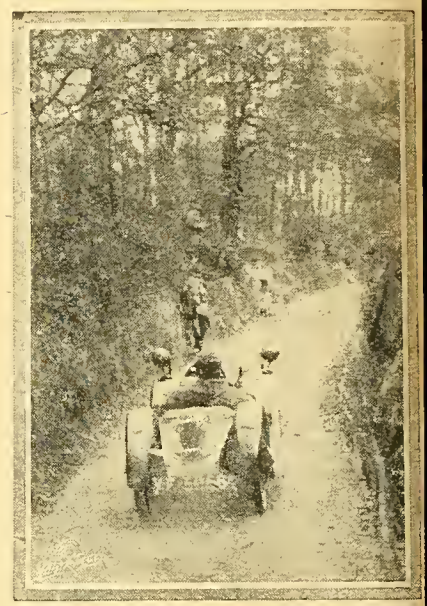
Lincolnshire M.C.C.

The Lincs. Motor Cycle Club will hold an open speed trial, under licence granted by A.C.U., in Grimsthorpe Park, near Bourne, on Easter Monday, 28th inst. The course will be half a mile in length with flying and standing starts for all classes of motor cycles and motor cycles and sidecars. Application for particulars and entry forms, which will be ready shortly, should be made to the hon. sports secretary, Mr. J. H. Robson, 33, Rasen Lane, Lincoln.

Ealing and District M.C.C.

The Longman Cup Trial is being organised by the Ealing and District M.C.C. next Saturday, 5th inst., starting from The Anchor, Ripley, at 2.15 p.m., and consisting of a run through the Surrey lanes of approximately fifty miles. No route cards will be issued, but the course will be carefully arrowed. The winner of the cup will be decided on reliability, stopping, and re-starting on a gradient, brake test, and hill-climbing. A gold medal will be given as a second award, and bronze medals to all members making a non-stop run.

Forthcoming Club Events.



Mar. 5.—Ealing and District M.C.C. Longman Cup Trial.
Mar 5.—Dewsbury and District M.C.C. Competition.
Mar. 6.—Brighton and Hove M.C.C. Social Run.
Mar. 10.—Brighton and Hove M.C.C. Reliability Trial.
Mar. 12.—Bristol M.C.C. Speed Trials.
Mar. 12.—Motor Cycling Club. Opening Run to Brighton.
Mar. 12.—Dewsbury and District M.C.C. Competition.
Mar. 12.—Coventry and Warwickshire M.C.C. Paperchase.

Western Centre A.C.U.

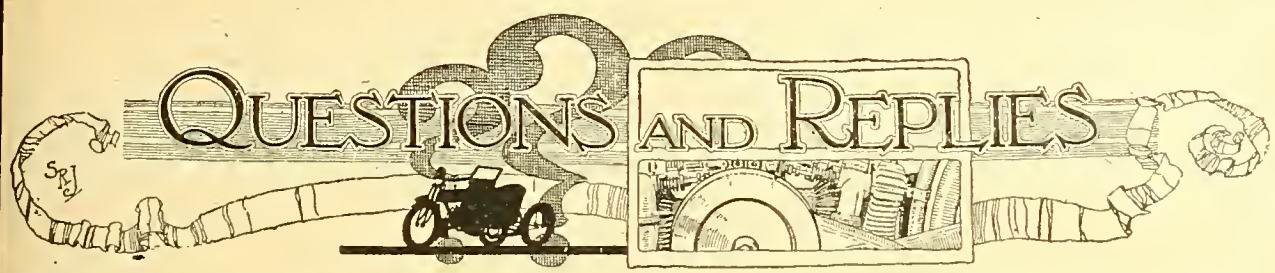
The fourth board meeting of the Western Centre was held at Bath on the 9th ult. There were twenty-one items on the agenda, the chief item being the two-day trial to be held April 8th and 9th. It was pointed out that whilst the centre regrets that the Manufacturers' Union has not seen fit to support the trial, it finds that, under the circumstances, no alteration can be made. Arrangements for the event having progressed so far the centre feels that it must proceed. The event will therefore be a two-day trial, and centre and club secretaries are being approached to give the trial every support possible by entering teams and riders.

Members of the Brighton and Hove M.C.C., who took part in a procession organised to advertise a club dance. Note the Klaxon substitute on the machine.

ESSEX M.C. ONE DAY TRIAL.
R. C. Empson (A.V.) in the slow hill-climb.

Essex M.C.

Described in last week's issue of *The Motor Cycle*, the Essex M.C. One-day Trial resulted as follows :



SILVER CUP (for best performance).—H. Le Vack (4 Indian Scout), G. M. Greening (3½ 2-cyl. Sunbeam), and L. Beadle (Waverley car).

SILVER MEDALS.—B. Morris (2¾ Coulson B), S. M. Greening (3½ 2-cyl. Sunbeam), H. Le Vack (4 Indian Scout), C. W. Bairstow (7-9 Indian), and E. B. Ware (8 Morgan).

BRONZE MEDALS.—A. A. Prestwich (2¾ New Imp), B. Roberts (2¾ Douglas), H. Harveyson (4 Indian Scout), F. Roberts (3 A.B.C.), A. C. Rhodes (3½ N.U.T.), H. S. Powell (3 A.B.C.), A. G. Martin (4 Triumph), C. Elliott (4 Indian Scout), E. J. Anderson (3¾ Scott), S. Biss (8 Zenith sc.), D. S Parsons (8 Matchless sc.), E. A. Edwards (6 Enfield sc.), and E. A. Bridgman (7-9 Indian sc.).

Glasgow Western M.C.C.

The annual general meeting was held on the 18th ult., when some sixty members assembled under the chairmanship of the president, Mr. W. N. Simpson. The treasurer's report showed the club to be in a flourishing financial condition, the cash balance being £109. The secretary's report was a most interesting one, and gave a *résumé* of the year's activities, showing that the club had had a very active and successful season. The membership had steadily increased and was now close on 200. Officials for 1921 were elected as follows : President, Mr. W. N. Simpson ; vice-president, Mr. J. Barclay ; captain, Mr. M. J. Fraser ; vice-captain, Mr. A. J. C. Lindsay ; hon. secretary, Mr. J. Robinson, 1, Yarrow Gardens, North Kelvinside, Glasgow ; hon. treasurer, Mr. A. Crosbie Watson ; hon. press secretary, Mr. F. Manning ; general committee, Messrs. D. S. Alexander, Jas. Bell, W. Deans, A. Graham, J. Littlewood, F. Miller, J. Mackenzie, M. Simons, J. W. Walker, and E. Napier White.

A selection of questions of general interest from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

TIMING AN OLD FLAT TWIN.

Having broken the crankshaft of my 1911 a.i.v. Douglas, I am at a loss to know how to time the valves. Am I right in saying that when the exhaust valve on the back cylinder just closes, the valve on the front should commence to open? Should the spark be timed from the back cylinder, the same as on a single-cylinder engine?—S.W.

The exhaust valve should close when the piston reaches top dead centre. This is the same for both cylinders; but in your engine the crankshaft should be rotated one revolution after the front exhaust valve has closed before timing the back exhaust valve. The spark should be timed so that it occurs on top dead centre, with the control two-thirds retarded. Time for one cylinder only, and lead the other wire to the opposite one, since the timing will be automatically correct for both.

OIL ON BELT, CALCULATING H.P., ETC.

(1.) I have a 4 h.p. machine fitted with an old pattern countershaft gear box, and the belt is always covered with a thick coat of oil. I cannot trace where it is coming from. Can you suggest, or definitely state the cause of this trouble? (2.) On the same machine I have a B. and B. top feed carburetter. I can run well up to half throttle, but after that the more I open out the less becomes my power. I have tried smaller jets, but the trouble still remains. It will take full air with throttle only slightly open. (3.) I should be glad to know the method of calculating horse-power by bore and stroke, etc. (4.) Do you think a gear 8 to 1 low enough for a 3½ h.p. sidecar outfit to take hills met with on the average roads in this country?—G.R.

(1.) The oil on the belt no doubt is due to a leakage from the gear box. Probably a felt or leather washer is required behind the bearing of the pulley-shaft, or, if the bearing is much worn it may need rebushing. (2.) Try the effect of raising the needle, which hangs from the centre of the throttle barrel, about ⅛in. The jet size should be .045. (3.) Find the cubic capacity of the engine by this formula: $D^2 \times .7854 \times S \times N$. Where D = diameter of cylinder in centimetres, S = length of stroke in centimetres, and N = number of cylinders. Then allow 1 h.p. for each hundred c.c. capacity. This will give you the approximate brake-horse-power of the engine. (4.) On ordinary undulating roads a low gear of 8 to 1 is fairly satisfactory, but it is rather high if steep hills are encountered.

FITTING LARGE ENGINE TO LIGHT FRAME.

I have a 2 h.p. lightweight, which is in practically new condition. I should be obliged if you would tell me whether you think it practicable for solo work to replace the present engine with a 2¾ h.p. or 3½ h.p. unit. The cycle has an Armstrong three-speed hub in the back wheel.—R.H.

The frame of your machine was very lightly constructed to suit the 2 h.p. engine, and we should strongly advise you not to attempt the fitting of any larger power unit; in fact, the 3½ h.p. would be quite out of the question. A two-stroke engine of the same capacity as the original power unit would give greater power without dangerously increasing the stresses on the frame.

Important Dates.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

WORN BIG END.

After less than five hundred miles' running my 2¾ h.p. four-stroke lightweight developed a very bad and noisy rattle or clatter—so noisy, in fact, as nearly to drown the sound of the exhaust, which is by no means silent. Where and how does this clatter arise? When the machine is doing good work, *e.g.*, climbing a decent hill, it is scarcely noticeable, but on the level, with little resistance, it is very painful. Low gear accentuates it enormously. I have had it examined by two motor mechanics, but neither succeeded in tracing it. When running on the stand it is scarcely noticeable. There is a considerable amount of vibration about the machine, which seems to be increased during the rattle or clatter. Is there any connection?—T.C.

The symptoms described are those of a worn big end bearing, which usually sets up a considerable amount of vibration and noise when the engine is running light and fast. Consult a repairer before using the machine again.

WORN CONTACT POINTS.

I have a nearly new magneto on my 4 h.p. single, and it has given no trouble until a few days ago, when the engine stopped without any warning. I traced the reason to the magneto, which would only spark for a few revolutions every few minutes. I took the contact breaker off and cleaned everything, including the slip-ring, and also adjusted the gap, but still with no better results. I eventually gave the magneto to an electrician, who said that, after tests, everything was O.K. internally. The only thing wrong with it, apparently, was that the platinum was worn from the points of the contact breaker. Can you tell me, please, if this is sufficient to prevent the magneto from giving even a faint spark, and if so, would it be best to send the contact breaker to the makers, or is it capable of being remedied locally? How often should the points be renewed?—A.W.W.

If the magneto has only been in use for a few months, the platinum points should not be worn away entirely, and we would suggest that you return it to the makers for inspection, as it may be that the condenser is short circuited. If you do not wish to return it, however, you would be able to fit the new platinum points yourself if you have a magneto spanner; or, of course, you could return the contact breaker only.

A BIG SINGLE FOR SPEED WORK.

I have a 1920 5-6 h.p. Rudge which I think lacks power. The machine has done about 2,000 miles without any trouble whatever and has always been ridden solo. (1.) When practising for a speed event on a level road I could only get 50 m.p.h. (registered). Is this good enough for this type of machine? (2.) It also lacks power on hills; I can only get up a short hill of 1-7 by lowering the gear first and tightening the belt. Compression is good, and I am careful not to let tappets get slack. The timing is as it left the makers. (3.) If I advanced the timing, should I get better results? (4.) Referring to question one, would a higher speed be obtained by using a lower gear?—R.C.W.

(1.) The particular machine which you mention was not designed for high speed work; it was introduced specially as a sidecar model, and it is very creditable if you can attain a road speed of 50 m.p.h. on it under normal conditions. (2.) It should not be necessary to tighten the belt continually in order to climb hills; in all probability the belt is too long and should be shortened. In any case the machine will not climb 1 in 7 gradients on top gear unless you can take them with a rush, as the top ratio of the gear is too high for hill-climbing. You should keep up the engine revolutions when climbing, by gradually lowering the gear as the gradient increases. (3.) There should be no need to advance the standard timing of the engine, as delivered by the makers. (4.) It is quite likely that you will obtain more speed on the level by reducing the gear a little; it is a mistake to imagine the highest speeds are invariably obtained by the use of a high gear.

FLOODING CARBURETTER.

I have a Triumph carburetter on my Baby Triumph, and petrol overflows from the top of the float chamber when the machine is running. The float is not punctured, and as it does not overflow when standing I do not think the needle needs grinding in. I imagine it is the jolting that causes it to overflow. I should be much obliged if you could give me your help in remedying this.—S.B.

You do not say whether the carburetter is one of the older models with bottom feed or one of the new ones with top feed. If the former, the movement of the needle is controlled through small levers which work on pins on the lower side of the float chamber lid, and if these are worn it is quite likely that the action of the needle is not sufficiently sensitive to follow the movements of the float, especially when passing over bumpy roads. If your carburetter is of the top feed variety, you will probably effect a cure by grinding in the needle valve and also by lowering the level.

READER'S REPLY.

BLOW BACK IN DRIP FEED.

Referring to "F.H.M.Y.'s" query in the issue of December 30th, 1920, I experienced similar trouble on a 2¾ h.p. Douglas, and after several weeks traced it to a leak between the glass and metal of the drip feed. If there is no leak, it is clear that the glass part of the sight feed cannot fill with oil unless the air goes back through the same tube which supplies oil from the tank. This is hardly likely to happen, considering the pressure of the spring behind the plunger to the hand-operated oil pump. I trust the above will not be too late to be helpful.—G.W.N. (Dehiowita, Ceylon).

EXPERIENCES WANTED.

"A.W.S." (Staplehurst).—1920 Wooler. Durability, speed, and reliability.

"T.H.D." (Coventry).—Sticking exhaust valve on Triumph engines; tips for effecting permanent cure.

"A.E.T." (Keynsham).—Amac one-lever carburetter (25 jet); elimination of dead spot at 10-15 m.p.h.

RECOMMENDED ROUTES

PLUMSTEAD TO WISBECH.—H.F.B.

Plumstead, Woolwich, East Ham, Woodford, Epping, Bishop's Stortford, Newport, Chesterfield, Cambridge, St. Ives, Somersham, Chatteris, March, Wisbech.

STOURBRIDGE TO PORTMADOC.—G.A.

THE NEXT STAGE!

MOTOR CYCLISTS interested in small or large cars should read

The Autocar

Every Friday 4d.

the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

SPARKLETS

Price Reductions.

Several of the leading tyre makers announce reductions varying between 10% and 15%.

A New Liverpool Branch.

A branch of Messrs. David Moseley and Sons, Ltd., the well-known tyre manufacturers, has been opened in Liverpool at 9, Commutation Row.

New Factory for Motor Cycle Gears.

Specially planned for the production of their motor cycle gear boxes, a new works has been built at Nottingham by Messrs. Sturmey-Archer Gears, Ltd.

The Richardson Cycle Car.

The price of the Richardson cycle car and the Richardson light delivery van has been reduced to £250, which figure includes hood, horn, electric lighting set, tool-kit, and pump.

An Amalgamation.

In order to conform with the regulations of the Companies Acts, Messrs. The Rotax Motor Accessories Co., Ltd., Willesden Junction, London, N.W.10, are going into voluntary liquidation in connection with their amalgamation with Messrs. Newtons, Ltd., of Taunton.

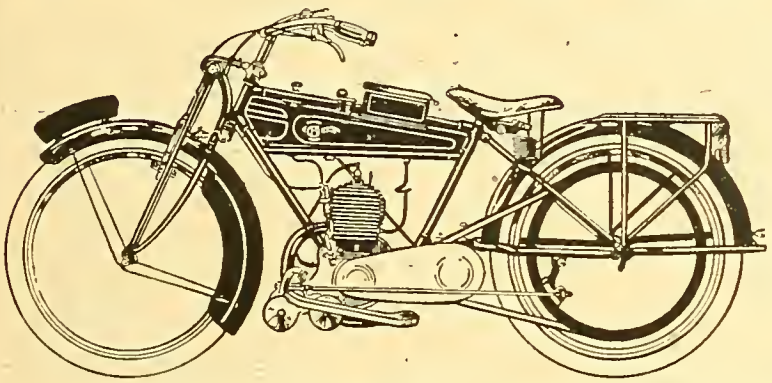
Hutchinson Boots Again.

Hutchinson Tyres inform us that they are now recommencing the manufacture of Hutchinson boots, which, as our readers are aware, are amongst the most efficient protectors for the rider's nether extremities which have been placed on the market. Unfortunately, during the war the manufacture of Hutchinson boots had to be discontinued.

Dividends from Acetylene.

The amalgamation of firms in the acetylene industry under the name of Allen-Liversidge, Ltd., of 106, Victoria Street, S.W.1, announce a final dividend for the year ended October 31st, 1920, of 7½% (less tax), making a total of 12½% for the year on the first 100,000 shares. There is also a half-year's dividend of 12½% on the remaining shares issued during 1920.

Popularity of Sidecar Taxis.



Already there are twelve sidecar taxi-cabs plying for public hire in Birmingham, and they are being well supported; they are all B.S.A.-Canoelet outfits, with the special taxi features included by the County Cycle and Motor Co., of 307-8, Broad Street, Birmingham. This firm specialises in sidecar taxis, and has submitted its demonstration outfit to the licensing authorities of Birmingham, Bradford, Brighton, and Coventry, in all of which places it has been approved. Manchester and Liverpool are considering the matter, while a service has just been inaugurated in Leeds.

HUMPHRIES AND DAWES, LTD., Hall Green, BIRMINGHAM.

A REVOLUTION IN MOTOR CYCLE LUBRICATION!

We offer you

1. PERFECT CYLINDER LUBRICATION without any interference with the existing methods of lubricating the bearings, etc.
2. 30 to 40 Thousand Miles per gallon of oil consumed, creating incidentally 25 to 50 per cent. Petrol economy, and—

last, but by no means least, a degree of flexibility and comfort to the four-stroke hitherto unobtainable.

OUR SYSTEM (Patents Prov. No. 25,685, 5,041) applies to any four-stroke engine having a vacuum valve and a discharge pipe from same.

The oil is returned to the crank case without interfering with the vacuum.

WE HAVE BEEN EXPERIMENTING FOR THREE YEARS, and during the last six months we have tested the completed system over thousands of miles of ordinary road, riding on a 2¾ h.p. Excelsior-J.A.P. and on a N.U.T. 4 h.p. twin J.A.P. We have run the 2¾ h.p. Excelsior-J.A.P. 100 miles with the ordinary oil feed completely shut off all the time. At the end of this run, we drained the oil from the crank case, thoroughly tested it, and found it as good as ever (just as you will find it in a car engine). We then took the engine completely down, and found that every part had been perfectly lubricated all the time. Whilst examining the parts of the engine, the high quality of workmanship put into the J.A.P. engine struck us very forcibly. The Excelsior and N.U.T. can be seen at any reasonable time (Saturdays and Sundays included), at our premises.

When the Apparatus is fitted on, it requires no further attention. You simply set the oil feed to about one drop per minute.

Price, fitted complete at our works, **£2 - 15 - 0** **ARE YOU INTERESTED?**

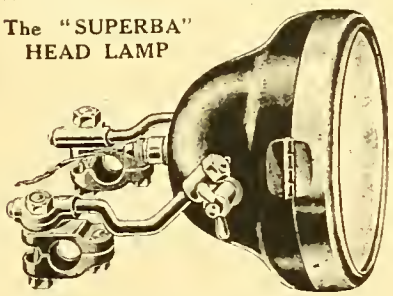
VOLEX DRY BATTERY
Motor Cycle and Sidecar
LIGHTING SETS.
BRITISH MADE.

Volex Dry Battery Lighting Sets are the Ideal no-trouble outfits. For over ten years they have been in use in Motor Cycle service, and in spite of the heavy and increasing demand we are now in a position to give prompt deliveries.

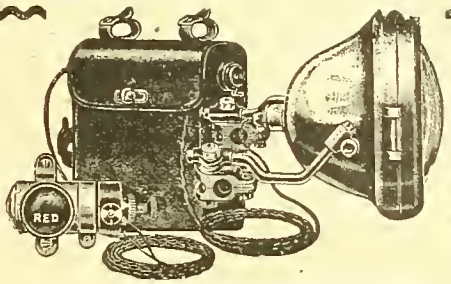
The 1921 improved model entirely eliminates that uncertainty invariably associated with accumulator and dynamo lighting outfits.

When once fitted will give 12-18 months' effective service without requiring attention.



Specification:—Two 6 volt "Volex" Dry Batteries in Metal Container, which lies conveniently in the bottom of the sidecar; Switchboard, "Superba" Head Lamp (5½" front); Ball Pattern Side and Tail Lamps; Conducting Cord; Metal Filament Bulbs As illustrated.

No. MC/490. **Price: £8 8 0.**



Fitted with "Superba de Luxe" Head Lamp (7" front). No. MC/450. **Price: £9 9 0.**

No other battery outfit will give results equal to the "Volex."

SPECIAL OFFER
OF
DOUGLAS
MOTOR CYCLES

Rebuilt as new from ex-Government machines and new parts.

Completely equipped with new accessories, including head lamp and generator, tail lamp, horn, licence holder, two toolbags, pump, and tool kit.

Douglas 2¾ h.p., 2-sp., £65

Douglas 4 h.p., 3-sp., kick-start and clutch .. £85

Douglas 4 h.p. Combination, with new body, £105

Being the largest dealers in renovated Douglas motor cycles in the trade, and having large numbers on hand for disposal, we make the above offed for a short period, to endeavour to considerably reduce our stocks.

Each machine is rebuilt in our own workshops, stove-enamelled, replated, tanks renovated in makers' colours, fitter with new magneto, carburetter, tyres, front brake, etc., and complete with full equipment as above.

Each machine is absolutely guaranteed, and in appearance is practically indistinguishable from new.

In addition to the above, we have about 100 machines at a lower figure, each one overhauled, stove-enamelled, replated, tanks in makers' colours, good serviceable tyres, fitted with toolbag, kit, and pump. Guaranteed sound, good running machines.

Douglas 2¾ h.p. 2-sp., £55

Full equipment extra.

Carriage extra in each case.

Trade Supplied.

Full particulars of Deferred Payment Terms on request.

An Open Letter.

418, Romford Road,
Forest Gate, E.7.

Dear Sir,—In respectfully submitting for your kind consideration our Stock List of new 1921 Models, we wish to state quite frankly that, so far as price is concerned, we do not claim to offer any particular inducement to you to place your order with us, as the figures quoted are the manufacturers' minimum prices for cash, and are the same as those quoted by every other reputable Agent in the Kingdom.

The principal advantage you do gain by dealing with THE EASTERN GARAGE COMPANY is an excellent selection of machines from which to make your choice, and——*SERVICE*.

Our services are gladly given from the moment we receive your enquiry, and for as long as you will avail yourself of them. Your letters are answered immediately and courteously, your wishes are carried out faithfully and capably, and if we have the pleasure of supplying your machine, you are relieved of the formalities of obtaining a Driving Licence, effecting Registration, Insurance, etc., as these matters are attended to by us. As long as the motor cycle remains in your hands, we regard it as our responsibility to see that it gives you good service.

In short, our one aim is to gain your confidence and ensure your satisfaction.

We are, Sir,
Faithfully yours,
THE EASTERN GARAGE COMPANY.

F.R.S. ACCESSORIES

The name F.R.S. is recognised — as a guarantee of highest quality and efficiency — hence the big demand for accessories bearing that name. Just examine any F.R.S. product—you'll readily note its superiority.

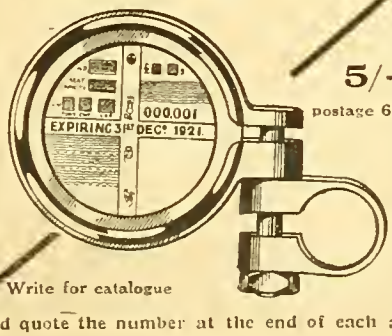
Regd. No. 679594.

Streamline Gas Set.

A perfectly made lamp of clean design and wonderful light-giving power. Embodies genuine optical Mangin mirror, adjustable focus, non-glare chimneys, patent F.R.S. One Nut attachment, and new type of door fastening. Prices: 6in set £4-4-0. 5in. set £2-15-0.

Regd. No. 679275.

Price: 22/6



F.R.S. "STRAIGHT" Horn

Gives a loud and harmonious note, and is a most effective road clearer. Embodies a special red, immovable dust-cap, and the Patent One Nut attachment. Finest smooth black and N.P. finish. There's nothing on the market to equal this, either for tone, finish, or value.

F.R.S. Licence Holder

Adjustable to ANY angle. Note the One Nut attachment. No ugly screws showing and no sharp edges projecting. Nothing to rust or shake loose. Even pressure all round the rim which holds the card, etc., making it absolutely waterproof. Supplied in all finishes.

F.R.S. LAMPS, 'Beam Works,' Vere St., BIRMINGHAM.

5/- postage 6d.

"DAYBEAM" Electric Solo Set

The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate.

Complete Outfit, List No. 30/1, Price £5 5 0
(If tail lamp is not required, deduct 12/6).

"DAYBEAM" Combination Set

The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The Accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting and will give very satisfactory service in use. Many have now been in use two or three years, and are as efficient as when first purchased. **All our Accumulators are specially made to stand vibration.** Ordinary accumulators are never satisfactory for motor cycle work. The hard wood case supplied with this set is finished ebony black, and is specially treated to withstand acid. This outfit is despatched completely assembled with bulbs and all necessary wiring, etc.

Complete Outfit, List No. 30/2, £7 7 0.

"DAYBEAM" LIGHT CAR SETS
(Particulars on request).

Westwood Special Lines are stocked by all reputable agents.

PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

Don't Scrap an old Engine,

but give it a

NEW LEASE OF LIFE

by fitting the

World-famed Philipson Pulley.

Entirely Free from troublesome and weighty complications—only two working parts — no levers, rods, wheels, etc., to worry about. Simply takes the place of the ordinary pulley. One nut secures the complete gear to the engine. Can be fitted without any alterations to most direct belt-driven engines in a few minutes.

For hill-climbing it is unsurpassed. Makes mountaineering easy.

1921 Competitions.

If the number of entries received for the 1921 open trials is any criterion, this year's competitions promise to be as well supported as any previous series of events.

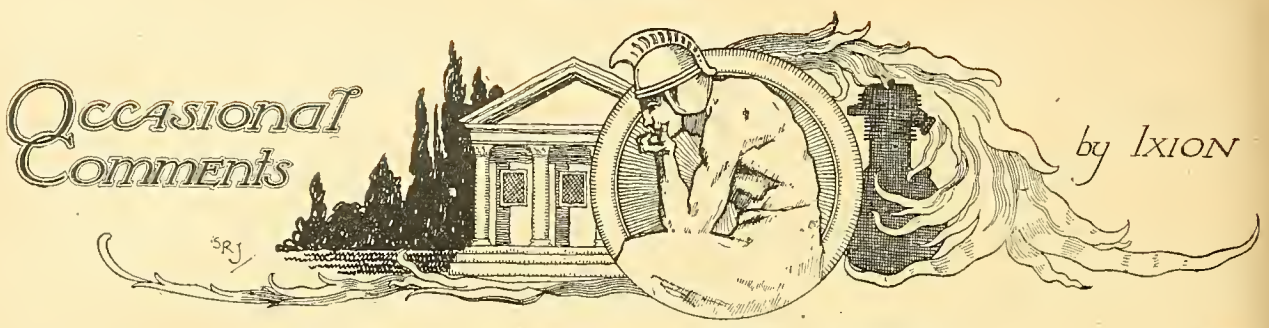
Over two hundred machines are entered for the London-Land's End trial at Easter, and last Saturday's Colmore Cup Trial attracted over a hundred and fifty entries. In view of the efforts on the part of the Manufacturers' Union and the A.C.U.—each in its own way—to limit competitions, and the fact that the two trials mentioned above are "closed" events, the support accorded them seems to indicate that "trade" support is not essential for a trial to be a success. There is a large coterie of sporting riders to whom competition riding is the essence of the pastime.

For many years there has been a feeling in the industry that trials have been overdone and that their expense has been an unnecessary tax upon the manufacturers, and for this reason agreements have been made among members of the Union relating to the number of events which should receive their support.

The Auto Cycle Union has also attempted to check multiplicity of trials by limiting the number of permits granted to clubs for open competitions. Last year the number was twenty—a number coinciding with that agreed by the Manufacturers' Union; this year the affiliated clubs have demanded a further ten permits, but so far no announcement has been made by the Manufacturers' Union as to the number of events its members will support.

An Average of One Trial per Week.

In addition to the thirty open events, this year there will be quite a large number of trials confined to members of clubs affiliated to an A.C.U. local centre. The Colmore Cup Trial was the first of these, and its success as a really big closed trial seems to suggest that the local centre scheme will have the effect of increasing the number of large trials. The fact that the Colmore Cup Trial was "closed" does not appear to have affected the entry in any way. Probably, a like number of entries would have been received had it been confined strictly to members of the organising club, as it was only necessary for a rider to become a member in order to compete, and most manufacturers are sufficiently alive to the importance of the first big trial of the year—be it closed or open—to find a way to be represented.



It is an almost Gilbertian state of affairs that the Colmore Cup Trial was not one of the series sanctioned by either the A.C.U. or the Manufacturers, and yet was supported by riders of practically every machine usually found in competitions. Since the Midland Centre A.C.U. clubs are all in districts where motor cycles are manufactured, it is only natural to expect a good sprinkling of trade riders "taking a 'busman's holiday"; but there were also many well-known trade riders from districts outside the Midland area, who, apparently, became members of one or another of the Midland clubs in order to participate in the trial. All this is perfectly legitimate, and raises comment only because it invites thought regarding the futility of attempting to classify trials.

Since there are thirty open events, this means that there is an average of at least one competition every week until the end of September, without taking into consideration the even more important Tourist Trophy Races, the A.C.U. Spring Trial, the Scottish and the International Six Days Trials, the Grand Prix, and such classic events as the M.C.C. London-Land's End, London-Edinburgh, the Team Trial, and the Anglo-Dutch Trial.

It will be seen that, instead of the number of competitions being reduced, it has considerably increased, even without counting the A.C.U. local centre events, which may assume considerable importance in certain areas.

There is no doubt that trials are more popular than ever they were, and the preponderance of private riders in these events speaks well for the sporting class riding motor cycles. The industry must benefit by this useful propaganda.

An index to the advertisements in this issue will be found on the page facing the back cover.

A Poser Solved.

THE cause of the troubles sustained by the Devon rider quoted on this page last week was that when he filled his tank, the local garage had supplied him with a gallon consisting of equal parts of petrol and water. I have never experimented with such a mixture, and am not quite clear why his engine should have worked well for half a mile on this fuel before it petered out.

My Portrait.

THE Editor has gravely considered the requests of many readers—fair and otherwise—for the publication of my portrait. If the request had been made during the war, when we were reduced to bad paper, and there was an odds-on chance that blocks would come out rather blurred, he might have considered it; but now that we can reproduce every detail clearly, he suggests that the publication of my lineaments might have a most detrimental effect on our circulation.

Portable Hand-cleansers.

SOME months ago I appealed to the soap trade to market leakproof pocket canisters of a hand-cleanser which motor cyclists could carry on their journeys. We all know what it means to reach an hotel or a friend's house with our hands in a filthy condition, and to find that household soap won't shift the grime. Similarly, after a dirty roadside job we often want to clean up, for fear of fouling our gloves, overalls, and machine, but under such circumstances neither water nor soap is available. So far the Star Sundries Co., Progress Works, Southport, are the only firm who have listened to my plaint. They produce a collapsible tube of verbena-scented semi-liquid soap, known as "303," which is intended to be used without water. My hands are not of the pudgy variety, and whilst this dope promptly produced a lily-white surface over the smooth areas, it failed to shift the black streaks and entrenched grime round my finger nails, until a brush was used to apply it. Moreover, a collapsible tube may at times collapse in one's pocket. "303" is a step in the right direction; but I want a canister which can be sat upon without risk, and if it needs the assistance of a brush, that brush should be fixed to the inner end of the stopper.

(MARCH 17th)

4d.

THE . . .

ANNUAL SPRING NUMBER

OF

THE MOTOR CYCLE

In addition to a complete Buyers' Guide giving illustrations, specifications, and prices of the motor cycles now available, this enlarged number will contain many articles of special interest to all who own or contemplate purchasing a motor cycle.

Back to Carbide.

AFTER a long spell on electric lamps I came back to carbide recently, and old memories revived as I waited in vain for the smell, after turning on the water. Thanks to a pocket torch, it was only a matter of five minutes to discover that the water valve was nicely choked with dust shaken off the waiting charge by road vibration; and the spare tin of carbide in my jacket pocket felt quite familiar, as it is necessary to carry a case of extra bulbs when one is relying on a dynamo. I must say I hanker for the cleanliness and convenience of electricity. But acetylene is so cheap and so easy to restore to working order that one can quite understand why it does not die out.

The Limit.

FOUR of us were swopping yarns round a fire. The conversation turned on our most horrifying experiences. Several good lies were contributed. At last a worn-looking sort of man with a deeply scarred face described how he approached the Marble Arch going eastwards at a good bat, and intending to turn down Park Lane. When the moment for a change of course arrived, he turned. That is to say, he turned his handle-bars sharp right. But his front wheel went straight on. Our host silently handed him the Flor di Cabbageo.

That Cunning Shutter.

MY present mount has a Cox-Atmos carburetter. Anybody who has seen the readiness of some T.T. entrants to use any old carburetter provided its makers will make it worth their while is apt to become cynical where vaporisers are concerned, and to imagine that no carburetter is much better than its rivals, and that it is the tuning which counts. But I must say I like the Cox very well. In particular, I am tickled to death by that cunning little air

Occasional Comments.—

strangler, which automatically goes out of action after you have started up. I like it all the better because I have recently used two carburetters with air stranglers which wanted putting out of action by hand.

Head Lamp Glare and Motor Cyclists.

I AM rather surprised that motor cyclists have never become audible on the question of dazzling motor car head lamps. I suppose the reason is that most of the vocal motor cyclists frequent wide roads, where it is possible to give the 1,000 c.p. 40 h.p. limousine a widish berth. *Pour moi*, I do a lot of lanework, and ride some funny 'buses, experimental and otherwise. There is nothing I hate more than to meet a dazzling pair of lamps in a greasy lane. Take two recent experiences. I was climbing a long slippery hill with a 'bus suffering from non-startitis in an acute form. The road was steeply cambered, and near the summit I met a big Rolls. I had possibly 3ft. margin between its mudguards and the ditch, and I couldn't see a thing when it got close up. Needless to say, I preferred death to (1) stopping and restarting on the grade; (2) stopping and going down again one mile, with the chance of meeting another Rolls when I rode up again. I went down into the ditch, which was shallow, and those readers who long to behold my lineaments ought to have had a flashlight of my peeved countenance as I tried to reascend the camber after the Rolls had passed. Experience No. 2 was on a clutchless baby two-stroke on a very wet night, and the venue was one of those long steep hills going west beyond Moretonhampstead across Dartmoor. Here I met a 30-98 h.p. Vauxhall coming down; I side-stepped its glare, and hit my left shoulder hard on a root projecting from the hedge as I did so. I don't fancy the appearance of my 'bus with a Grubb anti-glare attachment on its head lamp; but really I shall feel quite affectionate towards Sir Eric Geddes when he enforces these unsightly protuberances.

6,000 Miles on an A.B.C.

AN undergraduate of London University hotly contests the assertion of a correspondent that the A.B.C. is necessarily a quick-wearing engine, because of its revving powers. His own sample has done 6,000 miles, and he cannot find any bearing wear except in the valve rocker supports, although he habitually does 45 m.p.h. on third. Incidentally, he is delighted with a foot accelerator, which he has fitted, and finds his oil consumption no higher than 1,600 m.p.g., which, it must be admitted, compares favourably with considerably slower engines.

Touche!

I RECENTLY chaffed a chemical firm because it simultaneously markets two dopes with the following words:

1. "Corrosine," to prevent the formation of rust.
2. "Derusta," to remove rust when formed.

I meekly suggested it was as if an evangelist should offer us a passport to the golden gates and/or an asbestos suit for wear in the event of missing the way. The firm's managing director replies to-day:

> "Dear Ixion,—Carry a bottle of our 'Derusta,' and you can never have any possible use for an asbestos suit."

I suppose he had the whole of his staff in to work that out. I must give up chaffing these firms. The odds are too great.

ELIMINATING DANGEROUS CORNERS.

Throughout the country dangerous corners on main and secondary roads are receiving the attention of local authorities. Wherever possible they are being widened and abrupt corners cut off. These two examples of road improvement are on the Lichfield-Coleshill road.

ROAD TESTS of NEW MODELS

THE 4½ h.p. QUADRANT.—A Moderate Priced Outfit.

SPECIFICATION.		
ENGINE: 87×95 mm. (565 c.c.) four-stroke single.	*GEAR BOX: Three-speed Sturmey-Archer.*	*FORKS: Druid.*
LUBRICATION: Hand pump.		*FRAME: Rigid.*
MAGNETO: M-L.	*TRANSMISSION: Chain.*	*WEIGHT: 250 lb. solo.*
CARBURETTER: Amac or Senspray	*WHEELS: 26×2½in.*	*PRICE: £125 with sidecar.*

IN these days of "tight money" and need for economy, any machine which is capable of hard service and sells at a moderate price is worthy of very serious consideration. Consequently, we were considerably intrigued with an offer of a trial on the 4½ h.p. Quadrant and sidecar. Readers of *The Motor Cycle* will remember that the price of this sturdy outfit has been reduced to £125, which cannot be considered an excessive figure for a machine of such capabilities as will be mentioned in the following notes.

Top Gear Capabilities.

A preliminary glance round the machine showed that it was a standard outfit with the exception of the fact that a long exhaust pipe was substituted for the usual silencer. The top gear ratio proved to be 4⅞-1 with standard Sturmey-Archer reductions, and we were informed that the engine was brand new and had not yet been run in. This last factor made our test all the more severe, and, with the redoubtable Mr. Silver as our companion, we set out for the Edge Hill range with the prospect of an interesting test. One of the objects we had in mind was to test the top gear capabilities of the Quadrant, and it must be confessed that our expectations in this direction were considerably exceeded.

Sturdy Construction.

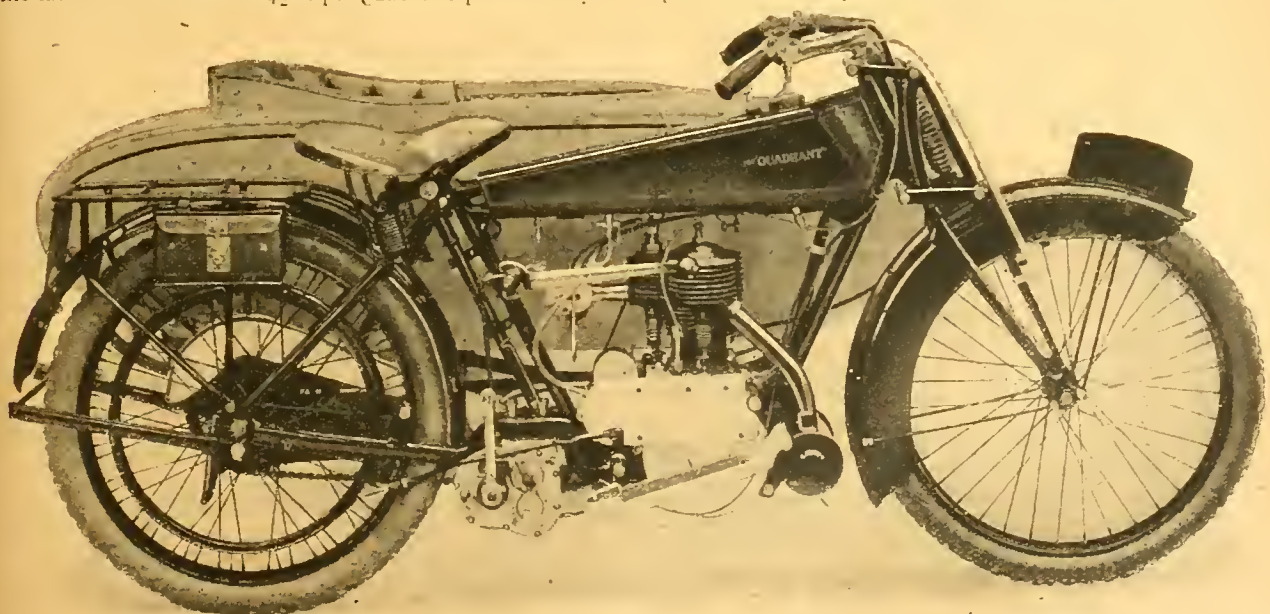
Undulating roads to Kenilworth brought forth no incident, but the vile surface between that place and Warwick proved that the sidecar was comfortable under all circumstances, and that Mr. Silver had complete confidence in the frame and chassis design, since the machine was never slowed down from its steady average speed. Incidentally, the spring fork worked freely and smoothly and never showed any symptoms of "clashing." After Wellesbourne comes the ascent of Friz Hill, a deceptive climb which forms an admirable guide to the probable performance of the machine on Edge Hill. We were pleasantly surprised when the engine towed us bravely over the crest on top gear. No mean performance with a heavy load and a 4⅞-1 ratio, especially as a full two-gallon petrol can formed part of the equipment. On we went through Kineton, and no effort was made to save the engine for the forthcoming test. On nearing the foot of Edge Hill the throttle was opened and the exhaust note changed from a pleasant burble to a healthy crack as the

Road Tests of New Models.—

machine gathered speed. As the gradient increased in severity the engine slowed down, but pulled gamely without the sign of a knock till the first right-hand corner was reached. Here a lower gear was called for, and the remainder of the climb was child's play on middle gear.

On Tysoe Hill.

The descent of Sunrising Hill was sufficient to show that the brakes were well up to their work, and, since the climb was so obviously a simple second gear ascent, we decided to push on to Tysoe Hill, a lesser known ascent on the Edge Hill range. A left-hand bend on this hill removes any possibility of a rush, especially as it is closely followed by a right-hand bend at the foot of the worst piece of the grade. Here, again, middle gear had to be used, but it is noteworthy that throughout our trip the ascent of Edge and Tysoe were the only occasions on which the machine came off top. All traffic work was negotiated on the highest ratio, and the manner in which the 4½ h.p. Quadrant pulls evenly down to the last gasp was particularly noticeable.



On the road with the Quadrant outfit.

After the ascent of Tysoe Hill it was determined to attempt a re-start on the steepest section, using middle gear, probably not quite a fair test considering the weight of passengers and outfit. This proved impossible owing only to the fact that the clutch would not take the machine away. On low the outfit started with consummate ease, and middle gear was engaged almost as soon as the machine was moving.

A Satisfactory Test.

The homeward journey *via* Stratford-on-Avon was without incident, but it was noticeable that the gruelling test which had been carried out at a high average speed had served only to run in the engine, for, despite strong head winds, its performance was noticeably better as the miles flew by.

Our conclusions are that the 4½ h.p. Quadrant is a fine straightforward job, not fast, but fast enough for all touring requirements: a fine slow puller, and a very admirable proposition at the price at which it is sold.

A moderate-priced outfit of 4½ h.p., this Quadrant model has chain drive, Sturmey three-speed gear box, and auxiliary saddle springing. A feature of the engine is that while the exhaust valve is on the side, the inlet is at the rear of the cylinder.

Winter in the Highlands

By H. Mortimer Batten.

To the Nature Lover and the Sportsman, the Sidecar is almost Invaluable.

(Concluded from page 250.)

THIS winter has been exceptionally mild, yet one has only had to travel upwards a matter of two or three thousand feet to find snow and ice reigning supreme. Several times this winter all but the fissures have been clear of snow, but usually it is back again within thirty-six hours.

My outfit has been used very largely for sporting purposes, and several times it has carried its load of the stiffened corpses of Alpine hares down from the mountain heights. These animals exist in great numbers on some of the hills. I have known as many as 300 to be killed in a short afternoon's drive, and several times I have shot as many as I cared to carry with an air rifle, because it seemed too unsporting to burn shot and powder on them. At other times, however, they are so wild that one can hardly get within rifle range of one of them.

In the Realms of Sport.

We are in the midst of some of Scotland's most famous deer forests, and during wintry weather we regularly see the kingly beasts driven down from the heights by the elements. The sidecar has several times proved of great value in conveying myself and the stalker to some distant part of the moor, which otherwise we could not have reached. During one or two days ptarmigan shooting it has also proved invaluable, for the ptarmigan belong only to the extreme heights, and it is too much of a good thing to climb to them in a single day, as is necessary if one has no other means of ascending the lower slopes. Of all the strange cargoes I have carried, however, the mountain hares weigh the heaviest, for keepers have a way of packing them in without estimating the load they are imposing on the small vehicle.

One autumn day, travelling over the heights to Glen Lyon with my wife in the sidecar, we had just reached the summit of the range and paused to ponder the magnificence of the view, when just behind a knoll, not forty yards away from us, a stag began to roar. This sound is one of the most impressive and awe-inspiring of all sounds in wild nature, and echoing across the slopes and glens, it is indeed as dreadful as the roaring of lions. Taking us thus by surprise on the extreme quietude of the autumn evening, we were a little startled till we realised what it was. It must have been an immense stag, for never have I heard a roar more powerful, but though I ran round the hill immediately in the hope of obtaining a glimpse of him, he had evidently scented us, for I could see nothing of him.

Disillusion.

A day or two later we were crossing the same heights when, free-wheeling down the nine-mile descent, we heard a stag roaring on the opposite side of the glen. I at once stopped, and we at length caught sight of him, two or three miles away. Though the sun was in our eyes we could distinctly see his magnificent antlers, as he stood like a king with a halo about his head on the heathered slope, perfectly still. We both waxed eloquent over his majestic beauty, moving on with a sense of the world's romance renewed, but when we came back next morning he was still there. Passing the same place a fortnight later I saw that he had not moved, so next time I took the glasses, and made

Winter in the Highlands.—

out a combination of a large boulder and a stunted pine!

I have never told my wife. I would hate to rob her of that romantic memory of a kingly beast standing enshrined amidst a halo of his native glory!

To the nature lover as to the sportsman some kind of light and hardy motor vehicle is invaluable in this country, and my own mount takes me on many lonely expeditions into the glens and corries where the motor vehicle is still a machine almost unknown. Last autumn I was busily employed in the study of the salmon which run from the sea into our small mountain streams. The subject is an endlessly picturesque and romantic one, as anyone would realise who has seen the salmon as I have seen them—scores of leviathans, wallowing with their great backs out of the shallow water, or dashing hither and thither in pursuit of one another, where the stream is little more than ankle deep, and only a few yards in width. All are come from the sea—fighting their way up the falls and rapids, mile after mile; distance seems to be no object to them, but to watch them thus on the spawning redds, when the sun is dying crimson over the peaks, and the slopes are bathed in deepest purple, is indeed to feel that one has seen the king of fish amidst the most kingly of his surroundings.

A Sunset.

But I feel that I shall be boring the reader with these subjects, which are neither technical nor topical, for they are the things of a land which few are so fortunate to know. The lover of the highway is, however, essentially a lover of the great open spaces, and whatever we forego in these lone lands, we, at any rate, have our compensations. When, for instance, the hills are white with snow, and the valley clear, the sunsets, especially in frosty weather, are beautiful beyond description. I shall never forget a sunset I watched over Loch Tay only a few days ago—the white peaks in the distance, fading off till one could not tell where range ended and sky began. But the peaks were not white—they were fiery, blazing red. Some of them looked as though cascades of liquid fire were pouring down them. Nearer the peaks were blue, mauve, purple, except for their very summits, which seemed veritably to be aflame. The loch below us was purple, deepest purple, but the pine headlands were merely a shimmer of blue cloud. It was a moment's vivid impression; going, going, gone, while all nature seemed to be holding its breath, and a real touch of romance was added by the three buzzards circling over our heads, their thin-edged "kew-kew" seeming to enhance, rather than to break, the stillness, while their wings flashed gold every time they glided broadside to the light.

A Practical Outfit.

I suppose I have already bestowed very high praise on my outfit, and intentionally so. I would sing its praises still further, but that the reader is apt to become a little weary of superlatives. Of this I am certain, that taking the P. and M. as a standard, the 3½ h.p. post-war engine is certainly equal to the 6 h.p. pre-war. I have to go a long way into the "interior" to find the hill which my engine will not take, and it has not been decarbonised for at least 2,000 miles. Its kick is really surpassing, and my average m.p.h. between home and our nearest shopping town, thirty-two miles away, is unprintable. The only reason why so many riders do not get good results out of single-cylinder sidecars is because they do not open the throttle. *The sole secret in driving a low-powered sidecar lies in keeping up the "revs."* Let your engine "rev." as hard as it reasonably will, and you will save bearings, tyres, and chains; but let it slog and it will

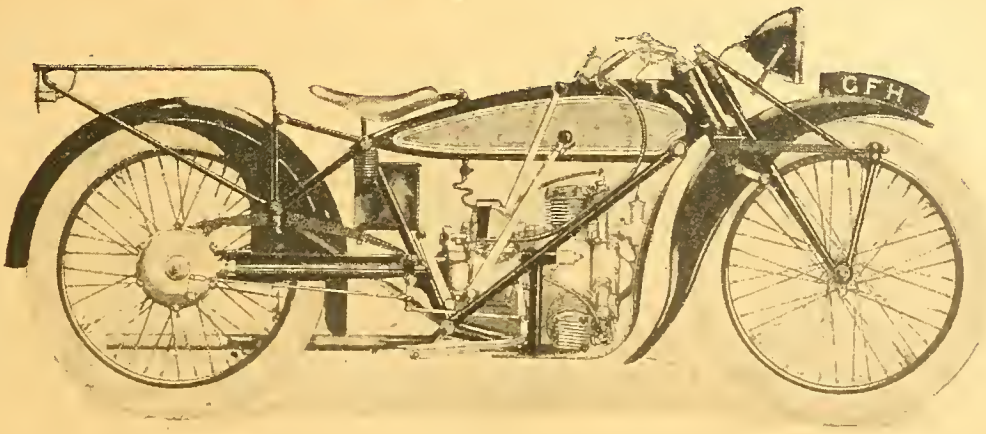
Where the road, the Highland Railway, and the River Dochart run side by side. Between Killin and Crianlarich, a section of the road traversed in last year's Scottish Six Days Trial.

The approach to Crianlarich. To the east lie the wilds of Perthshire. To the south and west, Loch Lomond

knock itself to bits. Regularly I drive my outfit at threequarter throttle for miles on end, knowing that it is more comfortable than it would be if I kept the speedometer reading at 25 m.p.h.

My engine, I would add, is entirely standard. It was new just prior to the last Scottish Six Days, in which event, in spite of its newness, it romped home with a gold. Owing largely to its mechanical lubrication, it has run always without fault or blemish, and is to-day better than ever. In the past my criticisms of this and other makes have not always been an unmixed blessing to the makers, but, as single-cylinder machines go, with their unquestionable advantages and disadvantages, I have nothing to criticise in this new model. The new type shock absorber improves the machine immensely, though I think the makers have been insufficiently generous in the amount of progressive movement the shock absorber permits.

Prices of Second-hand Motor Cycles.



A Schedule of Prices at which used and shop-soiled Motor Cycles were being offered in the miscellaneous advertisements of last week's issue of "The Motor Cycle."

MAKE, H.P., AND DATE.	CLASSIFIED PRICES.	AVERAGE PRICE.

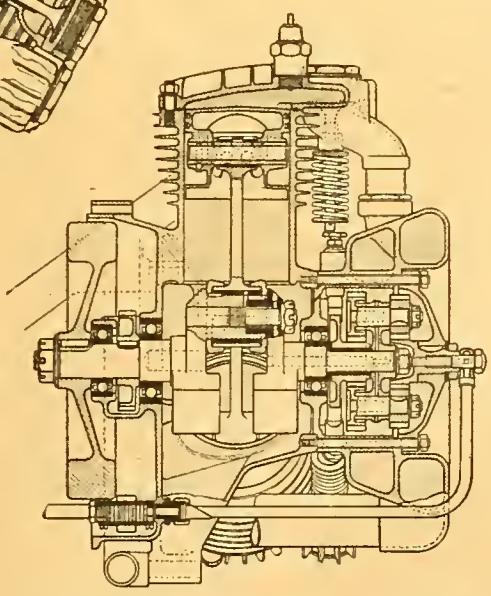
A High-powered Radial.

Proposed Design for a Three-cylinder Shaft-driven Motor Cycle.

RADIAL engines have gained quite considerable prominence of recent years in aeroplane and automobile circles, but, to date, only one British designer has adapted this type of power unit for a motor cycle. Therefore, the Eta, the design under review, which possesses a 7 h.p. three-cylinder radial engine, is of more than ordinary interest were it only on account of this very fact. Apart from the power unit, however, this machine possesses several unusual features.

870 c.c. THREE-CYLINDER RADIAL WITH 76 × 74 MM. CYLINDERS.

Part sectional front view, which indicates the general layout and also the method of supporting the engine in the frame.



A pressed steel petrol tank forms the backbone of the frame, and the method of housing the engine and gear unit in the lower "cradle" portion (to ensure easy removal) is at once apparent from the illustration. So also is the action of the front forks, the main girder of which is linked at the foot of the steering head and telescopically pivoted at its upper extremity, the whole working against a pair of laminated springs.

Including the carrier, the rear frame is suspended on two long cantilever springs.

Returning to the engine, which is set with its crankshaft axis longitudinally in the frame, the cylinders and crank case are one iron casting. Detachable cylinder heads are provided, however, which carry the "side-by-side" valves, and are also interchangeable. Attached to the front of the crank case is the timing gear case, which incorporates two annular manifolds, the rear the induction chamber and in front the exhaust. A single cam disc, with two cams, rotated at quarter engine speed by epicyclic gearing, acts directly on to the valve tappets.

Big-end Assembly.

To overcome the necessity of off-setting the connecting rods, these are provided at their lower ends with "feet" which bear on the outside of a bush surrounding the crank pin, and are anchored by end cheek washers of phosphor bronze. The whole assembly is held together by the bolt fixing which secures the two halves of the crankshaft at the crank pin. The crankshaft is supported on ball bearings, and between the flywheel and the rear crankshaft bearing a helically-driven shaft extends upward to the magneto. Directly underneath is a gear type oil pump, which draws oil from the gear box (which acts as a sump), circulates it throughout the engine, and returns it to the gear box *via* a large detachable filter. The cylinder dimensions are 76 × 64 mm., giving a total capacity of 870 c.c.

Sectional diagram of the Eta engine, showing big-end assembly, epicyclic timing gear, and inlet and exhaust manifolds.

A gear box of special design, and providing three speeds and kick-starter, forms the rear portion of the engine unit. Conversion gearing

A High-powered Radial.—

brings the shaft line on one side of the rear wheel, and a sliding universal joint at the fore end of the shaft permits unrestricted movement to the sprung rear wheel.

An internal expanding brake is housed in the rear bevel wheel, while an auxiliary brake is embodied in the gear box.

Mudguarding is on generous but symmetrical lines, and the general impression given by the design is very pleasing to the eye.

A platform for the magneto is provided above the gear-housing, and no doubt a dynamo could be similarly carried. The box directly underneath the saddle may be used as an accumulator-carrier in such a case, or, normally, it provides a useful and well protected toolbag. Provision is made for driving another useful accessory, the speedometer, from a final drive pinion in the gear box.

The designer is Mr. G. E. Halliday, of Mixenden, near Halifax, who was the winner of our "Ideal Design" competition shortly after the Armistice.

The Balance of Motor Cycle Engines.

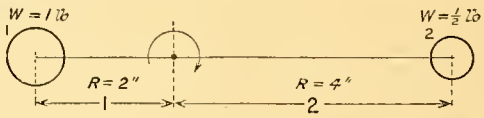
A Further Contribution to the Interesting Controversy on the Distinction between Static and Dynamic Balance.

FOLLOWING our comprehensive article in the issue for February 3rd, on the balance of motor cycle engines, letters from qualified engineers have appeared in *The Motor Cycle* for February 17th and March 3rd. Below we give a further contribution to the controversy from Mr. Georges Funck, A.M.I.A.E., who writes as follows:

I read with very much interest the further opinions in your issue *re* balancing, and would like to go a little further into the controversy with regard to the writer's original article, in which he stated that the alteration should be made "at a distance from the centre exactly equal to the crank radius," particularly as your correspondent, Mr. T. S. Bentley, also differs from me in this respect. I am also looking to Mr. Arthur Booth to defend himself about this point and come to my assistance.

Static or Dynamic of Balance.

This important question of balance is certainly not one of overlooking the distinction between static and dynamic balance, as Mr. Bentley accuses me of doing. Evidently dynamic balance is the only one to be considered, as the free forces we intend to neutralise through placing balance weights are non-existent in a non-rotating engine; and attempting to plant weights on the engine crankshaft to balance such forces might start the engine to move on its own account if we are not careful!



However, Mr. Bentley says: "The radius or leverage is constant at all speeds, but the effect of the weight varies as the square of the velocity." This is a very sweeping assertion, and I do not agree to the expression of "effect of the weight," unless defined more precisely. The effects of weights rotating round an axis at a given radius are numerous.

We may bear in mind for this discussion the two cases:

(1.) Mr. Bentley's weight (say 1 lb.) at a distance from the centre exactly equal to the crank radius (say 2in.) on one hand; and

(2.) A different weight which I propose to place at a different distance from the centre; and, to fix our ideas, we may take, say, ½ lb. at a distance of 4in.

Now, what are the effects of these weights revolving both at similar speeds at the moment of comparison? For this comparison we may best place them on the same axis and diametrically opposite one another, as per sketch, and consider

(a) Uniform Rotation.—For both weights we have the same *angular* velocity; and, if Mr. Bentley works out both radial (centrifugal) forces of W_1 and W_2, he will find them both the same at the moment under consideration, whatever speed he may choose for the calculation; hence they balance themselves at any speed (provided the speeds considered are reasonably below Einstein's speed of propagation of light in vacuum, so that we may neglect his theory of relativity).

The kinetic energy, however, stored in the weights at any considered speed is different for the two weights.

(b) Non-uniform Rotation.—Acceleration and retardation of the rotational motion is going to set up variable centrifugal forces, but, furthermore, also, tangential forces. Again the *angular* acceleration, or retardation, is the same for both weights, since they are fixed on the same axis, and the forces set up are once more equal in magnitude. The centrifugal forces balance at any moment. The tangential forces no more balance one another, but set up a torsional couple. This couple can only be balanced by having similar weights revolving in the opposite direction, which, of course, is beside the question of the present discussion of balance, and, therefore, does not enter into the discussion.

From these few considerations it will be seen that the effects of the weights "are rather complex."

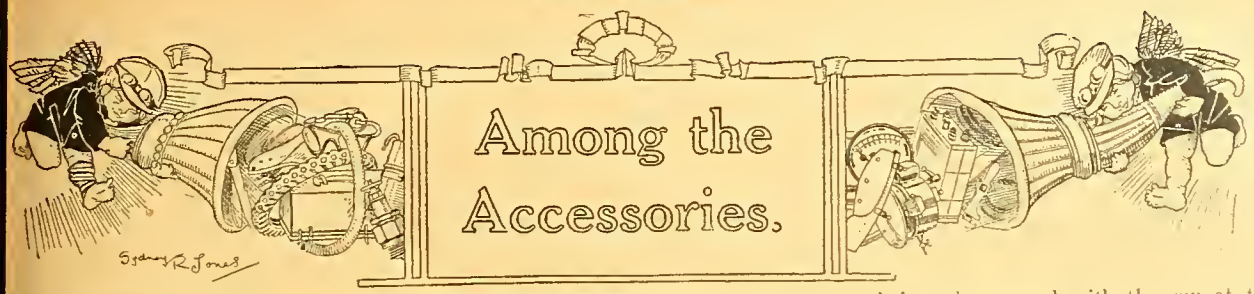
In the case of the balance under consideration, we are concerned about the forces set up through the reciprocating masses, of which we reduce their magnitude by the centrifugal forces set up by the rotating bobweight, and as such I hope the previous notes make it clear that the distance away from the centre is immaterial, provided the weight is chosen correctly.

MOTOR CYCLING IN ITALY.

IN the early part of the year a race was organised near Rome known as the Winter Grand Prix. The course was quite a tricky one, consisting of gradients and corners, and was 14¼ kilometres long. Most of it was protected by barbed wire, and, where not guarded by barbed wire, policemen and gendarmes.

The first motor cycle was sent off at 9.30 in the morning. In the 250 c.c. class the winner was Ciai on a Clyno, time 22m. 3⅕s., average speed 38.632 kilometres per hour.

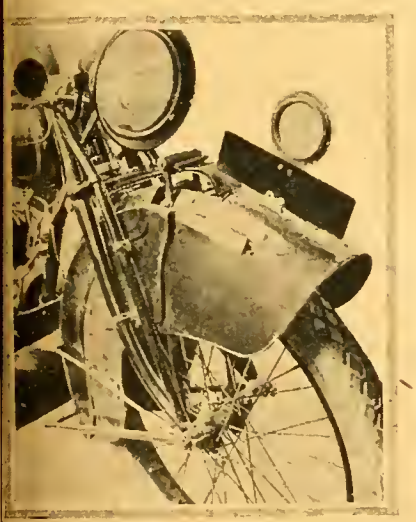
In the 350 c.c. class the winner was Del Sordo (Terrot), 17m. 44⅖s., average speed 49.041 kilometres per hour.



500 c.c. class.—(1) Minetti (Della Ferrera), 15m. 27⅕s., speed 53.298 kilometres per hour.

750 c.c. class.—(1) Garettoni (Harley-Davidson), 16m. 18⅖s., speed 53.302 kilometres per hour; (2) Rimoldi (Della Ferrera), 16m. 26⅖s.

1,000 c.c. class.—(1) Faraglia (Harley-Davidson), 13m. 17⅗., speed 65.446 kilometres per hour; (2) Malvisi (Harley-Davidson), 14m. 18s.



Sidecar class.—(1) Domenico Malvisi (Harley-Davidson), 14m. 56⅖s., speed 58.282 kilometres per hour; (2) Tozzoni (Indian), 16m. 21s.

The Harley-Davidson distinguished itself signally in this event. One of the most remarkable performances was by Faraglia who arrived within 28s. of the 200 h.p. racing Packard.

Improving the Mudguarding.

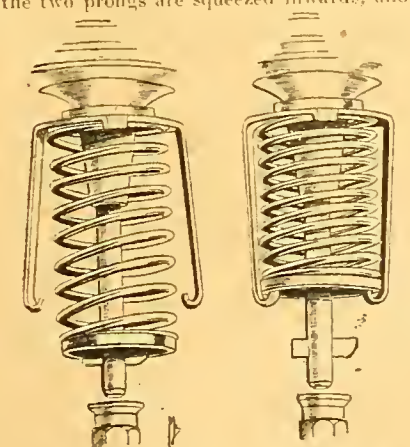
THOSE who have used sidecars to any great extent are able to realise fully that the mud thrown by the front wheel is extremely unpleasant and extremely difficult to prevent. This has been largely overcome by an extra wide valance fitted to the front mudguard of Indian motor cycles, and which has recently been placed on the market by Messrs. Godfreys, Ltd., 208, Great Portland Street, W.1. This valance is easily fitted, and does not necessitate the drilling of any holes, as it is attached to the front mudguard stays, while a longer bridge piece which takes the place of that fitted to the ordinary front guard extension, to the front fork, and to the other mudguard stay. We are assured by Mr. E. A. Colliver, the well-known competition rider, that it is most effective.

Godfrey's front mudguard extension for Indian motor cycles.

The K.L.G. G Type Plug.

A NEW plug lately brought out by the Robin Hood Engineering Co., and handled by Messrs. Smith and Sons, Great Portland Street, W.1, is the G1, which is suitable for a large number of motor cycles. Following usual K.L.G. practice, the insulation is of mica wrappings of the best ruby variety, while the exterior portion is further insulated by means of mica washers hydraulically compressed and afterwards highly polished.

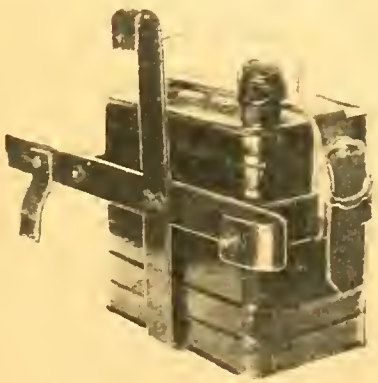
The chief advantage of the plug is that it is detachable. A steel disc seating on a copper and asbestos washer in the body of the plug ensures an airtight joint, and allows the plug to be reassembled after cleaning without affecting the spark gap. This body and the gland nut are zinc treated, and so are



K.L.G. type G1 plug.

impervious to rust. It is far easier to carry the detachable portion as a spare than a complete plug as, of course, it is much lighter. The usual type of spring clip terminal is supplied, which is very simple and effective.

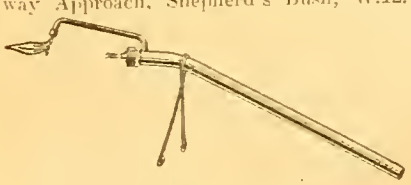
For Removing Valve Springs.



TO facilitate the removal of the valve cotter, Mr. C. H. Taylor, A.M.I.E., 44, Lonsdale Road, Barnes, S.W., has devised a simple permanent fitment. It consists of a tongued washer incorporating two prongs, and is made of steel. The washer portion takes the place of the ordinary washer between the valve spring and the valve guide, leaving the two legs hanging clear of everything. When it is required to remove the valve, the engine is rotated until the tappet has reached its highest limit. When this point has been attained, the two prongs are squeezed inwards, and their ends engaged with the cup at the base of the spring. The engine is again rotated, and when the tappet falls away from the valve the spring is held compressed, and the cotter can be withdrawn.

C. H. Taylor's valve spring lifter. (Left) In normal position when not required. (Right) The valve spring raised above the cotter.

Carrying Reserve Petrol.



A SIMPLE and convenient spare petrol can and carrier has recently been introduced by Messrs. B. S. Marshall, Ltd., 33 and 34, Foley Street, London, W.1. The carrier can be fitted to Triumph motor cycles without alteration, and to other makes simply by moving the adjusting screw shown on the left-hand side of the illustration, while the can has a capacity for slightly over half a gallon of petrol.

Marshall's spare petrol tin carrier.

An Ingenious Gas Blow Pipe.

VERY simple and ingenious is the small blow-pipe introduced by the Stanley Motor Co., of 173-4, Railway Approach, Shepherd's Bush, W.12.

S.L.B. self-blowing blow pipe.

Known as the S.L.B., it retails at a low figure, and, where gas is available, it provides a ready means of obtaining an intense local heat, such as is often required for small hard soldering jobs or the tempering of small drills. The illustration is practically self-explanatory; it will be seen that the gas itself is the blowing agency, it being directed across an air gap into the midst of a small pilot flame on a by-pass.

THE TRIALS IDEA IN FRANCE.

Some Observations on the Paris-Nice Event, by a Competitor.

WHATEVER disappointment was caused last year by the *fiasco* of the Paris-Nice trial, it may be said that it served to show that Continental competitions needed more complete organisation. This year there was a great improvement in the organisation throughout the trial, which was run on lines nearer to the standard set by sportsmen and trials organisers on this side of the English Channel.

In the trial itself it was indeed amusing when riding through the French villages to note how interested were the spectators when a machine went through at speed and creating a good deal of noise and dust. They immediately looked upon this man as a certain winner, whereas if one went through slowly and with consideration one was thought to be a very "dud" competitor. The roads were extremely dusty, and the big and fast cars of officials, pressmen, and other people following the trial gave the competitors much discomfort by the clouds of dust which they created.

I hope I am not criticising my late fellow competitors too unfairly when I say that their manner of starting off was quite needlessly spectacular. It may have impressed the spectators that they were heroes to shout and bustle as if their success depended on the fuss they made; and then at the word "*Partez*," they went off with a roar and at a speed that was quite unnecessary.

Taken all round, undoubtedly this year's Paris-Nice was a successful affair, and has done much to retrieve the position of this annual event in the eyes of motor cyclists after last year's fiasco.

Saturday preceding the trial was spent having the machines weighed and stamped and in obtaining numbers. Our movements were watched very closely and with much excitement by French pressmen and photographers, to say nothing of the local cinematograph man, who appeared to be very busy turning the handle.

Excitement at the Start.

The next day (Sunday) was devoted to the final details, tuning up machines, and getting everything ready for an early start from Montgeron. As no accommodation was available at this place, a number of the competitors, including myself, stayed in Paris, and journeyed out in the early hours of the morning, which was somewhat unwise, as the roads were exceedingly bad, and nobody appeared to know the way. However, we managed to arrive at the start about fifteen minutes before the first man was due to start. Our official starter of "*Partez*" fame was very much in evidence and as excited as possible.

The journey from Montgeron to Dijon was somewhat uninteresting, the road being very good, but the country flat, and nothing of interest happened. The second stage of the journey was much more severe. We enjoyed excellent weather and good roads, and reached Roanne through really nice scenery. Here lunch was taken, after which we took to the road again on our way to Lyons, where the competitors began to feel the effects of the trial. Many had, at this time, been having minor troubles, the roads between St. Etienne and Lyons being extraordinarily bad. The machines were then parked for exhibition the following day, which was patronised by crowds of people during the whole of the day, who were particularly interested in the different machines of British manufacture.

Increasing Severity.

An early start was made from Lyons next day, and here the trial began to get a little difficult. The roads now deteriorated somewhat, and the controls were so close together that, in the event of some poor, unfortunate competitor getting trouble, it was most difficult to make up time and get into the next control without penalisation. The weather continued to be perfect, and the scenery was excellent. Avignon was reached after a very trying and tiring day, but through beautiful scenery; and I think everybody was pleased to be able to retire for a well-earned rest.

The fourth and last part of the journey was undoubtedly the prettiest, and here again we encountered numerous controls a very few kilos apart. The ride through the Esterel is perfectly delightful, and the scenery such as the competitors saw during this part of the journey must be very hard to beat. Running into Cannes a great reception greeted all the competitors, and crowds lined the road to see the weary wanderers arrive. Coming from the dusty road to gaze upon the blue Mediterranean with British battleships in the harbour was, indeed, a pleasant and refreshing sight. The final stage: Cannes-Nice appeared to be a general "T.T." as everybody was now hurrying on, anxious to reach their destination. Here again crowds of people had turned out to watch the riders.

In conclusion, I should like to congratulate M. Hamond on the energetic and excellent manner in which he has organised this trial. He was to be seen everywhere with a cheery smile and kind word for everybody, and it was really surprising to witness the energy he displayed during the five days. The timing was very accurate, and I should say the checkers' watches (28 in all) must have been exceedingly accurate. The roads compared with last year were not half so severe, and undoubtedly the trial was organised much better from the point of view of the British competitors. During the luncheon stops the accommodation was good and food excellent. It seems a pity that the trial cannot be arranged to finish nearer the Northern coast or a circular course taken, as it is more difficult for competitors to return with their machines by train than it is for them to ride all the way down from Paris.

K.D.

The following are the winners of gold medals:

250 c.c. CLASS.—Piere (D.F.R), Denley (Velocette), Humphreys (Velocette), Berger (Velocette), and Price (Diamond).

350 c.c. CLASS.—Dubost (D.F.R.), Boulangier (D.F.R.), Walker (Edmund), Bauer (Yvels), and Peau (Peugeot).

500 c.c. CLASS.—Bastide (Norton), Barthélemy (Norton), Lazerge (Norton), Naas (A.B.C.), Detruche (A.B.C.), Bernar (A.B.C.), Rolly Gonnet (A.B.C.), Duverr (Rudge), Dard (Norton), Le Br (Blériot), Contant (Blériot), Brune (Blériot), Gabriel (Triumph), and Robe (Motosacoche).

750 c.c CLASS.—Foulhoux (Saroléa Lefèvre (Saroléa), Revet (Saroléa), Kay Dön (Zenith), Jacquin (Griffon), Pinne (Triumph), Gordon Uren (Triumph), an Sollet (Rover).

SIDECARS, 750 c.c. CLASS. — Laco (G.L.), without loss of marks.

SIDECARS, 1,000 c.c. CLASS.—Bertl (Indian), J. Psalty (Harley-Davidson Walbron (Harley-Davidson). Fento (A.J.S.), White (Sunbeam), and Hugh (Frera).

CYCLE CARS.—Mauve (Elfe), Pullin (d Marcay), Benoist (de Marcay), Lombar (G.N.), Honel (G.N.), Ramon Buer (G.N.), Casse (Morgan), Sandfo (Morgan), and Darmond (Morgan).

The Flying Kilometre.

This was, as usual, held on t western end of the Promenade d Anglais in the afternoon of Februa 25th. Only those who finished the tri took part.

250 c.c. CLASS.—1, Clech (Motosol 51s., speed 70.568 kilos. per hour; Denley (Velocette), 52⅖s.; 3, Humphre (Velocette), 55⅖s.

350 c.c. CLASS.—1, Walker (Edmund 43⅗s.; 2, Dubost (D.F.R.), 47⅗s.; Boulangier (D.F.R.), 53⅘s.

500 c.c. CLASS.—1, Naas (A.B.C. 36⅘s.; 2, Dard (Norton), 38⅗s.; Robert (Motosacoche), 39⅘s.

FROM PARIS TO THE RIVIERA.

Scenes in the Recent Paris-Nice Trial which attracted Considerable Interest throughout France.

(1) Two of the French-built A.B.C. motor cycles passing through a lane of interested spectators, such as was encountered in every control. (2) Kaye Don, the Zenith rider, one of the fourteen British competitors. (3) A French competitor on a 3½ h.p. Norton, a British machine which did well by obtaining four gold medals with four entries. (4) Competitors arriving in a mid-French town. (5) The competing motor cycles parked at Lyons for exhibition. (6) The starting after a check.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

WHEN WILL PRICES FALL?

Sir,—What about stocks of material in hand (purchased on the low market) when the finished articles were being sold on the highest market? You cannot have it both ways!

ARTHUR E. BALL.

PRICES OF CARBIDE.

Sir,—I wish to draw the attention of "Carbidier," who, in his letter of February 24th, asks why he has to pay 1s. 2d. per lb. for carbide. I admit myself that "it is a bit thick," but my point is that there is carbide (lumps) and carbide (dust). I myself, as a trader, am paying 49s. per cwt. wholesale. So whether the carbide at 31s. per cwt. retail is dust or not against my 49s. wholesale (real lumps), I leave to "Carbidier" to think out. TRADER.

Tenterden.

SIDECARRING EXTRAORDINARY.

Sir,—As a weekly reader of *The Motor Cycle*, I thought perhaps a little incident that happened recently might be of some interest to your readers. We are ladder makers, and lately a gentleman called on us and ordered a fifty-rung ladder to be made. A few days after he called to know if it were ready, and on being told it was quite ready but would not be delivered for a day or two he said, "Never mind, I will take it with me." When asked how he intended taking it, he said, "On my sidecar"; and, very much to our surprise, he laid the ladder (which measured over 40ft. long) on top of the sidecar, and rode off through the busy streets of the town with no more concern than if he had had a lady in the sidecar. A. BEER.

FOUR-STROKING.

Sir,—My experience is exactly similar to that of your correspondent, Mr. J. W. Clamp in *The Motor Cycle* of February 24th.

I find that normal two-stroking is only disturbed *(a)* on falling gradients, and *(b)* riding before a strong wind.

In both cases the engine is driven, or at least partially driven, by the machine, so to speak, and four-stroking is due to absence or deficiency of load, as is easily proved by a *very slight* application of the brake when two-stroking is resumed.

Could the problem not therefore be solved by some particular adaptation of the carburetter to the above conditions? ROADSTER

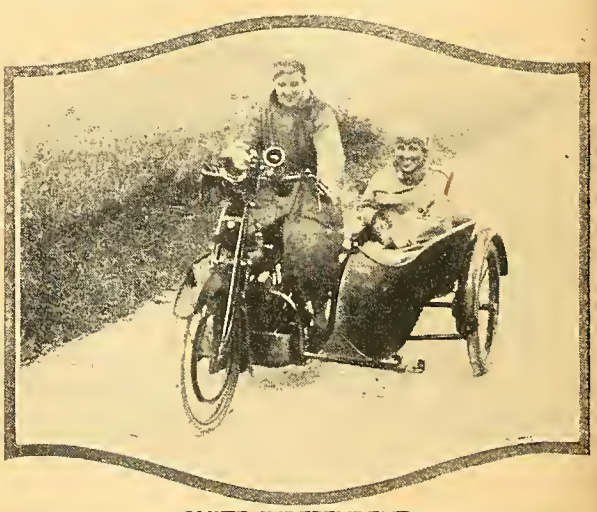
Portobello.

CAR V. SIDECAR.

Sir,—I am always interested to read in your correspondence columns what readers consider to be their ideal machines, and am writing to give you my humble opinion. I am a sidecar enthusiast, and have owned and tried a single-cylinder and twin-cylinder outfit, and have also tried a four-wheeled 8 h.p. runabout. My opinion, after trying the above, is that a medium-powered outfit is the cheapest and handiest way of motoring for two people. I would prefer a car any time if it was a good one, but my experience teaches me that it is better to have a first-class sidecar outfit than a second or third-rate car when one's means are limited like my own.

Here is what I consider the main points of my ideal outfit: a 6 h.p. twin-cylinder engine with outside flywheel, magneto behind the engine, three speeds and clutch, and kick start. I would like the shaft drive (similar to the F.N.), as I consider this better than chain or belt transmission, interchangeable wheels with 28×3in. tyres, *two* good internal expanding brakes, and I like the simplicity of the spring seat-pillar in preference to a spring frame. A tank to hold two and a half gallons of petrol and half a gallon of oil. A good bulbous back sidecar, well-sprung and with plenty of leg room, would complete my ideal 'bus. HOPEFUL.

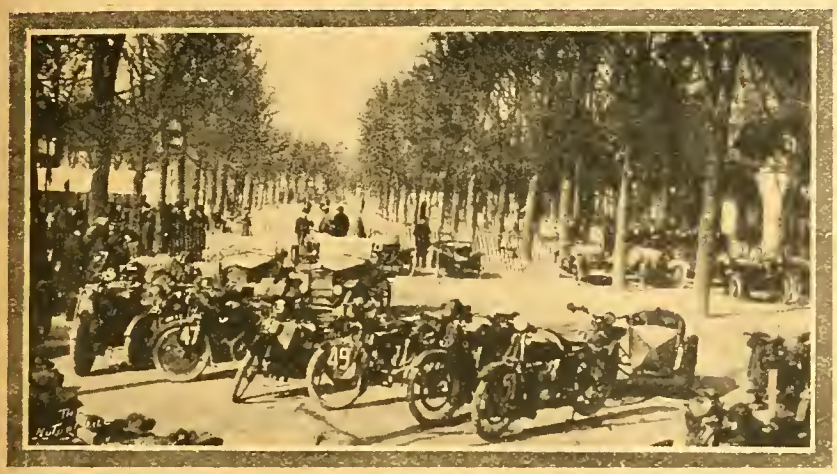
Leeds.



A PRICELESS LICENCE HOLDER!

Sir,—Possibly some of your readers might like to know how it is possible to make a licence holder in ten minutes, practically without tools, and at a cost of—nothing.

Recently, on the arrival of my licence, a tour of the garages here (Winchester) elicited the fact that no holder at a less price than 6s. 6d. was available, and considering this excessive on top of a £4 tax, I routed out a shallow cigarette tin lid, square in shape, and just taking the licence. The first process was to punch two small holes in the back, through which a piece of copper wire was passed to serve as an improvised clip. Then I "slit" each of the four sides at the corners. Next, from the interior of my old army hat, I rescued the circular piece of transparent celluloid, and from this cut two square sheets, the same size as the licence.



Everything now ready, first a thin layer of packing was placed in the bottom of the lid (to prevent the wire previously mentioned from chafing the licence), then the licence, sandwiched between the two squares of celluloid.

All that remained to be done was carefully and tightly to hammer down the sides of the lid, taking particular care that the corners overlapped properly. The result was a serviceable, if not particularly picturesque, holder, and likely to survive all weathers. The holder is square instead of the popular circular shape; but this, of course, does not signify. No patent has been applied for! DOUGLAS E. ROSS.

QUITE INDEPENDENT

The wife or fiancée of a motor cyclist is wise indeed who learns to handle a motor cycle. What can be nicer than to get out on the open road whilst the husband is at business, instead of waiting for him to take the machine out at week ends? The sidecar illustrated is a Lea-Francis, on a Kentish road

THE PARIS-NICE TRIAL.

En route for the South. A group of competing machines. Incidentally, many complained bitterly of the pot-holes encountered, and were unfortunate with their tyres.

WHERE WILL THE MONEY GO?

Sir,—In your issue of February 24th "Paghaled Wallah" says it would be interesting to know the total revenue derived from the new scale of taxation of motors. I should say it would be more so to know the total amount derived from the tax put on petrol some years ago and what has been done with it.

If I remember rightly, it was put on for the maintenance and upkeep of the roads, yet almost every road nowadays is in a most scandalous condition. From Birmingham to Nottingham the roads are not fit to travel on, especially between Seckington and No-Man's-Heath, where they are worse than ploughed fields, and have been for years. Now a good many of us would like to know whether any pressure can be put on anywhere to get something done. Where has the money gone? AU GRAND SERIEUX.

Burton-on-Trent.

[According to the report of the "Departmental Committee on Taxation and Regulation of Road Vehicles in Great Britain and Ireland," £6,582,500 is required for improvements of roads. England and Wales £4,700,000, Scotland £382,500, Ireland £500,000, County and Metropolitan Boroughs £1,000,000. The estimated proceeds in round figures of the new rates were given as follows: 265,000 motor cycles £850,000, 210,000 private cars £3,300,000, 70,000 hackney vehicles £1,125,000. 107,500 commercial vehicles, etc., £2,300,000, motor drivers' licences, etc., £450,000, total £8,025,000. The number of vehicles was estimated as at midsummer, 1920.—ED.]

BRITISH V. AMERICAN SPEEDS.

Sir,—I am much interested in the correspondence in your columns as to the reason why a motor cycle in England does not give the same speed under the same conditions as in the States. Your correspondent's, Mr. Hartley's, suggestion is clearly based on a fallacious reason, although he may have hit upon the correct cause of the discrepancy. It is the water vapour in the air which leads to the trouble.

Here are the reasons. Assuming a hypothetical case in which we have a cycle of cylinder capacity such that one litre (1,000 c.c.) of pure dry air, mixed with the exact quantity of pure benzene vapour (31 c.c.), just fills the cylinder and completes combustion. The equation is:

$$2C_6H_6 + 15O_2 = 2CO_2 + 6H_2O$$

Benzene. Oxygen.

This means that 156 parts of benzene require 240 parts of oxygen for their combustion. But air is not pure oxygen, and to supply the necessary oxygen we shall want 1,030 parts of pure dry air.

Assuming English air at 20°C. to enter the cylinder completely saturated with water vapour, we shall find by calculation that it requires 0.189 gram of benzene for its complete combustion, whereas American air, only half saturated with water vapour, would require 0.192 gram of benzene. Pure dry air, with no water vapour, would require 0.195 gram of benzene. It is obvious that 0.192 gram of fuel will give out more energy than 0.189 gram of fuel.

The difference, although slight, would account for a 1½% drop in power developed.

There is a further source of loss, also. The extra water vapour in English air would require to be heated up to the temperature of explosion, and this would absorb a further quantity of power.

This example, although hypothetical, explains the paradox. Needless to say, motor fuel is not pure benzene, nor is English air always fully saturated. But the facts are relatively correct for ordinary fuels and ordinary air. CHEMIST.

Huddersfield.

Sir,—Whilst the correspondence on this matter, in your issue for February 24th, clearly showed the fallacy of supposing that dry air decreased the wind resistance on a motor cycle, it was not mentioned that the density of the air has a great deal to do with engine performance.

On page 60 of *The Automobile Engineer* for February there are, amongst other things, tables of how the b.h.p. and i.h.p. of a given engine vary at different altitudes.

A rough glance at these indicates an increase of about 10% more horse-power for a greater air density equivalent to an increase of 2in. barometric pressure.

It appears that the air on these American tracks is considerably dryer, and, presumably, hotter, than in England. What the actual air density is I do not know. But, supposing the average barometric pressure to stand 2in. higher than our own standard, there would be the 10% increase of horse-power available for a given engine. That the increased horse-power outweighs the increased resistance of a greater air density is shown by the fact that aeroplanes make their highest speeds at the lowest possible altitudes.

I do not put forth this argument to account completely for the increased speeds obtained on motor cycles in America, but more to interest motor cyclists in general in the fact that an engine of low volumetric efficiency, such as most two-strokes, may be adversely affected when climbing over a mountain pass, for instance. N.S.D.

Cambridge.

LIMITATION OF T.T. ENTRIES.

Sir,—I notice that it has been decided to limit arbitrarily the number of entries for the T.T. races to 100.

It seems to me a pity to turn away money, and possibly also good performers, and I would suggest to the A.C.U. that a better way would be to alter the time for the Senior qualifying practice lap from 60m. to 50m., and for the Junior from 80m. to 60m.

This would, I think, weed out the bad machines, and/or bad riders, and also keep the actual number of starters down to a suitable figure.

When the present course was first used, quite as much skill was needed to go round in 60m. and 80m. respectively as is now required with the improved modern machine to do 50 and 60 minute laps.

My suggestion seems reasonable, because, I take it, the A.C.U. wants to make the races a financial success, and also, if possible, to give everybody a chance.

My experience has been that, even in 1914, there was never any congestion during practice, and for the actual races I take it that the number of starters is limited to the number that can be got away before the first man is due round for completion of his first lap.

After all, if it should turn out that for reasons connected either with man or machine an entrant is unable to get round comfortably in the suggested modified times, he is far better out of the actual races; and, from the general public's point of view, the spectacle will not be affected in the least. VIVIAN OLSSON.

FOR THE ATTENTION OF THE MINISTRY OF TRANSPORT!

Sir,—Your correspondents "Commonsense" and G. W. Huntbach are of the opinion that the speed limit should vary with the nature of the road, on different parts of the same road, and with the weight of the vehicle.

No one will deny the justice of these suggestions; my only criticism is that several additional factors should be taken into account. I submit that the formula

$$\frac{A \times c\,(x+v)}{w^2+d \times re}\,K$$

should determine the legal speed limit in any given case, where

A = the width of the road in feet.

c = the diameter in metres of a circle of which the road forms an arc.

x = the distance in yards from the nearest cross-roads.

w = the weight of the vehicle in pounds.

r = the ratio of its horse-power to brake power.

v = the visibility in yards.

e = the number of endorsements on the driver's licence.

K = a constant, and

d = the distance in miles from the nearest hospital.

No difficulty should be experienced in persuading Sir Eric Geddes to introduce a regulation that all vehicles be fitted with an automatic governor controlling the speed of the machine according to this formula. The question would then be finally settled. L. P. GARROD.

AUTOMATIC LUBRICATION—A REPLY TO "K.B."

Sir,—Having read the letter of your correspondent "K.B." in your issue of February 10th, criticising the Peters system of automatic engine lubrication, we hope you will extend the courtesy of your columns to this reply.

As you kindly point out, the Peters machine on which this system is embodied is a two-stroke, and while, approximately, the same ratio of exhaust opening occurs as with a four-stroke, it occurs in two periods to the one period of the four-stroke. However, while we have not tested this system on a four-stroke engine, we have no doubt it could be adjusted to work on an engine of that type as effectively as it does on our own machine.

To reply in detail to "K.B.'s" criticisms so far as they affect the Peters machine, and in the order of his letter:

The silencer, while being of large capacity, and thus allowing the gases to cool and contract in emission, has not an unduly restricted outlet, but it must be admitted that in any silencer as fitted to motor cycles the mean internal pressure is appreciably above atmospheric. By tapping the exhaust pipe close to the port with a pipe running to the top of the oil tank of large length to bore ratio, the flow of the gases is restricted, and the variations about the mean pressure within the tank are reduced.

While "K.B.'s" remarks anent inertia are not strictly accurate, and we would refer him to a study of "wave impulse" gear for further information on this point, it is certainly a matter of degree, and the inertia of the oil will assist in damping out oscillations and keeping the flow past the needle valve steady at the rate due to mean exhaust pressure. Were this not so, however, and even if the pressure varied as "K.B." suggests, he seems to miss the fact that a flow of oil would occur at times of maximum pressure. This would be far less intermittent than even the usual drip feed. If "K.B." will again study the Peters system he will find that his suggested non-return valve would not only complicate an at present ideally simple system, but would destroy its most essential and pleasing features, its automaticity of control of supply, and starting and stopping.

The small pipes leading from the exhaust to the paraffin gadgets, referred to by "K.B.," are in no case analogous, as there a large flow of gas is essential, whereas, in our case, once the pressure is established there is no considerable flow. Further, this pipe, being also the decompressor pipe, is scavenged in the outward direction by the flow of clean unfired gas when decompressing. In the light of our experience, if this pipe is cleaned when the cylinder is decarbonised there is no possibility of trouble in this direction.

As the ordinary type of drip feed is by gravity from drip to engine, we fail to understand "K.B.'s" remarks upon this point. As, further, the feed pipes in the Peters system are warmed by being run in a cluster with the pressure pipe, we feel we can claim a distinct advantage in the feeding of oil in cold weather.

Discussing the question of loss of tank pressure, if this is due to an obstruction in the pressure pipe this obstruction would have to seal the pipe to take effect (a thing practically impossible), and long before this occurs a warning is given by the choked state of the pipe when decompressing. If this is due to a leaky filler cap this would have to be so bad as to allow a free flow for the whole volume of gas passed by the pressure pipe, and such a condition would be immediately obvious to the senses of smell and sight. We have already settled the question of a non-return valve.

In the case of a choked feed pipe (a most unlikely event) oil would be forced through the vent and give obvious warning. When the tank runs empty exhaust gas is emitted from the vent and again the warning is obvious.

J. A. PETERS.

MORE TAXATION ANOMALIES.

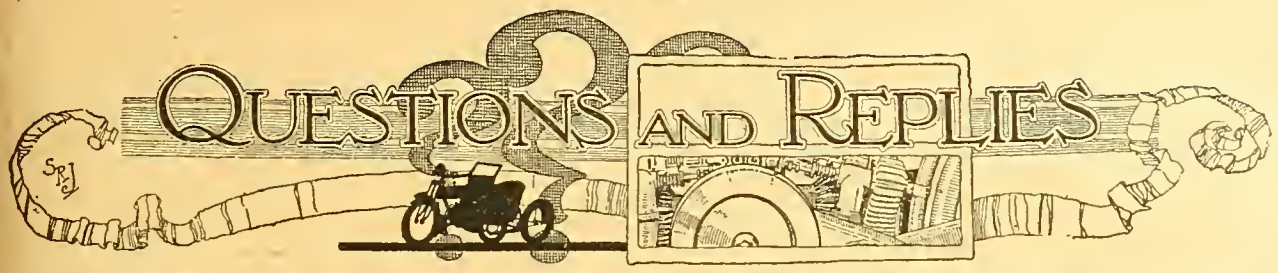
Sir,—I see that I ought to have prefaced my notes on the subject of taxation with the remark, "This is, in part, intended as a joke." This omission has been kindly made good by the Editor in the reference to a letter from "Fortiter et Recte," but I fear that "Chi" has also missed the point of some of my remarks.

What I maintain is that motor cyclists in general do not so much object to an increase in taxation as to the very obvious injustices which the new regulations contain. One of these injustices I endeavoured to point out by means of a suppositious case. The question is not whether a machine weighing 198 lb. can draw a heavy sidecar with satisfaction to its owner, but, since the new taxation is on a weight basis, which should pay the greater tax—a solo machine weighing 205 lb. or a sidecar outfit weighing over 300 lb. The case I put is not so absurd as "Chi" thinks, for have we not heard of the wonderful sidecar performances put up by the Ivy and many other little two-strokes? These machines stand up to sidecar work in truly remarkable fashion.

It is true the 2 cwt. makes as absolute a limit as 200 lb.; but if "Chi" will refer to my article he will see that I recommended a more gradual scale of taxation, advancing 10s. as each limit was passed instead of being doubled at 200 lb.

"Chi" says that quarterly licences cannot be granted to motor cyclists because it would affect the revenue adversely. The same thing can be said with equal justice about granting quarterly licences to car owners. The same rules should apply to all.

Motor cyclists want good roads perhaps more than any other form of traffic—motor or otherwise—and are willing to pay their share. But, obviously, those who make most use of the roads and do the most damage should pay most highly for their upkeep.



Meriden. JAM SATIS.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ABNORMAL BIG END WEAR

I have a 2½ h.p. four-stroke engine, and am troubled with excessive wear in the big end bush. It requires rebushing after every sixty to one hundred miles. Would it be possible for phosphor-bronze bushes to wear in such a short period; or do you think the shaft is wearing? If the latter, could the shaft be case-hardened; or does it require a new crankshaft? The crankshaft is solid, there is no sign of wear in other bearings, and the engine is kept well oiled.—E.F.M.

If phosphor-bronze is used for the big end bushes they should certainly not require renewing after only 100 miles running. It is unlikely that the shaft itself will wear appreciably in this distance, even if it is not hardened; and we should imagine that the cause of the trouble is in all probability due to your omitting to drill the necessary oil holes in the bush. If the bushes are grooved with suitable oil ways, and the excessive wear still continues, it would be advisable to return the engine to the makers.

MANAGEMENT OF TWO-SPEED MACHINE.

Can you advise me as to the cause of knocking in the engine of my machine when changing from low gear to top after going up a hill? It does this invariably unless the road is at once on the downward grade, *e.g.*, if slightly uphill, yet not sufficiently so to use low gear. I retard the spark at the time of changing, but it needs two or three attempts to get going, and sometimes I have to return to low gear until the road is easier. The machine is a 3½ h.p. Humber with Roc two-speed (1912); engine in fair condition, and top gear 4⅞ to 10. Otherwise it runs well and will take the ordinary short hills with a clear run on top gear, with a passenger on the carrier. The engine is timed to the makers' setting. Owing to a big petrol consumption when I bought the machine, I have lowered the petrol level and am now doing about 80 to 90 m.p.g., but the engine has lost its dash on steep hills.—F.W.S.

In the case of a machine equipped with a two-speed gear with a very wide difference between the high and low ratios, it is usual to experience some difficulty in changing back again to top gear after climbing a hill on low, unless one is actually on the level ground at the top. In order to effect an easy gear change you should speed up the machine to about 10 m.p.h. on low before changing gear, that is, if you wish to get back into top before reaching the actual summit. It is much better, however, with a gear of this description, to continue to the top of the gradient on low gear, reducing the engine speed when it tends to race as conditions become easier, and so completing the climb quite slowly; then change into high gear again when a level stretch of road has been reached. The top gear of 4⅞ to 1 is reasonably high, and this, of course, increases the difficulty of changing. The petrol consumption is not too bad with this type of machine, and you might regain some of the lost power by fitting a slightly larger jet, which you can do without seriously increasing the consumption when you have lowered the level.

Important Dates.

Sat., March 19th—Birmingham M.C.C. "Victory" Reliability Trial.
Sat., March 19th—Stockport M.C.C. Open Hill Climb.
Fri., March 25th—Richmond Meet.
Fri., March 25th, and Sat., March 26th—M.C.C. London Land's End Trial.
Mon., Mar. 28th—Westmerland M.C.C. Open Hill Climb
Mon., Mar. 28th—East Midland Centre A.C.U. Open Hill Climb.
Fri., April 8th, and Sat., April 9th—Western Centre A.C.U. two-day Open Trial.
Fri., April 15th, and Sat., April 16th—Ealing and District M.C.C. London-Holyhead-London 24 hr. Open Trial.
Sat., April 16th—Yorkshire Centre A.C.U. Open Hill-climb.
Sat., April 23rd—Midland Centre A.C.U. Open Reliability Trial.
Wed., April 27th—A.C.U. One-day Trial.
Fri., May 13th, and Sat., May 14th—M.C.C. London-Edinburgh Run.
Sat., May 21st—Western Centre A.C.U. Open Hill Climb.
Wed., May 25th—A.C.U. Silencer Trial at Brooklands.
Sat., May 28th—East Midland Centre A.C.U. Open Hill Climbs.
Tues., June 14th—Junior T.T. Race
Thurs. June 16th—Senior T.T. Race.
Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup
Mon., July 4th to Sat., July 9th—Scottish Six Days Trial.
Wed., July 6th, and Thurs., July 7th—Arbuthnot Trophy Trial.
Sun., July 24th—Motor Cycle Grand Prix Race in France.
Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.
Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.
Sat., Sept. 17th—Grand Prix Race for Cycle Cars

LEAKING CARBURETTER.

I have experienced continual wastage of petrol through my Amac carburetter dripping. At first I altered the float and tightened the jet, etc., without avail. At last I have traced the trouble to two little holes above the jet chamber from which petrol continually flows. Could you please advise?—L.C.B.

Without actual inspection of the carburetter, we cannot give you a definite answer, but we should imagine that the leakage of petrol from the base of the mixing chamber is due to the level being too high or to the needle valve in the float chamber not seating properly. The level should be so adjusted that barely ⅛in. play is allowed to the float. We suppose, of course, that the float is not punctured and weighted down by petrol which has leaked inside. If the needle valve is leaking, obtain a new needle or grind in the old one with very fine grinding paste. Also make sure that the cone seating of the jet platform in the body of the carburetter does not leak.

A TWO-STROKE FLAT TWIN.

I have a Levis two-stroke horizontally opposed engine in practically new condition which I wish to use on a light cycle car of about 3 cwt., using friction gear. (1.) The bore and stroke are 62×70 mm. respectively; what is the horse-power and the capacity? (2.) What are the average revolutions per minute with load? (3.) Does the magneto, or if coil ignition is used, run at the same speed as engine shaft? (4.) Do the cylinders fire both at the same time? (5.) Can I join the plugs up in parallel, or will they have their connections from separate contacts on the commutator which allows spark to occur? (6.) What is the best means of lubricating this type of engine?—E.F.G.

(1.) The total cylinder capacity is 422 c.c., and the engine is rated at 4½ h.p.; at the same time we think that the car you propose building is much too heavy for such a small engine. (2.) This is a question which you should refer to the makers, but we should imagine that it will give its rated power at about 1,400 to 1,600 r.p.m. (3.) The magneto should run at engine speed. (4.) The cylinders fire simultaneously. (5.) You cannot run the plugs in parallel; you need a special two spark magneto. (6.) You might use the petroil system, but it would be better to lead oil directly to the main bearings; consult the makers.

WEAK SPARK.

While I turn the armature of my magneto by hand it gives a very weak spark with the terminal touching the magnets. While turning at fairly good speed, it only sparks at a gap equivalent to three leaves of *The Motor Cycle*. Do the magnets want remagnetising? I may add they will pick up an article weighing 7 lb.—W.T.

There is apparently some defect in the magneto, as, at a moderate speed, you should get a spark of at least $\frac{1}{16}$in. Make certain that the contact breaker points separate smartly to the extent of $\frac{3}{64}$in., and that the cam ring is in the fully advanced position. There should be no need to have the magnets remagnetised if they will hold a weight of 7 lb.

CORK INSERT CLUTCH.

I have a 6 h.p. machine with a three-speed gear fitted with cork plates in the clutch, and although adjusted almost to full it slips and will not grip unless it is tightened to its full limit. I have had the clutch out, and think it should still stand a great deal more wear. I think that the cork in this case is inclined to chip and wear quickly. Do you think if fitted with Ferodo rings on the same plates it would be satisfactory?—E.R.

While the trouble with your clutch may be due to wear of the cork inserts, it is just possible that it is the result of wear on the splines upon which the clutch plates slide. You should examine these and remove with a file any steps or shoulders which appear on them, as the plates may bind and not close up properly under the pressure of the spring. If this does not effect a cure, it will be necessary to renew the corks. You might be able to obtain Ferodo inserts to replace the corks.

USING A STARTING MAGNETO.

(1.) I have a high-tension magneto which sparks twice in one revolution, but has only one high-tension terminal. The swells on the steel cam are directly opposite. I wish to use this machine on a 2 h.p. (four-stroke) single-cylinder stationary petrol engine. Can I make this magneto give a single spark by altering the steel cam? (2.) If so, shall I have to take off one of the swells or fill up one of the gaps on the cam ring? (3.) The engine is fitted with a sparking plug and battery ignition. If this alteration can be done, will it make any difference to the inside workings of the magneto?—J.W.W.

(1.) Presumably, the magneto is one of those used for the starting of aeroplane engines, and it should work quite well on a single-cylinder four-stroke engine, if you run it at half engine speed. (2.) It would be better if you remove the raised portion of one of the cams; but there is no absolute necessity for doing this, as if you time it so that one of the sparks occur about 4 mm. before the top of the compression stroke, the other spark will occur at the top of the exhaust stroke, where it will do no harm. (3.) The removal of one of the cams would not affect the internal parts of the magneto in any way.

THE NEXT STAGE!

MOTOR CYCLISTS interested in small or large cars should read

The Autocar

Every Friday 4d.

the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

ADJUSTMENT OF N.S.U. TYPE GEAR.

I purchased an N.S.U. type gear, and I have had it in use about twelve months. It seemed very loose and worn, so I sent it to the makers for overhauling and new parts. I am not complaining of that because I do not understand it very well; but what I should like to know is whether you think I have handled it wrongly. When changing gear, is there any special method to avoid this excessive wear? I notice, by following your pages, that with a countershaft gear it is advisable to lift the exhaust when changing. I do not suppose the instruction will apply to the N.S.U. gear, as the handle is on the same side as the exhaust lifter lever.—J.R.

You do not state the particular nature of the trouble which arose with your N.S.U. gear, therefore we cannot help you very far. The main bearings of this gear are adjustable, but you might not be able to carry this out yourself unless you are fairly skilful in the use of tools. The adjustment is made by unscrewing the left-hand lock ring on the pulley body with the large C spanner provided. As the ring is turned, one of its notches will uncover a small grub screw, which will release the pulley body on its thread. Tap the body of the gear a little to the left to tighten the bearings, and replace the grub screw, and finally knock up the lock ring very securely. Gear changing should be done quickly, and there is no necessity to raise the exhaust valve lift, although we have never found any difficulty in so doing while operating the gear with the right hand. If the gear is controlled by the left hand, you may throttle down at the same time, opening out again when changing from low to top.

EXPERIENCES WANTED.

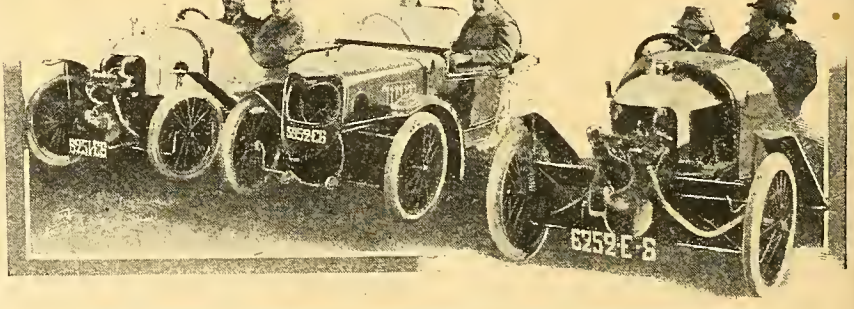
"L.S." (Sandown, I.O.W.).—8 h.p. Campion taxi outfit. Costs, ease of starting, licences, etc.

RECOMMENDED ROUTES

KETTERING TO BRIGHTON.—T.P.B.

Kettering, Northampton, Towcester, Buckingham, Aylesbury, Wendover, Amersham, Beaconsfield, Slough, Windsor, Chertsey, Weybridge, Cobham, Leatherhead, Dorking, Horsham, Brighton.

ERITH TO TORQUAY.—A.S.



Erith, Sidcup, Bromley, Croydon, Sutton, Epsom, Leatherhead, Guildford, Farnham, Alton, Alresford, Kingsworthy, Winchester, Stockbridge, Salisbury, Wilton, Shaftesbury, Sherborne, Yeovil, Crewkerne, Chard, Honiton, Exeter, Dawlish, Teignmouth, Torquay. Approximately 206 miles.

BEDFORD TO FARNHAM.—W.M.

Bedford, Ampthill, Flitwick, Toddington, Houghton Regis, Dunstable, Newmill, Berkhamsted, Chesham, Amersham, Beaconsfield, Farnham Common, Farnham Royal, Slough, Eton, Windsor, Virginia Water, Sunningdale, Bagshot, Farnborough, Aldershot, Farnham. Approximately 79 miles.

COTTINGHAM TO GREENWICH.—J.C.

Cottingham, Hull, Barrow-upon-Humber, Croxton, Milton Ross, Wrawby, Brigg, Spital-in-the-Street, Lincoln, Leadenham, Manthorpe, Grantham, Colsterworth, Great Casterton, Stamford, Wansford, Peterborough, Norman Cross, Stilton, Alconbury Hill, Buckden, Eaton Socon, Girtford Bridge, Biggleswade, Baldock, Stevenage, Welwyn, Hatfield, Potters Bar, Botany Bay, Enfield, Chingford Green, Woodford Green, Snaresbrook, High Street, Wanstead, Cambridge Park Road, Blake Hall Road, Rabbits Road, Romford Road, North Woolwich, Woolwich, Greenwich. Approximately 199 miles.

GOLD MEDAL WINNING MORGANS IN THE PARIS-NICE TRIAL.

It will be observed that one of them differs slightly from the standard design of the Grand Prix model, the one on the left having a completely enclosed bonnet. Built under licence in France.

RELATIVITY: WHAT IS IT?

The Much-talked-of Einstein Theory—a Problem for the Thinker and the Mathematician.

THE reader is probably acquainted with the method of specifying positions of points in a plane by their distances from two mutually perpendicular lines, or if the points are in space by their distances from three mutually perpendicular planes like adjacent sides of a flat-sided box. The method is, in fact, in common use for exhibiting relations between quantities by graphs or diagrams. These sets of axes, as they are called, together with any scales used for measuring, must be supposed rigid, otherwise the events or points which they are used to specify are indefinite. The lengths which locate any point with reference to a set of axes are called its co-ordinates.

When such systems are used for physical purposes, they must be supplemented by clocks to enable the times at which events occur to be determined. The clocks must be synchronised, and must go at the same rate, but it must suffice here to state that this is possible without indicating how these conditions can be attained. A system of axes with its clocks will hereinafter be called a Frame of Reference, and every observer will be supposed to be provided with such a frame partaking of his motion. All the objects which partake of an observer's motion will be called his *system*.

It is a question whether among all possible frames of reference any one frame or class of frames is more suited than another for the mathematical statement of physical laws. This is for experience to decide, and a Principle of Relativity is a statement embodying the answer.

The Mechanical Principle of Relativity.

It has been ascertained that all such frames are equally suitable for the mathematical statement of general *mechanical* laws, provided that their motion is rectilinear and uniform and without rotation. This fact is comprehended in the general statement that *all unaccelerated frames of reference are equivalent for the statement of the general laws of mechanics*. This is the mechanical principle of relativity.

It is well recognised, however, that the laws of dynamics as hitherto stated involve the following assumptions:

(1.) Lengths of rigid bodies are unaffected by the motion of the frame of reference.

(2.) Measured times are likewise unaffected.

That is to say, that any length measured on his own system by either of two relatively moving observers appears the same to both observers, or that lengths of objects and rates of clocks do not alter whatever the motion relative to an observer. These assumptions seem so obvious that it is scarcely perceived that they are assumptions at all. Yet this is the case, and, as a matter of fact, they are both untrue.

The Special Principle of Relativity.

Although all unaccelerated frames of reference are equivalent for the purposes of mechanical laws, this is not the case for physical laws generally as long as the above suppositions are adhered to. Electro-magnetic laws *do* alter their form according to the motion of the frame of reference—that is to say, if these suppositions are true, electro-magnetic agencies act in different ways according to the motion of the system in which they occur. There is nothing *a priori* impossible in this, but it does not agree with experiment. The motion of each locality on the earth is continually changing from hour to hour, but no corresponding changes occur in electro-magnetic actions. It has, however, been ascertained that on discarding these suppositions the difficulty disappears, and electro-magnetic laws retain their form under all circumstances of unaccelerated motion. According to the theory of relativity, the correct view which replaces these suppositions is deducible from the following postulates:

(1.) By no experiment conducted on his own system can an observer detect the unaccelerated motion of his system.

(2.) The measure of the velocity of light in *vacuo* is unaffected by relative motion between the observer and the source of light.

Both these postulates are well established by experiment. The first may be illustrated by the familiar difficulty of determining whether a slowly moving train one happens to be sitting in, or an adjacent one, is in motion. The passenger has either to wait for bumps (that is, accelerations) or else he has to look out at some adjacent objects which he knows to be fixed, such as a building (that is, he has to perform an experiment on something outside his system), before he can decide.

The second postulate is an obvious consequence of the wave theory of light. Just as waves in water, once started by a ship, travel through the water with a velocity independent of the ship, so waves in space travel onward with a speed bearing no relation to that of the body which originated them.

It is not difficult to deduce from these postulates certain remarkable conclusions relating to the systems of two observers, A and B, in relative motion, among them the following:

(1.) Objects on B's system appear to A to be shorter in the direction of relative motion than they appear to B.

(2.) This opinion is reciprocal. B thinks that A's measurements on A's system are too great.

(3.) Similarly for times; each observer thinks that the other's clocks have a slower rate than his own, so that B's durations of time appear shorter to B than to A, and conversely.

(4.) Events which appear simultaneous to A do not in general appear so to B, and conversely.

(5.) Lengths at right angles to the direction of motion are unaffected.

(6.) These efforts vary with the ratio of the relative velocity to that of light. The greater the relative velocity, the greater the effects. They vanish if there is no relative velocity.

(7.) For ordinary velocities the effects are so small as to escape notice. The remarkable point, however, is their occurrence rather than their magnitude.

(8.) The observers similarly form different estimates of the velocities of bodies on each other's systems. The velocity of light, however, appears the same to all observers.

Taking into account these revised views of lengths and times, the mechanical principle of relativity may be extended to physical laws generally as follows: *All unaccelerated frames of reference are equivalent for the statement of the general laws of physics.* In this form the statement is called the Special, or Restricted, Principle of Relativity, because it is restricted to unaccelerated frames of reference.

The Four Dimensional Continuum.

Lengths and times, therefore, have not the absolute character formerly attributed to them. As they present themselves to us they are relations between the object and the observer which change as their motion relative to him changes. Time can no longer be regarded as something independent of position and motion, and the question is what is the reliability? The only possible answer is that objects must be regarded as existing in four dimensions, three of these being the ordinary ones of length, breadth, and thickness, and the fourth, time. The term "space" is applicable only by analogy to such a region: it has been called a "continuum," and the analogue of a point in ordinary three-dimensional space has been appropriately called an "event." By "dimension" must be understood merely one of four independent quantities which locate an event in this continuum. In the nature of the case, any clear mental picture of such a continuum is impossible; mankind does not possess the requisite faculties. In this respect the mathematician enjoys a great advantage. Not that he can picture the thing mentally any better than other people, but his symbols enable him to abstract the relevant properties from it and to express them in a form suitable for exact treatment without the necessity of picturing anything, or troubling whether or not the properties are those on which others rely for their conceptions.

Gravitation and Acceleration.

The limitation of statements of general law to uniformly moving systems is hardly satisfactory. The very concept of general law is opposed to the notion of limitation. But the difficulties of formu-

RELATIVITY.

A great percentage of our wide circle of readers are technical men, so that Professor Einstein's Theory of Relativity will be familiar to them; those less fortunate readers interested in science will benefit by a study of Mr. Bolton's Prize Essay on Professor Einstein's book. Because it is a little known subject, because it has limitless applications, and because it challenges hitherto accepted natural laws, is our reason for publishing the winning essay. A limit of 3,000 words was placed upon the essay, and it is pleasing to know that an Englishman, Mr. L. Bolton, of the Patent Office in London, has been awarded the £5,000 prize from amongst thousands of competitors scattered over the world.

Relativity: What Is It?—

lating a law so that the statement of it shall hold good for all observers, whose systems may be moving with different and possibly variable accelerations, are very great. Accelerations imply forces which might be expected to upset the formulation of any general dynamical principles, and besides, the behaviour of measuring rods and clocks would be so erratic as to render unmeaning such terms as rigidity and measured time, and therefore to preclude the use of rigid scales, or of a rigid frame of reference which is the basis of the foregoing investigation.

The following example taken from Einstein will make this clear, and also indicate a way out of the difficulty. A rotating system is chosen, but since rotation is only a particular case of acceleration it will serve as an example of the method of treating accelerated systems generally. Moreover, as it will be seen, the attribution of acceleration to the system is simply a piece of scaffolding which can be discarded when the general theory has been further developed.

Let us note the experiences of an observer on a rotating disc which is isolated so that the observer has no direct means of perceiving the rotation. He will therefore refer all the occurrences on the disc to a frame of reference fixed with respect to it, and partaking of its motion.

He will notice as he walks about on the disc that he himself and all the objects on it, whatever their constitution or state, are acted upon by a force directed away from a certain point upon it and increasing with the distance from that point. This point is actually the centre of rotation, though the observer does not recognise it as such. The space on the disc, in fact, presents the characteristic properties of a gravitational field. The force differs from gravity as we know it by the fact that it is directed away from, instead of toward, a centre, and it obeys a different law of distance, but this does not affect the characteristic properties that it acts on all bodies alike, and cannot be screened from one body by the interposition of another. An observer aware of the rotation of the disc would say that the force was centrifugal force; that is, the force due to inertia which a body always exerts when it is accelerated.

Another Example.

Next suppose the observer to stand at the point of the disc where he feels no force, and to watch someone else comparing, by repeated applications of a small measuring rod, the circumference of a circle having its centre at that point, with its diameter. The measuring rod when laid along the circumference is moving lengthwise relatively to the observer, and is therefore subject to contraction by his reckoning. When laid radially to measure the diameter this contraction does not occur. The rod will therefore require a greater proportional number of applications to the circumference than to the diameter, and the number representing the ratio of the circumference of the circle to the diameter thus measured will, therefore, be greater than 3.14159+, which is its normal value. Moreover the relative velocity decreases as the centre is approached, so that the contraction of the measuring rod is less when applied to a smaller circle; and the ratio of the circumference to the diameter, while still greater than the normal, will be nearer to it than before, and the smaller the circle the less the difference from the normal. For circles whose centres are not at the point of zero force the confusion is still greater, since the velocities relative to the observer of points on them now change from point to point. The whole scheme of geometry as we know it is thus disorganised. Rigidity becomes an unmeaning term, since the standards by which alone rigidity can be tested are themselves subject to alteration. These facts are expressed by the statement that the observer's measured space is non-Euclidean: that is to say, in the region under consideration measurements do not conform to the system of Euclid.

The same confusion arises in regard to clocks. No two clocks will in general go at the same rate, and the same clock will alter its rate when moved about.

The General Principle of Relativity.

The region therefore requires a space-time geometry of its own, and be it noted that with this special geometry is associated a definite gravitational field; and if the gravitational field ceases to exist, for example if the disc were brought to rest, all the irregularities of measurement disappear, and the geometry of the region becomes Euclidean. This particular case illustrates the following propositions which form the basis of this part of the theory of relativity:

(1.) Associated with every gravitational field is a system of geometry, that is, a structure of measured space peculiar to that field.

(2.) Inertial mass and gravitational mass are one and the same.

(3.) Since in such regions ordinary methods of measurement fail, owing to the indefiniteness of the standards, the systems of geometry must be independent of any particular measurements.

(4.) The geometry of space in which no gravitational field exists is Euclidean.

The connection between a gravitational field and its appropriate geometry suggested by a case in which acceleration was their common cause is thus assumed to exist from whatever cause the gravitational field arises. This of course is pure hypothesis, to be tested by experimental trial of the results derived therefrom.

Gravitational fields arise in the presence of matter. Matter is therefore presumed to be accompanied by a special geometry, as though it imparted some peculiar kink or twist to space which renders the methods of Euclid inapplicable, or rather we should say that the geometry of Euclid is the particular form which the more general geometry assumes when matter is either absent or so remote as to have no influence. The dropping of the notion of acceleration is, after all, not a very violent change in point of view, since, under any circumstances, the observer is supposed to be unaware of the acceleration. All that he is aware of is that a gravitational field and his geometry coexist.

Gaussian Co-ordinates.

The prospect of constructing a system of geometry which does not depend upon measurement may not at first sight seem hopeful. Nevertheless this has been done. The system consists in defining points not by their distances from lines or planes (for this would involve measurement) but by assigning to them arbitrary numbers which serve as labels bearing no relation to measured distances, very much as a house is located in a town by its number and street. If this labelling be done systematically, regard being had to the condition that the label-numbers of points which are close together should differ from one another by infinitesimal amounts only, it has been found that a system of geometry can actually be worked out. Perhaps this will appear less artificial when the fact is called to mind that even when standards of length are available no more can be done to render lengths of objects amenable to calculation than to assign numbers to them, and this is precisely what is done in the present case. This system of labelling goes by the name of "Gaussian co-ordinates" after the mathematician Gauss who proposed it.

Space-time Continuum.

It is in terms of Gaussian co-ordinates that physical laws must be formulated if they are to have their widest generality, and the general principle of relativity is that *all Gaussian systems are equivalent for the statement of general physical laws.* For this purpose the labelling process is applied, not to ordinary space, but to the four dimensional space-time continuum. The concept is somewhat difficult, and it may easily be aggravated into impossibility by anyone who thinks that he is expected to visualise it. Fortunately, this is not necessary; it is merely one of these irrelevancies to which those who are unaccustomed to think in symbols are liable.

Gravitation Stands Pre-eminent.

It will now be seen that among physical laws the law of gravitation stands pre-eminent, for it is gravitating matter which determines the geometry, and the geometry determines the form of every other law. The connection between the geometry and gravitation is the law of gravitation. This law has been worked out, with the result that Newton's law of the inverse square is found to be approximate only, but so closely approximate as to account for nearly all the motions of the heavenly bodies within the limits of observation. It has already been seen that departure from the Euclidean system is intensified by rapidity of motion, and the movements of these bodies are usually too slow for this departure to be manifest. In the case of the planet Mercury the motion is sufficiently rapid, and an irregularity in its motion which long puzzled astronomers has been explained by the more general law.

Another deduction is that light is subject to gravitation. This has given rise to two predictions, one of which has been verified. The verification of the other is as yet uncertain, though the extreme difficulty of the necessary observations may account for this.

Since light is subject to gravitation, it follows that the constancy of the velocity of light assumed in the earlier part of this paper does not obtain in a gravitational field. There is really no inconsistency. The velocity of light is constant in the absence of gravitation, a condition which unaccelerated motion implies. The special principle of relativity is, therefore, a limiting case of the general principle.—*Scientific American.*

Next Thursday.

The annual Spring Number of *The Motor Cycle*.

The London-Land's End Run.

Can Porlock be climbed at 18 m.p.h.? This subject, ventilated in *The Motor Cycle*, has aroused great interest. Last week quite a number of competitors were seen practising on the gradient.

Honour.

To win a gold medal in this year's London-Land's End will be proof indeed of fine riding on a fast and reliable machine. It will be an award worth the winning.

Oil Coming Down.

Pennsylvanian oil has been further reduced in price from $3.75 to $3.00 per barrel, against $6.10 per barrel three months ago. Before long the prices of paraffin and petrol must be affected.

Teams in the Two-day Trial.

Already more than fifty entries have been received for the Western Centre A.C.U. Two-day Trial. Many clubs are entering teams, and it is expected that all team prizes will be keenly competed for.

Radial Engines.

Will the radial engine become popular on motor cycles? This type of engine seems to be engaging the attention of designers, and as a type appears to offer certain advantages over the four-cylinder type. On page 285 we illustrate an interesting design embodying this type of engine.

Dazzling Lamps on Motor Cars.

It has been suggested (says *The Autocar*) that the regulations which will govern the head lamps of the future will limit the beam of light so that it shall not rise above a certain point, the idea being that it will never rise above the shoulder level of pedestrians. In America certain restrictions as to the height of the beam have been in force for some time; and, to judge from the lamps on American cars subject to these restrictions, they have not been at all successful.

The Motor Cycle Industry.

The Illustrated Buyers' Guide, which will be one of the features of next Thursday's enlarged Spring Number, will convey a good idea of the immensity of motor cycle industry in this country.

Random Jottings.

The Autocar recently contained some amusing new Euclid elements. A *plane figure* is described as an hotel bill; an *obtuse angle* is so called by the driver who has failed to negotiate it "in one." A *circle* is the figure described by the motorist who lacks the bump of locality.

Getting Ready for the Road.

Those thinking of purchasing a road map will do well to obtain the list of maps issued by the publishers of *The Motor Cycle*, 20, Tudor Street, London, E.C.4. One set of three is specially prepared for motor cyclists and costs 5s. 6d. (5s. 9d. post free) in waterproof case. One of the maps is unique in character, and distinctly shows not only how to get into or out of London, but also how the Metropolis may be avoided. In addition to the motor cyclist's set, there are many others which will be even more useful to him at a slightly extra cost.

PICKNICING IN WINTER.

This photograph was taken during a week-end in February, and eloquently demonstrates the remarkable weather conditions of last month. Motor cyclists by the thousand took advantage of the brilliant sunshine, the main roads being as thronged as in the summer time.

ACCELERATION TEST IN THE COLMORE CUP TRIAL.
F. A. Watson (3½ Sunbeam sc.), followed by H. R. Lane (2¾ Levis), in the slow section on Saintsbury Hill.

London-Land's End.

Trial riders like a difficult task. As a result of our recent comments on the severity of the Porlock-Lynton section of the London-Land's End trial, there are over 200 entries. Our criticisms acted as an incentive to those hesitating about entering.

Incidentally, the machine used by Mr. W. H. Wells, who covered the Porlock-Lynton section with time in hand, as mentioned last week, was a 7-9 h.p. Indian sidecar.

The A.C.U. Annual General Meeting.

The annual general meeting of the Auto-Cycle Union will be held at the Royal Automobile Club to-morrow (Friday) evening, March 11th, at 6 p.m. Immediately after this meeting it is proposed to hold a meeting of the three centres converging on London, and motor cyclists living in those centres are specially requested to attend.

Coming Events—?

"The disappearance of the Ministry of Transport may involve serious and important drastic alterations in existing motor law, particularly as concerns business motor traffic," says *Motor Transport*, "for not only the Ministry of Transport Act, but the Roads Act, is essentially based on the existence of the Ministry of Transport organisation."

High Speeds in America.

E. Walker (7-9 Harley-Davidson) won all the events on February 22nd at Fresno, California, U.S.A., averaging over 100 m.p.h. in various short distance races.

According to the telegram received from the Harley-Davidson Company's works, these times are faster than the existing world's records. The time for the mile was 33⅖s. These records will doubtless receive the attention of the F.I.C.M. in due course.

Antipathy.

A meeting of the Llandaff and Dinas Powis Rural District Council was held on Wednesday of last week, when a letter was read from the Cardiff Motor Cycle Club asking for permission to hold its hill-climb on Rhubina Hill. One of the Council said that this traffic caused endless damage to the roads. Motor cycles were a distinct danger to the public, and he hoped that permission would not be granted. Another member agreed, and pointed out that if he were caught horse-racing he would be prosecuted. The Chairman expressed the hope that the application would be granted; but on going to the vote it was refused by five votes to three.

The Second-hand Show.

We learn from Mr. William Glass, Walter House, Bedford Street, Strand, London, W.C.2, organiser of the Second-hand Automobile and Motor Cycle Show to be held from April 4th to 16th, that a reduction has been made in the entry fees to the exhibition. Motor cycles will be charged 5% on the first £40 and 1¼% on the balance, minimum 40s., while sidecar outfits will be charged 5% on the first £60 and 1¼% on the balance, minimum 60s. These entry fees include show space, publication of specification, expert examination, road trial (if any), certificate, insurance against fire, and polishing and cleaning of exhibit during the show.

LONDON-LAND'S END ENTRIES.

THE following is a complete list of motor cycle entrants for the M.C.C. London-Land's End Trial, which takes place on Friday, March 25th, and Saturday, 26th. Seventy-nine solo riders and sixty-four sidecars, also seventy-two runabouts and cars, will compete.

SOLO MOTOR CYCLES.

T. S. Sharratt (4 Indian Scout)
F. A. Longman (3½ Ariel)
P. W. Moffat (3½ Douglas)
E. A. Wright (2¼ Diamond)
Harold Karslake (8 Brough Superior)
H. J. Seale (4 Scale)
V. Olsson (3½ Sunbeam)
H. F. Edwards (2¾ Coulson-B)
R. B. Clark (2¾ Coulson-B)
G. E. Stacey (2¾ Verus)
S. Dunford (2¾ Verus)
C. A. McKeand (4 Harley-Davidson)
H. R. Milling (8 Zenith)
R. M. Knowles (3½ Norton)
J. G. Goodenough (3½ Norton)
E. Pond (4 Triumph)
N. S. Brooker (3½ Sunbeam)
S. J. Marks (4 Triumph)
C. Wilson (4½ Quadrant)
P. Street (3½ Sunbeam)
A. Ellison (6 Zenith)
C. F. Plowman (4 Triumph)
F. Notari (4 Triumph)
E. J. Anderson (3¾ Scott)
E. Atkins (3½ Ariel)
J. A. Hoult (3¾ Scott)
B. J. Sims (4 Triumph)
J. Harrison (2¾ Connaught)
S. T. Ashby (2¾ Connaught)
S. G. Wooldridge (4 Omega)
R. T. Leather (3½ N.U.T.)
J. Wallis (8 Reading-Standard)
A. C. Rhodes (3½ N.U.T.)

V. Pentlow (4¼ B.S.A.)
R. Garey (8 Blackburne)
H. H. Saddington (6 James)

A CLASSIC MIDLAND EVENT.

The Sutton Coldfield and North Birmingham A.C. Colmore Cup Trial.

A certain amount of grease made the lower part of Rising Sun somewhat tricky. A. H. P. Pehrson (4½ Dunelt sc.) and T. J. Ross (8 Matchless sc.) crossing this section.

ALTHOUGH not one of the A.C.U. thirty open trials, the Colmore Cup event attracted no fewer than 158 entries. Many were machines which are not yet familiar to the general run of trials spectators. Among the new comers were two-strokes such as the Cedos, Dunelt, the sports model New Hudson, the Sturmey-Archer geared Levis, the 3 h.p. Ivy and sidecar, and a new Excelsior model; and amongst the four-strokes must be mentioned the Brough Superior, 5 h.p. Lea Francis, Elve, Federation, and Cotton. Two New Hudson three-wheelers made their first public appearance in Midlands competitions, and had as rivals a Coventry Premier, two T.B.'s, a G.N., and several Morgans.

The well-known Midlands test route was followed from Stonebridge, and competitors were fortunate in having ideal conditions; in fact, all the hills were in unwontedly good condition, better in fact than was expected by those competitors on sidecars who fitted Parsons non-skid chains.

From the start through Kenilworth, Warwick, Stratford-on-Avon to Saintbury, the roads are level, and the trial was a mere procession, though many competitors arrived so early at Saintbury that the officials in charge of the flexibility test were unready, and one at least passed on without waiting to be timed.

Here the Mobile cyclettes had to be pushed; Keeley (4¼ James sc.) stopped, but almost immediately got away again under his own power: F. Wilkinson (2¼ Cedos), single gear, failed just on the summit, as did J. Orford (2¾ New Imperial) and P. Yates on one of the New Hudson three-wheelers; and W. Ridley, on the other New Hudson cycle car, came up well, but with his passenger perched on the front mudguard, tinkering with the carburetter.

The remaining 140 riders made clean ascents. Eric Williams, on an overhead-valved 2¾ h.p. A.J.S., was very fast—but—both on the slow and fast stretches!

G. S. Davidson (2¼ Levis) also took the slow portion at a fair bat, probably on account of his single gear. The following showed exceptional accelerative powers:

A 4½ h.p. Ariel sidecar, driven by T. Peck, attacking the steepest pitch of Rising Sun (Gambles Lane).

A Classic Midland Event.—

G. Dance (3½ Sunbeam), B. Kershaw (2¾ Verus), H. Newey (2¼ Levis), G. W. Walker (3½ Norton), L. Newey (6-7 Ariel sc.), E. F. Cope (7-9 Indian), W. Brandish (5-6 Rover sc.), L. S. Horton (8 New Imperial sc.), J. H. Walker (4½ B.S.A.), R. W. Duke (4 Triumph), A. W. Thrush (4 Triumph), A. Thom (7-9 Harley-Davidson sc.), L. Crisp (4½ Humber), R. Harveyson (4 Indian Scout), G. Brough (8 Brough Superior sc.), and W. Hall (1915 3½ Sunbeam).

The descent of Willersey provided an opportunity for deciding on the best path amongst the loose stones for the return journey, and thenceforward all was plain sailing through Broadway to Winchcombe, where the route turned sharp left up Sudeley Hill.

Steady Driving.

Many chose the course of making a steady ascent with plenty of power in hand, and it is therefore difficult to pick out the star performances. All four of the 5-6 h.p. Rover outfits climbed fast and quietly. Triumphs, Nortons, B.S.A.'s, and Ariels mostly elected to climb steadily with obviously plenty of power in reserve. There were few failures, but the two Mobile Cyclettes which reached this stage were solemnly pushed up the long hill. Harry Reed (3½ Dot), who had suffered considerable belt trouble, retired on the lower slopes. L. Newey (5-6 Ariel sc.) came up very fast, and, though his belt pulley fractured, he finished in style.

Noticeably quiet were the A.J.S. sidecar outfits, the new Lea-Francis, the Scotts, and Humbers. The smaller machines mostly made fine climbs; the Levis, Cedos, Excelsior, Neal-Dahn, O.K., Verus, Beardmore-Precision, and Allon were noticeably excellent. The 5-6 h.p. El-ve sc., driven by C. R. Little, Eric Williams (2¾ A.J.S.), L. S. Horton (8 New Imperial sc.), W. H. Carson (8 Excelsior sc.), and H. F. S. Morgan (Morgan) made fast climbs, while George Brough (8 Brough Superior sc.) made a fast touring ascent, without undue throttle opening. Morgans, T.B.'s, New Hudsons, G.N.'s made good steady climbs. On the rutty section which followed there was a certain amount of minor trouble. The 5 h.p. Lea-Francis and the Coventry Premier both had plug trouble, and though the former carried on, only just failing on Rising Sun, the latter failed to check in at the lunch stop. The first man checked in at Cheltenham at eleven o'clock.

Gambles Lane (or Rising Sun) was the "Waterloo" of quite a few, but the real opportunity of many more to show their full worth. J. N. Roberts (3 A.B.C.) slid over the top with consummate ease; A. Woodfield (4¼ James sc.) just got over, as did R. Potter on a similar outfit. H. S. Nokes (2¾ Dalton) footed. T. Silver (4½ Quadrant sc.) roared over the top, and C. Ramstedt (2½ Cotton) found the gradient too much for him. Rex and Acme outfits all climbed well, though Glendinning had wheel slip at the foot. Watson Bourne's 2¾ h.p. Blackburne made a star climb, and all the little Levises excelled themselves, particularly G. Davison, whose little single-geared mount rushed up to the last pitch so fast that he was forced to cut out. New Imperial, Matchless, Rover, Excelsior, A.J.S., B.S.A., Sunbeam, Norton, El-ve, and Ariel sidecar outfits made uniformly good ascents, though perhaps the star performances in this class were those of A. Thom (7-9 Harley-Davidson sc.), L. S. Horton (8 New Imperial sc.), G. Brough (8 Brough Superior sc.), L. L. Sealy (4¼ B.S.A. sc.), S. Wright (4½ Humber sc.), and the single-cylinder Sunbeams and sidecars, whose performance was notable throughout.

F. J. Price (2¾ Diamond) showed up particularly well, and amongst the soloists who were especially noticeable were R. Grindlay (3 A.B.C.), G. Dance (3½ Sunbeam Sports), E. Walker (2½ Excelsior), B. Kershaw (2¾ Verus), P. Pike (2¼ Levis), H. Newey (2½ Levis), C. L. Hull (2¼ Levis), L. Guy (2¾ Scott), E. Williams (2¾ A.J.S.), W. H. Hassal (3½ Norton), F. Goodman and E. Cope (7-9 Indians), H. Cranmore (3¾ Scott), L. Paynter (3½ Norton), W. Smith (2¼ Connaught), R. C. Cooper and L. Clulee (Alldays Allon), N. Hall and W. Handley (2¼ O.K.), H. Payne (3 Enfield), R. Duke (4 Triumph), H. Greaves and T. Watson (3½ Beardmore Precision), H. T. Willis (3½ Norton), J. Allen (3 Neal Dahn), L. Crisp (4½ Humber), R. Harveyson (Indian Scout), H. F. S. Morgan's Morgan and the G.N. Both made very fine climbs. The next item of interest on the return journey was Sudeley hairpin.

Tricky Cornering.

Considering the dry and firm surface, it is surprising that nearly twenty failed, half that number coming hopeless croppers.

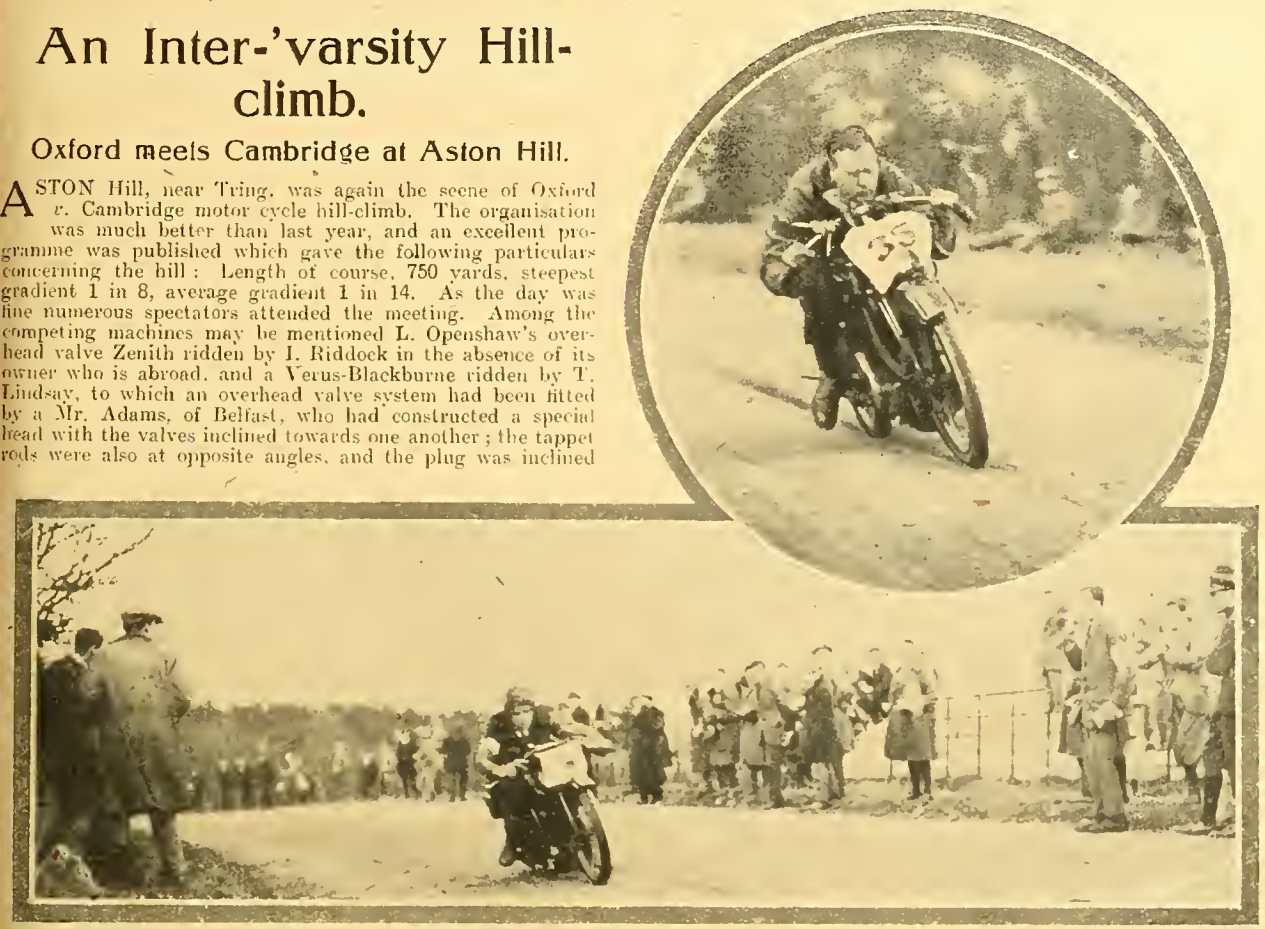
Three riders tied for the most spectacular showing here. Failing to pull his big Matchless outfit round quickly enough, T. J. Ross forced his front wheel round to the left, and made a complete turn, and was on his way, non-stop. G. Brough came round in a series of hair-raising jerks, almost twice as fast as any other three-wheeler. And, thirdly, the G.N. surprised everybody by making a clean and fast turn in spite of its long wheelbase.

H. F. S. Morgan—and, in fact, all the Morgans—made no mistake this year, but both T.B.'s got into difficulties.

Several who had been doing well previously met their fate here, including F. Arbuckle (4½ Humber sc.) who touched with his foot. J. E. Greenwood (3½ Sunbeam sc.), who also touched; G. W. Walker (3½ Norton) and A. H. Stubbs (4¼ B.S.A.) both fell. Others to lose marks included H. L. Burley (2¾ Marloe), F. Wilkinson (2¼ Cedos), H. R. Payne (2¾ Enfield), J. H. Watson (3 Beardmore), T. C. Thacker (4¼ B.S.A.), J. Allen (3 Neal Dahn), W. Tongue (3½ Rover sc.), and H. Russell (8 Brough Superior).

Deserving of special mention are S. H. Brand (4 Indian Scout), Newman (3 Ivy sc.), G. Dance (3½ Sunbeam), C. H. Hanwell (2¼ Cedos), T. F. Blumfield (6 Ariel sc.), T. F. Watson (4 Norton sc.), R. A. Wright (4 Triumph), R. Harveyson (4 Indian Scout), C. P. Wood (3¾ Scott), and G. Kuhn (2¼ Verus).

Willersey Hill was too easy to cause further failures, and the homeward trip was made over the outward route in the reverse direction, a large crowd welcoming the competitors at the finish.



Sudeley Hill was in fine condition, and the competitors "toured" up, like T. G. Amphlett (5-6 James sc.) and F. Begley (4 Dalton sc.), who are here shown.

An Inter-'varsity Hill-climb.

Oxford meets Cambridge at Aston Hill.

ASTON Hill, near Tring, was again the scene of Oxford *v.* Cambridge motor cycle hill-climb. The organisation was much better than last year, and an excellent programme was published which gave the following particulars concerning the hill: Length of course, 750 yards, steepest gradient 1 in 8, average gradient 1 in 14. As the day was fine numerous spectators attended the meeting. Among the competing machines may be mentioned L. Openshaw's overhead valve Zenith ridden by I. Riddock in the absence of its owner who is abroad, and a Verus-Blackburne ridden by T. Lindsay, to which an overhead valve system had been fitted by a Mr. Adams, of Belfast, who had constructed a special head with the valves inclined towards one another; the tappet rods were also at opposite angles, and the plug was inclined to the centre of the combustion head. The competition started late, but the first class was run off smartly until the crowding of the spectators at one of the corners caused some delay before the course was cleared. Most of the competitors complained of the road surface, which caused many a wobble at high speeds.

OXFORD AND CAMBRIDGE HILL-CLIMB.

I. P. Riddock (Oxford) making fastest time of the day on a Zenith. (Inset) A speed impression of G. E. G. Harwood (Oxford) on his Sunbeam.

The competitors were members of the University Motor Cycle Clubs, and had to be members in residence at either of the Universities. Each solo machine could be ridden twice up the hill, the best time of the machine counting in any class for which it was eligible. Entrants who were eligible for the 600 c.c. sidecar class were also eligible for a place in the unlimited sidecar class. Five marks were given for a first place, three for a second, and one for a third, and two for the fastest time of the day. The first four groups were run off, and then contested again, so that each solo mount had two attempts. In Group 1, I. Riddock, mounted on the famous Zenith, made the fastest time of the day.

In addition to the medals presented to the winners in each class, Oxford wins a cup value fifteen guineas, presented by the Motor Cycle Manufacturers' Union, which was represented at the event by the chairman, Mr. W. G. Bower.

The results of the climb were as follows:

	Marks. Cantab.	Oxon.
UNLIMITED CLASS.		
1. I. P. Riddock (8 Zenith), 30 sec.	–	7
2. P. G. Kennedy (3½ Norton), 31.8 sec.		–
3. A. O. Saunders-Davies (7 Indian), 32.4 sec.	1	–
600 C.C.		
1. P. G. Kennedy (3½ Norton), 31.8 sec.	–	5
2. C. Moser (4 Triumph), 34 sec.	3	–
3. S. J. Bassett (3½ Norton), 34.6 sec.	1	–
800 C.C.		
The results of the 600 c.c. Class also counted in the larger class, as they remained unbeaten	1	5
500 C.C.		
1. P. G. Kennedy (3½ Norton), 31.8 sec.	–	5
2. S. J. Bassett (3½ Norton), 34.6 sec.	3	–
3. J. J. Cruikshank (3½ Norton), 34.9 sec.	1	–
350 C.C.		
1. T. G. Lindsay (2⅞ Verus), 37.3 sec.	–	5
2. C. A. McKeand (2¾ New Imperial), 43.1 sec.	3	–
3. F. Sefton-Jones (2¾ New Imperial), 55.5 sec.	1	–
600 C.C. SIDECARS.		
1. O. G. Smart (3½ Norton), 51.2 sec.	5	–
2. J. G. Goodenough (3½ Norton), 54.2 sec.	3	–
3. C. A. S. Parker (Indian Scout), 54.6 sec.	–	1
UNLIMITED SIDECAR CLASS.		
1. I. P. Riddock (8 Zenith), 35.3 sec.	–	5
2. O. G. Smart (3½ Norton), 41.2 sec.	3	–
3. G. A. Jenkin (7-9 Harley), 41 sec.	1	–
The Car Class scored 5 marks for Cambridge and 4 marks for Oxford	5	4
	31	40

ECHOES OF THE COLMORE CUP TRIAL.

D. S. Heather (6 B.S.A. sc.) had tyre trouble near Cheltenham, and had to change a wheel.

Wheel slip caused a certain amount of trouble at the foot of Gambles Lane. P. S. Platts (6 A.J.S. sc.) and H. W. Glendinning (8 Rex sc.) being among the unfortunates.

F. Begley (4 Dalton sc.) had a chocked jet which caused a failure on the last few yards of Gambles Lane, and a stop immediately afterwards for cleaning purposes.

Handley's little O.K. finished for about thirty miles on a flat tyre, the tube working out and depositing rubber all over the wheel and rear frame.

F. W. Applebee had a loose footrest which chose to come adrift at a most awkward moment on the Sudeley hairpin.

G. Davidson is to be congratulated on bringing a single-geared Levis through the trial, in spite of a flat tyre for most of the homeward journey.

PORLOCK-LYNTON AT 19·4 M.P.H.?

Is the Timed Section on the London-Land's End Safe or Possible?

AMONGST competition riders the all-engrossing topic of the moment is the possibility of complying with the regulations regarding the Porlock-Lynton section in the forthcoming London-Land's End run at Easter.

It will be recollected that the competitors are required to climb the first three miles out of Porlock village in ten minutes, while the total distance of twelve miles from Porlock village to the top of Lynton hill (including the descent of Countisbury) will have to be accomplished at 19.4 m.p.h. if strict time-keeping is observed. From our own knowledge of the district we asserted in our issue of February 24th last that it was almost impossible for any but the most powerful machines under the best conditions of road and traffic to attain these speeds, while those which could do so would be complying with the regulations only at grave risk to themselves and to others using certain sections of the road at the time. Our comments have been termed unjustified in certain quarters; but the vast majority appear to agree with our views. The interest aroused is such that quite a number of intending competitors have been down to see what the Somerset and Devon terrors held in store. Last week, for instance, a party mounted on 10 h.p. Singer cars (and including members of *The Autocar* and *The Motor Cycle* staffs) went to test the criticism by a practical trial.

Porlock itself was found to be in excellent surface condition, albeit a gentle rainfall soon moistens the red clay surface, which is soon churned up.

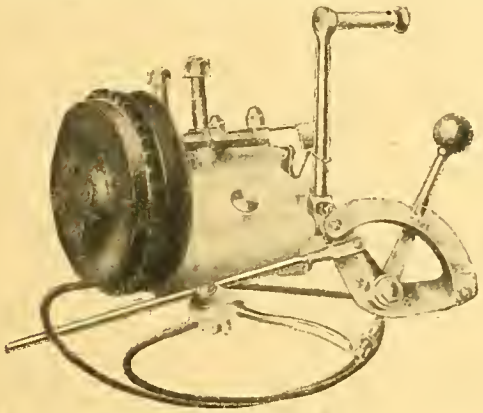
The Debatable Section.

The gradient of Porlock is worst between the first and second bends, and for any touring machine to accomplish the distance in ten minutes is manifestly a tough proposition. It is doubtful whether any solo machine of 350 c.c. or less or any 500 c.c. sidecar could do it, while the larger machines will be dependent upon freedom from baulking. Actually, one of the cars above mentioned made the three-mile climb in twelve minutes; and its speed could not have been improved in any way. From the three-mile mark to the top of Lynton was next done at the highest speed possible. The road over the moors, especially beyond the County Gate where Devon is entered, is in a bad state. Ruts are prevalent, and solo machines will have greater difficulty in maintaining their speed than the sidecars and runabouts. Down Countisbury a speed of twelve miles an hour is the limit of safety, but it was found that, despite excessive speed on the level stretches, a speed of from fourteen to fifteen miles per hour down the hill had to be maintained. It must not be forgotten that from County Gate into Lynmouth the road is narrow, and, in consequence, the normal holiday traffic, or one slow or stalled competitor, may hold up the whole procession of men who are urging their machines on to the utmost, and who will be tempted to take undue risks by dropping down Countisbury at a speed too great to permit of proper control. Lynton Hill, with its steep gradient and acute hairpin, is in bad condition. The surface has been "repaired" by a loose dressing of mixed earth and stones. Solo and sidecar machines may find a safe track for their driving wheels on the extreme off side of the road, but three and four-wheelers, especially if forced on to the inside of the hairpin, will almost assuredly suffer from wheel slip. Our exploring party found that, although the first three miles out of Porlock were not accomplished in the stipulated time, it was *just possible* to complete the twelve miles in strict time by dint of driving at a pace which was neither wise nor conducive to the well-being of the machine.

Measurements given in the Gall and Inglis "Contour" Book for Porlock are: Maximum gradient, 1 in 6; average of first mile, 1 in 8; average for first two and a half miles, 1 in 11. The ascent of Lynton is short, but the gradient is 1 in 5, while the two-mile descent of Countisbury is composed of gradients approaching 1 in 9, stiffening to 1 in 5½ at the very foot.

It must not be forgotten that in the London-Land's End run competitors are permitted to be fifteen minutes early and five minutes late without penalisation, so that by previous hard driving to get time in hand before Porlock is reached, the thirty-seven minutes' stretch may *possibly* be extended to fifty-five minutes or sixty if the permissible five are also lost. The fact remains that a competitor riding to strict schedule has an almost impossible task before him.

We reiterate that we consider the stiffening up of this section from 15 m.p.h. sections included last year will be dangerous to competitors, and that the M.C.C. will be well advised to make a last minute alteration in the rules.



HILLS IN THE LONDON-LAND'S END RUN.

The larger picture shows the severe gradient of Porlock which has to be climbed at an average of 18 m.p.h. in the M.C.C. Easter trial; the surface is now in good condition (when dry). The other picture shows the present state of Lynton Hill at the corner.

A Lightweight Three-speed Gear.

Three Gear Ratios for Popular Lightweight hitherto only Obtainable with Two.

IT has often been commented upon that, while the majority of 3½ to 4 h.p. machines are nowadays fitted with gear boxes giving three ratios, the smaller engined lightweight, more often than not, has only a two-speed box. Bearing this in mind, the designers of the 2¾ h.p. New Imperial have introduced a three-speed gear for this machine without at the same time losing the simplicity of the "two."

Exterior view of the new three-speed gear box for the popular New Imperial lightweight.

The exceptionally neat manner in which they have done this will be apparent from the accompanying diagram. Only six pinions (all in constant mesh) are used, in all, to provide the three ratios and the kick-starter mechanism. With each of the sliding pair of middle pinions is incorporated a dog clutch. These pinions are also internally splined, while the mainshaft and layshaft are both splined on alternate ends. When it is stated that the low gear layshaft pinion is free to revolve on the layshaft the principle of the box is readily understood.

In the illustration the pinions are in middle gear. Movement to the left gives a direct top drive; while similar movement to the right gives a "round the box" low ratio. Both shafts are supported on journal ball races.

The clutch is of the floating Ferodo ring type, giving a very large bearing area; manipulation is by the usual quick thread screw.

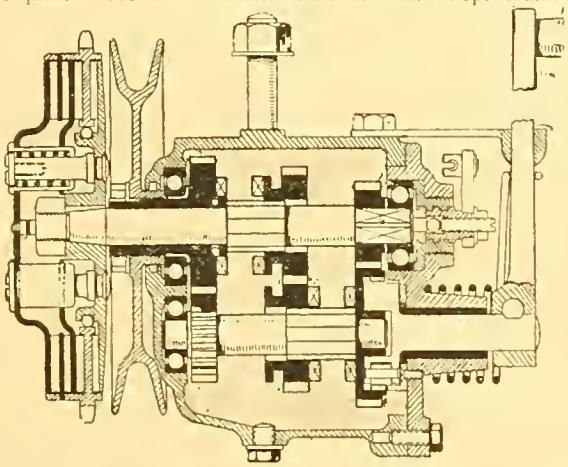


Diagram of the box, showing the simplicity of design

As already indicated, the kick-starter acts internally on the low gear pinion, a special cam throwing it out of action in the event of a backfire.

Materials, workmanship, and finish are all of a high-class order, while weight and overall width are both kept remarkably low. A plain three-speed box on the same lines, but without clutch or kick-starter, is a novelty that will appeal especially to the sporting clubman.

No extra charge is made for this new box, but, as the two-speed model is being retained, it is necessary for the customer to specify the type required, or the latter model will be supplied.

CLUB NEWS.

Coventry and Warwickshire M.C.

On Saturday, March 12th, Mr. S. Wright will act as "hare" in a paper-chase, starting at Whitley Common at 2.15 p.m.

York and District M.C.

There was a fair attendance at the York and District M.C. dinner at the Davy Hall, and a very enjoyable evening resulted.

Woolwich, Plumstead, and District M.C.

The opening meet will take place on March 13th. All local motorists are invited to attend at the Three Horse Shoes, Knockholt, Kent, at 2.30 p.m.

Lancaster and Morecambe M.C.C.

Over two hundred guests assembled for the first annual ball of the Lancaster and Morecambe M.C.C. in the Ashton Hall, Lancaster, on March 2nd. The function was a great success.

Essex M.C.

This club's annual hill-climb takes place on April 2nd. Entry forms are now available, and can be obtained from the honorary organiser, Mr. Bass, at 40, Chancery Lane, London, W.C.2. There are open classes for all types of motor cycles, and members' classes for all types of cars. Entries close on March 21st.

Sheffield M.C.C.

The N.M.C.F.U. (Sheffield branch) has been reorganised as above. There are about 150 paid-up members already for 1921 and a good programme of events. The subscription is 2s. 6d. per annum.

Leeds University M.C.

A new club has been formed by motor cyclists who are members of the Leeds University, and a comprehensive programme for the 1921 season has been arranged.

A Club for Great Yarmouth.

In pre-war days there used to be an active club in Great Yarmouth, but this apparently died during the war, and it is, therefore, intended to form a new club. Those interested should communicate with Mr. H. L. Harrison, Eastholme, 23, Euston Road, Great Yarmouth.

Scarborough and District M.C.

Staxton Hill-climb, the popular Yorkshire Easter event, will be held for the eighth time on Easter Monday. Its main features this year are a very attractive prize list and the fact that the climb is being held on time only. The hon. secretary for the event is Mr. J. W. F. Tranmer, "Glenluce," Raincliffe Avenue, Scarborough.

Wimbledon M.C.

A cordial invitation is extended to motor cyclists and light car owners residing in Wimbledon and district to become members of the above-named club. It is hoped that intending members will send in their applications as soon as possible, and that they will make it convenient to attend an extraordinary general meeting to be held at headquarters, Wimbledon Hill Hotel, on the 11th inst., at 8.15 p.m. The entrance fee is 5s., with an annual subscription of 10s. 6d. Further particulars can be obtained from Mr. J. A. Ball, hon. secretary, 84, Melrose Avenue, Wimbledon Park, S.W.19.

Brighton and Hove M.C.C.

There was a very good attendance with comparatively few entries at the hill-climb at Varncomb Hill on February 27th.

The unlimited solo class provided the tit-bit of the afternoon, the event resolving itself into a duel between Hewitt (8 Zenith) and Watts (5-6 Zenith). Both riders made an excellent climb, the former winning by ½s. Results:

CLASS 1 (Two-strokes).—C. Watts (2½ Enfield), 55⅘s.; W. Wellord (2½ Sun-Vitesse), —.

CLASS 2 (600 c.c.).—W. H. Sheraton (3½ Norton), 22⅘s.; C. Volk (3 A.B.C.), 23⅗s.

CLASS 3 (Unlimited Solo).—A. N. A. Hewitt (8 Zenith) 20s.; C. Watts (5-6 Zenith), 20⅗s.

CLASS 4 (Sidecars).—J. Chater-Lea (8 Chater-Lea sc.), 21s.; C. Farley (4 B.S.A. sc.), 41s.

Club News.—

Bradford M.C. and L.C.C.

The above club will hold the annual general meeting at its temporary headquarters, the Belle Vue Hotel, Bradford, to-day (Thursday). The president (Mr. J. E. Fearnley) will take the chair at eight o'clock prompt.

Yorkshire Centre A.C.U.

The Beverley, Halifax, and Scarborough Clubs have recently joined the Centre, bringing the total number of clubs in membership to nineteen. The Yorkshire Centre hopes shortly to welcome the Bradford Motor Cycling Gipsies, Darlington and Leeds University Clubs.

Public Schools M.C.C.

The opening run will be held on March 20th. Members will meet at the Bear Hotel, Esher, at 11.30 a.m., lunch at Wisley Hut at 1 p.m., and after lunch make a run to Newlands Corner. All past and present members of public schools are invited to be present whether members of the club or not. In order to facilitate arrangements for lunch it is hoped that members will make a point of notifying the hon. secretary, Mr. H. B. Browning, 14, Hogarth Road, London, S.W., as soon as possible.

Skipton and District M.C. and L.C.C.

There was a large attendance of motorists at the first meeting of the above club, held on Friday, 25th ult., at the Globe Restaurant, Skipton, when the committee and other officials for the year were elected. It was decided to hold the first run on March 6th to Harrogate, meeting at the Craven Garage, High Street, at 1 p.m. The coming year promises to be an interesting one, and an attractive programme will be announced by the club shortly. All motor cyclists and light car owners in the district are cordially invited to join the club, whose membership now totals over forty. Mr. J. Wilkinson, 10, Granville Street, Skipton, has been appointed as hon. secretary, to whom all communications should be addressed. The annual subscription is 10s.

Manx M.C.C.

The Manx Motor Cycle Club held their first speed trials on Thursday, February 24th, and despite blustering weather several hundreds of spectators attended. Duggie Brown, on a 3½ h.p. Norton, put up the fastest time of the day. The following are the full results :

1914 HANDICAP.

	Time in secs.	m.p.h.
H. Lay (1912 3½ Bradbury)	46	39.18

W. Lilley (2½ Hobart) ...	57	31.6
LADIES' CLASS.		
Miss W. Simmonds (3½ Triumph)	52	34.6
Miss M. R. Kerr (2¾ A.J.S.)	58	31.1

C22

North London M.C.C.

The North London Motor Cycling Club held its opening run recently when nearly one hundred members and visitors left the town headquarters *en route* for Radlett *via* St. Albans. The types of vehicles present ranged from a 1½ h.p. auto scooter to a 1921 10 h.p. Hillman light car.

Biggleswade and District M.C.

It has been decided to form a motor and motor cycling club for Biggleswade (Beds.) and district, to be called the Biggleswade and District Motor Club. A meeting was called at the Crown Hotel, Biggleswade, on February 23rd, when Messrs. H. Drysdale and G. Blake were elected joint secretaries *pro tem.*, and a working committee elected to report to another meeting as to a programme, etc. It was decided to affiliate to the A.C.U. Anyone wishing to join the club is asked to communicate with Mr. H. Drysdale, Shortmead St., Biggleswade.

Forthcoming Club Events.

Mar 12.—North Wales M.C.C. Opening Run.
Mar. 12.—Harrogate and District M.C.C. Hill-climb.
Mar. 13.—Surbiton and District M.C.C. Opening Run.
Mar. 19.—Kidderminster M.C.C. Opening Run.
Mar. 19.—Stockport and District M.C.C. Hill-climb.
Mar. 19.—Wallington and District M.C.C. Hill-climb.
Mar. 20.—Brighton and Hove M.C.C. Petrol Consumption Test.
Mar. 20.—Woolwich, Plumstead and District M.C. Inter-club Run.
Mar. 20.—West Kent M.C. Inter-club Hill-climb with Holmwood M.C.C.

IMPORTANT club and OPEN events are tabulated on the "Questions and Replies" page.

Birmingham M.C.C.

Members are requested to meet for the opening run on March 12th, at the Red Lion Hotel, Stratford Road, Shirley, at 3 p.m.

Glasgow Western M.C.C.

Held under the open competition rules of the Scottish Auto Cycle Union, a week-end trial to Carlisle and back will take place on Saturday, March 26th, and Monday, March 28th. A full award list includes the A.J.S. and Hutchinson challenge trophies, and a Maglita lighting set for the best performance by a club member private owner. Entries close on the 18th inst.

Harrogate and District M.C.C.

The 1921 programme for this club opened most promisingly with a highly successful dance and prize distribution at the George Hotel, at which Mr. G. A. Nunneley offered the club a cup to be won outright at the next event (which will take the form of a hill-climb, and will be held on March 12th). Messrs. Muratti, Sons and Co., who some time ago gave the club a magnificent shield, which has been won outright, have now replaced their gift by a solid silver vase, which has to be competed for in the annual reliability trial (June 19th). Mr. T. Haley, the club president, has also given a choice tea service, which is to be won outright in a special competition held on July 3rd.

Bath and West of England M.C.

The above club is holding a twenty-four hours' reliability trial for cars, light cars, sidecars, and motor cycles on the 11th and 12th inst. from Bath to Land's End. The return journey will be made *via* the coast.

Wallington and District M.C. and L.C.C.

The social run to the Hut Hotel, Wisley, on the 27th February, was attended by about forty members. The weather was excellent, and it is hoped that equally good weather will favour the hill-climb to be held on Bore Hill, Dorking, on Saturday, 19th inst.

Cork and District M.C.C.

Despite conditions there, particulars received from the secretary of the Cork and District M.C.C. show that the club has a paid-up membership of 120, and that the organisation is still intact, although the majority of the members must now follow the sport only on paper or in memory. Incidentally, Cork was more prompt in supplying this information than a great many more favoured clubs on this side of the water.

Liverpool M.C.

At the annual general meeting the following officials were elected for 1921 : President, Mr. S. W. Phillpott; vice-presidents, Messrs. V. E. Horsman, F. A. P. Zacharias, and H. R. Caldwell; captain (cars), Mr. E. L. Boston; captain (cycles), Mr. G. S. Boston; hon. secretary, Mr. J. H. Green; hon. treasurer, Mr. E. E. Holloway; hon. trials secretary, Mr. S. Parker; hon. auditors, Messrs. P. J. Robinson and J. H. Green; committee, Messrs. N. C. Sclater, J. E. Wilkins, H. W. Coopland, R. H. W. Brown, N. H. Brown, E. Thomas, J. Pollitt, S. V. Banner, P. Brazendale, O. A. Cubley, and G. A. Hopton.

Scarborough and District M.C.

Staxton hill-climb was cancelled last week owing to the bad condition of the hill. Now it is on the programme again, and is definitely fixed to be held on Easter Monday, as the authorities have commenced to repair the hill, and there is every prospect of good surface by Easter. In view of the circumstances, the Scarborough Club specially ask all intending competitors to cut down their practising on the hill to the minimum.

An extraordinary general meeting of the club was held on the 26th ult., at which Capt. Longfield, president of the Ilkley M.C.C., addressed the members on the subject of affiliation to the A.C.U. The chief point under discussion was the question of payment of affiliation fees on visiting or country members who are admitted to the Scarborough Club at less than half the fees for the town members.

After a lengthy discussion it was decided to affiliate to the A.C.U. (Yorks Centre), and raise the country members' annual subscription to 5s., to cover the affiliation fees. It is now understood that the Yorkshire Centre's affiliated members will give hearty support to the Staxton hill-climb. Mr. J. W. F. Trammer, Glenluce, Raincliffe Avenue, Scarborough, has undertaken the secretaryship for this event, in succession to Mr. H. L. Kettle.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every ad- itional word. Paragraphs of under 8 words re charged double rate. Each paragraph is harged separately. Name and address must e counted. Series discounts, conditions, and pecial terms to regular trade advertisers will e quoted on application.

Postal Orders and Cheques sent in payment for dvertisements should be made payable ILIFFE & SONS Ltd., and crossed & Co. reasury Notes, being untraceable if lost in ansit, should not be sent as remittances.

All advertisements in this section should be ccompanied with remittance, and be addressed the offices of "The Motor Cycle," 20, Tudor treet, London, E.C.4, or 19, Hertford Street, oventry. To ensure insertion letters should e posted in time to reach the offices of "The lotor Cycle," by the first post on Friday orning previous to the day of issue.

All letters relating to advertisements should ote the number which is printed at the end of ch advertisement, and the date of the issue which it appeared.

The proprietors are not responsible for clerical r printers' errors, although every care is taken avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be ddressed to numbers at "The Motor Cycle" Office. hen this is desired, the sum of 6d. to defray the cost of gistration and to cover postage on replies must be added the advertisement charge, which must include the ords Box 000, c/o "The Motor Cycle." Only the number ll appear in the advertisement. All replies should be ddressed No. 000, c/o "Motor Cycle," 20, Tudor Street, C.4. *Replies to Box Number advertisements containing mittances should be sent by registered post, but in all such ses it is advisable to make use of the Deposit System.*

In the case of motor cycles offered for sale under a box mber, as it is unusual for these to be sold without first ing inspected by the intending purchaser, advertisers will cilitate business by embodying in their advertisements me mention of the district in which the machine fered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons ay deal in perfect safety by availing themselves of our eposit System. If the money be deposited with "The otor Cycle," both parties are advised of this receipt. The time allowed for a decision after receipt of the ods is three days, and if a sale is effected we remit the mount to the seller, but, if not, we return the amount the depositor, and each party to the transaction pays rriage one way. For all transactions up to £10, a posit fee of 1/- is charged; on transactions over £10 d under £50, the fee is 2/6; over £50 and under £75, 5/-; er £75 and under £100, 7/6; and on all transactions er £100, ½ %. All deposit matters are dealt with at Tudor Street, London, E.C.4, and cheques and money lers should be made payable to Iliffe & Sons Limited. The letter "D" at the end of an advertisement is an dication that the advertiser is willing to avail himself of e Deposit System. Other advertisers may be equally sirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no swer to their enquiries are requested to regard the ence as an indication that the goods advertised have eady been disposed of. Advertisers often receive so any enquiries that it is quite impossible to reply to ch one by post.

ELI CLARK can give you good service both in new machines and spares; try me. I may be useful to you.—The Pioneer Agent for Douglas Motors, 196, Cheltenham Rd., Bristol. [0016

DOUGLAS 1921 2¾h.p., 2-speed, complete with lamps, horn, licence paid, used for less than 200 miles; bargain, £80.—Elco and Co., 15-16, Bishopsgate Av., Camomile St., E.C.3. [0070

DOUGLAS Late 1920 2¾h.p., new but slightly soiled, 3-speed, Model W 20; usual price, £100; our price, £89, a real bargain.—Wilkins, Simpson, opposite Olympia, London. [5490

THE Effra Motor Works.—When you have purchased a 2¾h.p. Douglas from us you have the satisfaction of knowing that our machines are entirely overhauled and worn parts renewed.—Below.

£50.—2¾h.p. Douglases, 1915-16, restored and replated, tank in makers' colours, fitted with new magnetos and 1920 Amac carburetter, new tyres, etc.; a real genuine bargain.—Below.

WHY? As we purchased the remaining entire dump of 2¾h.p. Douglases, W.D., this is the reason we are able to offer these machines at this price.—Below.

PLEASE Note that we cannot supply unrenovated 2¾h.p. Douglases.—Below.

£65.—We are now in a position to supply 4h.p Douglas solo ex W.D. machines, tanks in makers colours, miscellaneous fittings plated, new tyres and footboards, all fitted with clutch and kick start, new mags., and 1920 Amac carburetters. These machines have had very little wear, and so confident are we that you will have satisfaction, we agree to send same on approval against cash.—Below.

TO the Trade.—We are prepared to sell 4h.p. Douglases, solo and combination (in the rough), at very attractive prices. Make a point of calling upon us.—Below.

WE are in a Position to supply spares for 2¾h.p and 4h.p. Douglases, new and second-hand stock. —Below.

CHEQUES and Money Orders should be made payable to the Effra Motor Works, 14, Effra Parade, Brixton, London, S.W. [5647

PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

Don't Scrap an old Engine,

but give it a

NEW LEASE OF LIFE

by fitting the

World-famed Philipson Pulley.

Entirely Free from troublesome and weighty complications—only two working parts—no levers, rods, wheels, etc., to worry about. Simply takes the place of the ordinary pulley. One nut secures the complete gear to the engine. Can be fitted without any alterations to most direct belt-driven engines in a few minutes.

For hill-climbing it is unsurpassed. Makes mountaineering easy.

IMMEDIATE DELIVERY.

Send for Illustrated Booklet.

During the past few weeks the following machines have been fitted with PHILIPSON Pulley:

Triumph,	Arno,
Rover,	Rex,
Norton,	B.S.A.,
Douglas,	James,
Singer,	L.M.C.,
Bradbury,	Lincoln Elk,
Ariel,	N.U.T.-Jap,

Psychology of the Motor Cyclist.

ON the road the average motor cyclist is a cheerful personality, even in adversity. His youthful mind gives him the happy knack of looking on the bright side of things. Yet curiously, when he decides to express his views on paper, he is apt to become a pessimist. He will write long screeds on the iniquity of Government taxation, the terrible state of the roads, the callous behaviour of car drivers who cut him closely, and about dogs which chase him, while the current price of motor cycles is the last straw. On the other hand, it is comparatively seldom that he writes of the brighter side. However strongly he feels them, the brighter views are never committed to paper. Have we, after all, so much to grumble at? Taxation admittedly is high, and in certain cases unfair, but money had to be raised, and the one system which would be fair to all proved impracticable for reasons which the average motor cyclist did not take the trouble to understand. There remain, it is true, certain anomalies which we must all fight in order to get them straightened out before the next Budget. On the other side of the picture we have a real attempt to improve roads, both as regards width, surface, and classification. It will necessarily take a certain amount of time to repair the ravages due to war-time neglect, but signs of improvement are not lacking.

The Ministry of Transport, whatever its failings, has taken an interest in the welfare of motorists, and reasonable signposts and identification signs are promised. Manufacturers' prices are high—but the blame is not altogether on their shoulders—and several have recently been able to effect appreciable reductions. Again, the price of fuel has dropped, and shows a tendency to continue so doing. Spring is here, and those who, by reason of delicate health, have been unable to enjoy the pleasures of winter riding have the best season of the year before them in which they may enjoy all the benefits of the open road.

In spite of all the wails which are sent up at any kind of change, the motor cyclist still enjoys the most economical means of travel.

There is something encouraging in that! In many cases also he is able to save fares by putting to practical use the machine which is the source of his pleasure and sport out of business hours.

Easter Events.

NEITHER in actual participation in nor in observation of competitions does the interest of the motor cycle public appear to wane; indeed, never at any time in the history of the movement have motor cycle events, whether sporting or social, received stronger support or been more enthusiastically followed.

It does not require an elaborate pleonasm to prove that the motor cycle movement is stronger than ever it was, and keen riders may follow the Easter events in almost every part of the country. On Good Friday the north-eastern focus is the annual Richmond Meet in North Yorkshire; on the evening of the same day the 200 odd competitors start from London on the M.C.C. Land's End run, and West Country riders will be in force at Porlock and Lynton to see the performances on the Saturday.

Easter Monday provides *rendezvous* in the north-west, the East Midlands, and the north-east coast, the events being the Westmorland Hill-climb at Orton Scar, the A.C.U. North-Western Centre Rally at Ribchester, the East Midland Centre speed trials at Bourne in Lincolnshire, and the Scarborough Hill-climb at Staxton Brow. In addition to these important events, the Easter week-end is chosen for the holding of a two-day trial by the Glasgow Western Club, while closed events are being run by individual clubs in almost every district.

Each of these meetings will draw hundreds of motor cyclists, not to mention attracting the interest of the general public, from which recruits to the movement must be drawn.

An index to the advertisements in this issue will be found on page supplement ia.

OCCASIONAL COMMENTS

BY IXION

A Good Hogbus Gear.

I AM at present disporting myself on an experimental machine designed by a New Zealander (Mr. A. R. Bannister). Its main novelty is the drive, which consists of an undergeared pulley with an infinitely variable belt transmission. As far as I know, such a combination has never yet been marketed, and my first impressions are that it would be simply ideal for a fast sporting mount. In actual fact it adorns a rather heavy machine with a 2½ h.p. J.A.P. engine and a light sidecar, the designer having adopted this layout in order to demonstrate its efficiency without outraging the police of this country. Mechanically, the design is wholly unexceptionable, but in road practice two chief merits emerge into high relief.

The first—with which all road burners will sympathise—is that the gear changing is wholly performed by the feet, so that both hands are continuously available for steering, horn-blowing, throttle work, etc.—a factor of prime value in speed work. The second is that, thanks to the undergeared pulley, a large effective pulley diameter is obtained on the bottom gear of 12½ to 1. As the belt tension is automatically increased as the gear is lowered, belt-slip is almost unknown, even with the double load.

How the Gear is Changed.

THE noble army of hoggers will doubtless be interested to hear how the gear is changed. On the off side footboard there is a pedal. Depress this pedal and you lower the gear, an operation which can be performed with the 'bus stationary or in motion. In a competition if you suddenly meet an arrow which orders you to twist back to the tune of 335°, and tackle an unsuspected slope of 1 in 2, you merely stamp with your right foot, and up she goes. This pedal stays wherever it is put, being self-locking.

On the other hand, should you wish to raise the gear, your left foot gently depresses a small button on the other footboard, when the gear promptly raises itself *ad lib.*, the off side pedal rising in the operation. If you don't want the gear to come right back to top again, you either release the foot button when the desired ratio is attained, or slow down the big pedal with the other foot. Could anything be nicer?

When the inventor was driving me in the sidecar, he kept his engine revs. practically unaltered uphill and down dale for several miles, during which distance we were averaging about 30 m.p.h. with a dead-weight of some 6 cwt., propelled by a 2½ h.p. engine. The petrol consumption is correspondingly low. I long to try out this Bannister gear on a hotstuff 3½ h.p. engine, and hope that when trade picks up, we may all have the chance of using it.

Split Leggings.

THIS cross-heading may not be particularly intelligible. I referred some weeks ago to the defects of ordinary leg overalls, which are awkward to put on and take off, especially if nature has afflicted one with a weedy calf and a club foot; and which ruin your trousers in time because your boot fouls the inside of the legging. At that time I alluded with distinct appreciation to the Brooks and John Bull leggings, which eliminate all these defects. Last autumn a North-country rider introduced me to a legging which is possibly the best in its class. The leg portions are split down the sides, and are fastened by two long flat springs per leg; both ends of each spring slip into clips, and the garment can be removed in a couple of seconds. A single push-button is fitted to a flap at each kneecap, to prevent "gaping," and the workmanship is excellent. This first-rate legging is sold by Messrs. Henry and Murton, of Grainger Street, Newcastle-on-Tyne. I know of nothing to beat it, and it deserves to be better known.

Becoming Tedious?

THE other week a doctor asked me to accompany him on his morning round, citing no reason. I went. His machine was a clutchless, two-speeded baby two-stroke; mine was something much bigger and heavier with a clutch. His practice was situated in an agricultural district, and embraced two or three of those comic townlets where they hold cinemas in disused chapels. As the result of our morning, the following conclusions were arrived at:

1. A doctor *must* use a lightweight motor cycle for such a practice, because

   (*a*) A car would make his fees higher than his patients can afford, or cause a loss on the working of his "panel."

   (*b*) The handling of a big machine is altogether too exhausting, considering the frequent stoppages and the queer places into which he must go.

2. His machine *must* have a clutch. The push start is quite impracticable after some of his visits. If he has no clutch, he must leave his machine at a point of the road where a push start is possible, and waste time by walking to the farm or cottage.

3. His machine ought to have a quick-action one leg stand of the leaning prop variety. On one long climb through a wood we had to open five gates; in no case was there any natural support for the machine while the gate was being opened; the grade was too severe for us to push our mounts and open the gates

Ixion's "MOTOR CYCLE REMINISCENCES" have just been published in book form, price 5s. 3d. post free, from "The Motor Cycle" Offices, 20, Tudor Street, E.C.4.

Occasional Comments.—

simultaneously. The only plan for a solitary rider was to prop up his machine, open the gate, drive through, prop up machine, close gate, and remount.

4. In this work, as in the experience of many others, a machine often has to be left out of doors for hours—possibly all night in certain cases. Its finish, ignition, carburation, and saddle must therefore be weatherproof.

I could not suggest a machine which met all his needs; but at the risk of growing tedious I must underline the huge demand which unquestionably exists for a quick-action "prop" stand, consisting of one hinged leg on the near side of the machine.

That Retriever.

THOSE readers who are privileged to know Capt. Vinter, of the Scott Co., will be aware that he is an incorrigible leg-puller. Moreover, he has a special down on me, because I once described the petrol consumption of the Scott in terms which he considered unkind. So he now assails my infallible anti-dog recipe. Half a mile from the Scott works there resides a retriever with such a massive frame that Vinter thinks it was designed for pulling sidecars. When the retriever hears the Scott approaching he lies down on the pavement on his tummy, takes an observation of Vinter's speed, works out the deflection allowance, and leaps at the psychological moment. The Scott manager has tried my tip in vain, and has come to the reluctant conclusion that this retriever's proboscis must be seriously calloused. Am I flummoxed by this problem? Not at all. Here is my prescription—two of them, in fact. First plan. Procure a twin Scarf gun mounting from the Aircraft Disposal people. Saw off the barrels of two shotguns. Load them with buckshot. Take a short refresher course in gunnery, and act according. If the owner of the retriever is a personal friend or an influential person, here is an alternative method. Catch the dog. (Some simple stunt, such as sweeping him up in a tennis net trailed between two Scotts driven in open order, *à la* mine sweeper.) Anneal his proboscis (see tempering formulæ in any engineers' pocketbook). Then apply my original tip of pretending to throw something.

Petrol Gas Lamps.

MY recent comment on alternatives to paraffin lamps for country dwellers have evoked quite a correspondence. It seems that a number of motorists regularly use the so-called "air gas" lanterns for illuminating night jobs in their garages. ("Air gas" is simply an advertising inexactitude—it is just as much "air gas" as a motor cycle is air-propelled.) Furthermore, the Coleman Quick-lite is by no means the only pebble on the beach, for there are several other versions of the idea. They all furnish 300 c.p. and burn about forty-eight hours on a gallon of No. 1 spirit, which is cheap lighting. The hurricane pattern can be used out of doors, and if hung 8ft. from the ground will throw a bright light over about 600 sq. ft. The makers call the hurricane type a "safety" lamp. I should not be prepared to risk one in the immediate neighbourhood of petrol leakages, but it can safely be employed for night work if it is hung at a moderate height some distance away.

AN EGYPTIAN SCENE.

This attractive snapshot of little native caddies "guarding" a Triumph was taken at the Sezira Sporting Club, Cairo. Had we not been favoured with such a remarkably bright February, this sunny scene might well make one envious of the lucky individuals who can winter in Cairo.

SIDECAR OR CYCLE CAR

A Vexed Question for the Man who desires the Best Type of Passenger Machine.

SIDECARS fulfil their purpose so well that it becomes difficult to imagine that they will ever cease to score over their rivals.

In the light and mediumweight classes, indeed, the sidecar is the unchallenged passenger machine, and there is no evidence of the arrival of any type of machine to supplant it. When the heavier and more luxurious machines are considered, however, two classes of vehicles have rival claims to attention, and now that the price question is settled, in so far that almost all types are equal, the prospective purchaser is swayed between the merits of the high-powered sidecar, the three-wheeled runabout, and the four-wheeled cycle car.

An Adventitious Advantage.

Under existing legislation, the three-wheeled machines possess an initial advantage by escaping the minimum tax of £6 which burdens the four-wheeler. The difference between that figure and the £4 of the three-wheelers and sidecars represents a considerable economy in standing charges.

A person who intends investing something over £200 in a passenger machine for two people may well pause when he considers that his selection of type will give him complete protection for passenger, self, and "machinery" on the one hand, while on the other the passenger only enjoys freedom from the unpleasantness of the elements. The high-powered sidecar machines which are built as complete outfits, and which are never ridden solo, while providing extreme comfort for the passenger, still leave the driver to face the weather, still necessitate that he shall wear special clothing, and still leave the greater part of the mechanism exposed. Runabout machines, built as such, are simpler in outline, offer equal protection for driver and passenger, and a considerable amount of concealment for the major portion of the "works."

Why, then, should one pause for a moment in selecting? Has not the runabout all the advantages?

No! The sidecar outfit possesses qualities which still gain for it a wide and enthusiastic circle of users. Mechanically it is more an evolutionary product than a sound initial design, and in consequence, the heavy, powerful, and reliable outfits cannot always be built with strict economy of means, but it gives convincing results on the road, and, thanks to its enormous power compared with comparatively low weight, its extreme steering lock, narrow track, sensitive clutch, and easy changing gears, it can go where most cars would stall. The degree of comfort provided by the best sidecars is probably greater than is offered by any other road vehicle, while the adaptability of the sidecar chassis, which will permit two-seater bodies to be used, gives the sidecar outfit (with its pillion possibilities) the capability of transporting four persons with comparative ease. A final point in favour of the sidecar outfit is that the engine may be started after the driver has taken his seat.

Claims of the Cycle Car.

Most runabouts, or cycle cars, although designed on homogeneous lines, have failed as a class to equal the performance records of similarly-engined sidecar outfits. For the ordinary tourist, however, who is not interested in freak hill-climbing, the runabout machine offers an equal amount of protection for both driver and passenger. Usually the comfort is inferior to that of the sidecar, but its compensation lies in the fact that it is shared in sociability. Generally speaking, the chassis of a three or four-wheeler is simpler than the framework of a sidecar outfit, and the power and transmission units are out of sight beneath bonnet and bodywork.

General accessibility of the mechanism is usually about equal, for the cramping of parts into a small

Sidecar or Cycle Car?—

area on the motor cycle renders even exposed mechanism somewhat difficult to manipulate, while the accessibility of the cycle car's details can only be taken advantage of when the bodywork is taken away. In most cases the cycle carist who stops his engine has to climb out, disturb his passenger, and crank up at the front or side of the machine, but this process is not universal.

Lastly, and perhaps of most moment to the family man, comes the unfortunate truth that the cycle car is not very adaptable if more than its normal two passengers are to be carried. Designed for two people, it does not offer the same possibilities for additional seats as does the sidecar, and for this reason alone many would-be cycle carists, who wish to tour *en famille*, still remain faithful to the sidecar, which, speaking generally, is still the pre-eminent machine for the transport of most people the most miles at the smallest cost.

THE QUESTION OF PROTECTION.

(Left) The sidecarist who turns to the three-wheeler probably appreciates his machine more on wet days than on fine—the simple procedure of putting up the hood solves all his weatherproofing difficulties.

(Right) On the other hand, the sidecar can be made proof against water on the road, for the rider of the sidecar depicted passed through the splash without getting a spot of wet on his clothing.

(Bottom) Will the sidecar de luxe develop into a miniature coupé? The lady passenger who is desirous of being fully protected is keenly interested in this vehicle.

REMODELLING THE TRANSPORT MINISTRY.

THE work involved in the supervision of roads and road traffic calls for ability of a specific kind capable of dealing efficiently with normal conditions. "We hope," says *The Autocar*, "to see a remodelling of the Transport Ministry on a plan less grandiose than the present *régime*. The forthcoming decontrol of the railways will relieve the Transport Ministry of many duties, and open the way for reconstruction. We hope that the remodelled department will have as one of its chief concerns, and not as a mere side show, the encouragement and progress, as contrasted with the repression, of the comparatively young and virile motor movement upon which, no less than upon the older railway system, the vital interests of the community so largely depend." With this opinion we thoroughly concur.

". . . the genial, semi-cynical, completely joyous, and rather contemptuous grin."

FACIAL EXPRESSION ON THE ROAD.

One Hour at Wisley Hut. "Ixion" proves a Veritable Sherlock-Sexton-Blake-Holmes in his Deductory Notes on our Artist's Impressions of Motor Cycling Types.

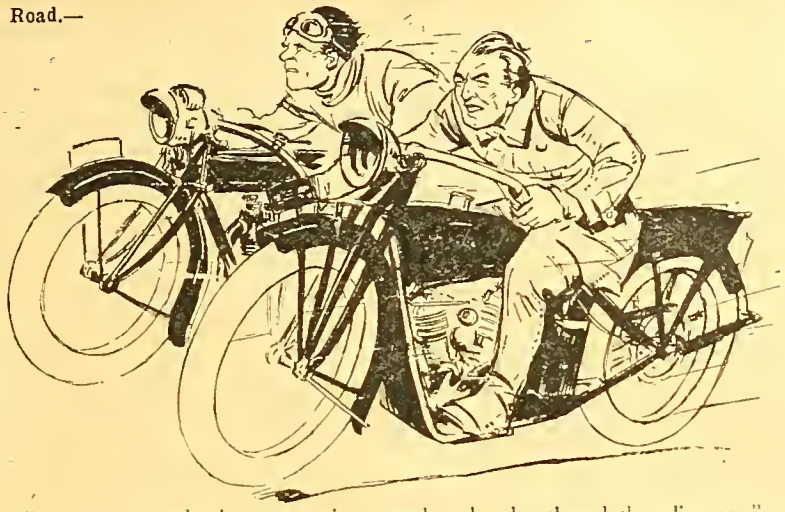
ILLUSTRATED BY HELEN McKIE.

A DOCTOR man once conscripted me into attending an illustrated lecture by some Harley Street bird who knew more about heart action than D. R. Donovan knows about valve timing. The talk was enlightened by snapshots of famous athletes both "on" and "off"—"on" being represented by photographs of them at the finish of a gruelling race, and "off" by presentments of the same men with their hair brushed and their best girls alongside.

Now 'Varsity blues are generally regular Apollos; but it is astounding what loathsome criminals they appear if snapped about Barnes Bridge in the boat race or at the tape of a fierce hundred yards at Fenner's. If filmed at rest, their faces would inspire any flapper with a week's dreams after one visit to the pictures; but when filmed in strenuous physical effort they become convulsed, distorted, formidable, horrific.

Nothing but the Truth.

It has long been suggested in certain hostile quarters that just as there is an athlete's face, so there is a special motor cycling expression which we all of us assume when we take the saddle. Some years ago the A.C.U. almost brought a libel action against some horrid rag which prated of our "wild and haggard expression." So the Editor commissioned Helen McKie to explore the Portsmouth Road one week-end to verify these scandalous rumours, with the happy results which appear amidst my notes. For a woman, Miss McKie has a judicial mind, and does not allow her brief to overbalance her. She caught one unfortunate stalled by tyre trouble; his natural irritation was apparently exacerbated by the somewhat callous aloofness of his carrier passenger.



I ask my readers whether the other eight faces which she has portrayed are not all of them redolent of various types of bliss? Look at the two pals who are scrapping as much as they dare through the police zone. Both are as jolly as sandboys. If the outside man is a trifle less abandoned to the joy of the road than the Indian fellow, the reason is obvious; when they reach the safer area west of Guildford, the big Indian engine will be opened out. Miss McKie has chosen to be enigmatic in the little sketch in the heading, but she is not too enigmatic for me. I can read from the genial, semi-cynical, completely joyous, and rather contemptuous grin under the helmet what machine would have been depicted if the artist had the room to include it. This boy has clearly just taken delivery of a Brough Superior—8 h.p., o.h.v., geared 3 to 1. He knows nobody on the Portsmouth Road can catch him; he is aware that presently some fool will try; he intends to give that poor fool a wholesome object lesson. What could be nicer?

Or take again the human little crush of five motor cyclists in another sketch, not forgetting the baby. We can place them all. Papa at the helm of the sidecar is a small tradesman from the South London district. He is a Socialist of the academic type, and rather a deadly foe at the local billiard saloon on winter evenings. I *think* he is a pawnbroker. He has no illusions left in this world, and he never had any about the next. So he is quite aware—subconsciously—that his engine may seize or his back tyre burst within the next mile. Should such a catastrophe befall him, he won't worry. He will settle down to meet the emergency in a dour, business-like way, remarking sagely to Maria, "Wot's the odds, old gel? It'll all be the syme in a 'undred years." And so it will, too. Mamma—probably christened Maria, perhaps Maria Jane—is not sniffing the pine trees or feeling good because the Japanese cherries in the villa garden have begun to look like pink snow. Not a bit of it. She had a small stout before Alf depressed the kick-starter; but that small stout is not really responsible for her somewhat fœtid expression. She heard Mrs. Jones, next door, make a rather acid remark to Mrs. Smith, the greengrocer's

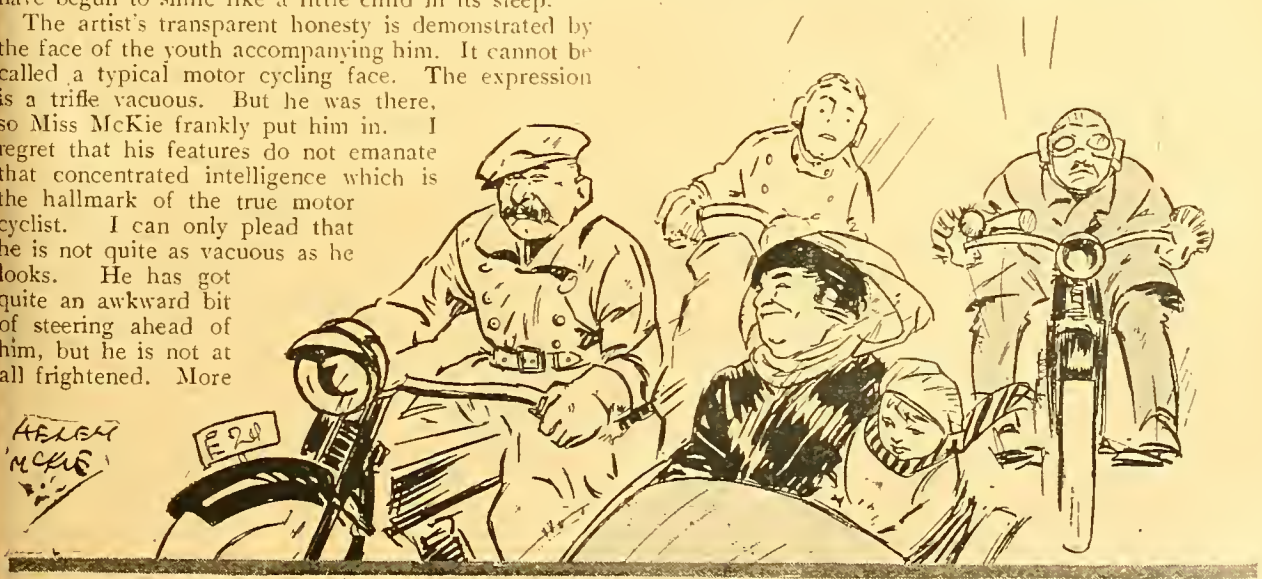
". . . his natural irritation was apparently exacerbated by the somewhat callous aloofness of his carrier passenger."

Facial Expression on the Road.—

". . . two pals who are scrapping as much as they dare through the police zone."

wife, as the outfit burbled off from the kerb; and she knows that inwardly these two ladies are terribly upset this fine Saturday afternoon because Smith and Jones cannot afford to buy sidecars, and their ladies are even now washing up amidst the haunting odour of boiled greens.

The baby? Ah, precious little innocent, we can hardly ascribe his angelic meditations to any petrolic cause. Any novel sensation would stir the same reflection of heaven on his cherubic countenance. But we may at least remark that were it not for papa's motor cycle, little Percy would probably be grubbily playing with a cod's tail in the gutter. So even here the motor cycle deserves some indirect credit.



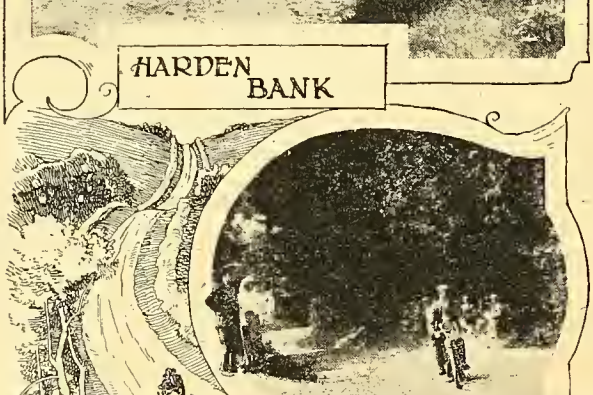
Why he didn't buy a Sidecar.

We had almost forgotten the two men who are anxious to overtake the family sidecar. It is clear that the stout man wearing goggles has an element of sourness in his composition. Do not blame the motor cycle for it. Miss McKie got him at 2.11 p.m. precisely. All married readers can expound his face like an open book. He is henpecked. It is barely an hour since he escaped from connubial bliss. The mark it leaves upon him has not yet evaporated. If Miss McKie had been able to chase him, say as far as Petersfield, those deep lines round his mouth would have been smoothed clean away, and he would have begun to smile like a little child in its sleep.

The artist's transparent honesty is demonstrated by the face of the youth accompanying him. It cannot be called a typical motor cycling face. The expression is a trifle vacuous. But he was there, so Miss McKie frankly put him in. I regret that his features do not emanate that concentrated intelligence which is the hallmark of the true motor cyclist. I can only plead that he is not quite as vacuous as he looks. He has got quite an awkward bit of steering ahead of him, but he is not at all frightened. More than that. In the face of the dexterous wriggle with which he intends to dodge an impending collision, he can spare the effort to notice that the lady in the sidecar is rather a scream. I really believe his motor cycle may yet make a man of him: possibly his rich and indulgent papa gave it to him with that very intent.

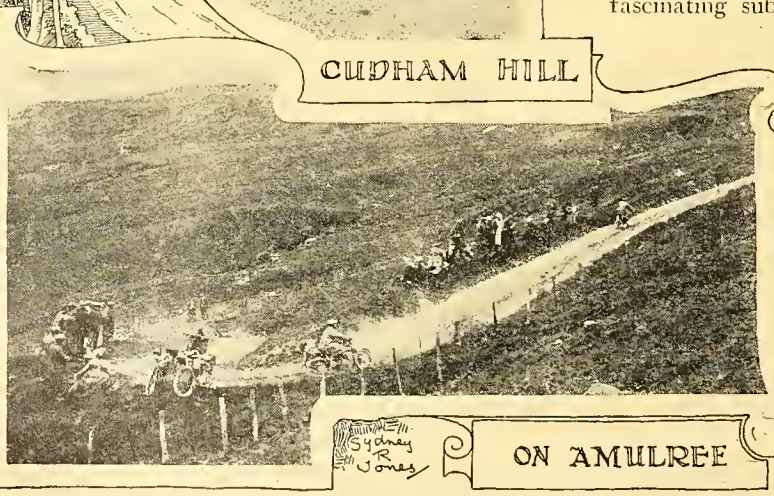
Let me conclude by meeting an inevitable objection to the eloquent defence I have put forward to answer the foul charge that we are nasty looking people. Some readers may have watched cinema films of the leading trials, and noticed agonised expressions on the faces of famous riders when a trials secretary has confronted them with a combination of (1) a narrow lane; (2) a grade of 1 in 2; (3) a watersplash; (4) oolitic mud two feet deep; (5) three baulked sidecars. I grant all this. I suggest that under these terrible conditions a motor cyclist, however mobile his features, looks no more frightful than an ordinary man does under a parallel test—the waiter who has spilt a plate of soup down the neck of a female royalty, the dancer who has trodden his best girl's skirt off her waist, the parson who has audibly uttered an unclerical word when he can't find the place in his prayer book. No. To judge our looks, we must be tested under normal conditions; and such a proviso is well met by selecting the Portsmouth Road on a Saturday afternoon, and preferably a fine Saturday afternoon in Spring.

IXION.



"He has no illusions left in this world, and he never had any about the next. . . . the stout man wearing goggles has an element of sourness in his composition."

The most Difficult Hill—and Why



OPINIONS OF WELL-KNOWN COMPETITION RIDERS AS TO WHICH IS THE MOST DIFFICULT HILL ENCOUNTERED IN RECENT TRIALS.

HARDEN BANK

CUDHAM HILL

ON AMULREE

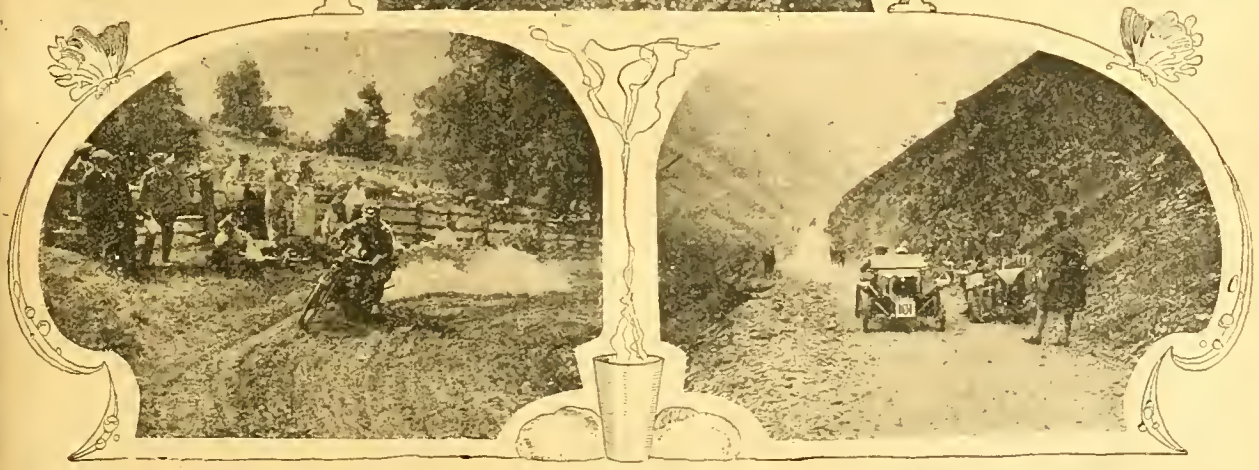
LET any reader who has followed recent trials through the pages of *The Motor Cycle* ask himself which is the most difficult hill to climb. Before reading further, let him pause and think which of the many notorious test hills stands out in his mind. (Remember that any hill on which one fails appears very much steeper than it really is.)

Is it the much-talked-of Park Rash in Yorkshire, the stiff and greasy Porlock in Somerset, the Devonshire terror—Lynton, the famous Applecross in Scotland, or Alt-y-Bady or Bwlch-y-Groes in Wales? Or is the hill which has been impressed upon the mind as the most difficult to trials competitors one which is less famous?

When Experts Disagree.

Even among the staff of *The Motor Cycle* who have seen—and sampled—most of them, opinion is not unanimous. Harden Bank, Porlock, Lynton, Alt-y-Bady, and Applecross are all regarded as first "favourites" (after all there *is* a fascination in conquering precipitous hills), and any attempt to bring opinion into line by argument has always failed because personal experience on all the hills discussed has not been enjoyed on one and the same machine. What may have been comparatively easy with one motor cycle might have been very difficult with another—the red clay of Porlock is like dough in wet weather—so it has not always been a problem determined by engine capacity.

It is indeed difficult to obtain a true census of opinion for the reason that few competition riders have tried them all. In order to test opinion on this fascinating subject, we recently invited a number of



The Most Difficult Hill—and Why—

prominent trials riders to give their views. Exactly fifty-four were mentioned, and this is the scoreboard :

Alt-y-Bady, near Llangollen	13
Bwlch-y-Groes	8
Summer Lodge (1920 A.C.U. Six Days) ...	7
Park Rash	4
Applecross	4
Porlock	3
Harden Bank	2
Litton Slack	2
Glendoe, Amulree, Kenmore, Mam Rattachan, Urry's Pet (Harlech), White Shaw Moss, Beacon, Blea Tarn, Cudham Church, Aultnaharie, and Succombe Hill	1

Such a wide diversity of opinion is, to say the least, somewhat mysterious. When hills such as Kirkstone Pass, Rosedale Abbey Bank, Draycott (Mendips), Keighley Gate, Thwaites Brow, Rising Sun, and Abriachan are omitted altogether, and such a hill as Beacon in Worcestershire included, one immediately assumes that the rider who votes for the latter cannot know the severity of the others. It may therefore surprise the reader to know that Beacon Hill is considered the most difficult by the well-known trials rider, Albert Milner, who knows most of the hills included in recent Scottish and English Six Days Trials.

(LEFT) KENMORE HILL. (TOP) PARK RASH (RIGHT) BWLCH-Y-GROES.

"My pet bogey in the way of hills," he writes, "is the Beacon at Rednal, which most competitors find so easy; anyhow, it is the most difficult hill I have climbed, and my first attempt was with an old Humber single gear tricar some twelve years ago, and I never had so much experience in ninety minutes in all my life."

We venture the opinion that Milner must have come a cropper in one of the ruts on Beacon Hill, otherwise how can it be that he should forget his ascent on a Levis of Amulree and Abriachan in the 1914 Scottish Six Days?

One can quite understand the hill at Harlech, named Urry's Pet in last year's M.C. and A.C. Trial, being mentioned by only one rider, since, although it was included in an open trial, it has since been decided that it is a freak hill, and therefore outside the class under discussion. Probably a larger number would have mentioned this hill, had they not excluded all freak climbs from their minds. It is Capt. J. L. Stocks, the Ariel exponent, who votes Urry's Pet, the surface of which consists of large boulders and loose stones. It may be recalled that this hill caused the drivers of passenger machines to "go on strike," and it was afterwards "washed out."

Also among the single vote hills is Aultnaharie, in the 1919 Scottish Six Days. Vivian Olsson opines that it is the worst hill, because of its half-mile of 1 in 4, with large rocks in lieu of a proper surface. Starting from the loch side, there is no means of rushing the hill, and if one cannot climb it the only way to get out of Aultnaharie village is to take a boat over a wide loch to Ullapool.

W. F. Guiver, a most consistent medal gatherer since 1910, considers Cudham Church hill the most difficult, because of its approach by a narrow winding lane, followed by a steady climb, then two bad corners, and a final stretch of 1 in 4 to be taken with a hot engine.

The Matchless exponent, J. A. Hoult, thinks Blea Tarn the worst climb he has met with in trials, and he gives as his reason that the severe gradient and rough surface combined need all the skill one possessed in driving.

The well-known George Brough is another who votes for a hill not mentioned by anyone else. The Kenmore side of Amulree is his choice, "because," he says, "the sporting Scots always include it on the last lap of a six day trial which has been a daily succession of mountain tracks and river beds.

White Shaw Moss, too, receives but a single vote, and its sponsor is G. W. Wilkin, whose recent coast ride with one of his motor cycles is still fresh in the memory of our readers. White Shaw Moss was one of the hills in the Ilkley trial, and has a very severe gradient and an atrocious surface. And such a lot of gradient!

J. R. Alexander, of the famous Scottish motor cycling family, as was to be expected, votes for the Scotch hills he knows so well. "For sheer gradient," he says, "Glendoe is about the worst hill to climb; but another hill, which has not the gradient of Glendoe, is Amulree, and it is a much more difficult ascent for the inexperienced rider, owing to the hairpin bends and loose surface."

An airman-motor cyclist, H. R. Davies, whose terrestrial mount is an A.J.S., considers Mam Rattachan, in last year's Scottish Six Days, the most difficult hill he has encountered in open reliability trials. His reasons for instancing this hill are, in his own words : "(1.) Its extreme length, being between two or three miles long, and necessitating middle and low gear all the way, with very little cooling facilities, owing to its sheltered position. (2.) Its

The Most Difficult Hill—and Why—

sandy surface, which is decidedly treacherous, especially on the S bend about halfway up, where the road bends sharp to the right over a bridge."

There are not many hills which have been included in, and then washed out of, an A.C.U. Six Days Trial. Litton Slack, in Derbyshire, is one of the exceptions, and will long be remembered by some of the competitors in the Six Days of 1914. We admit we rather expected that it would have been mentioned by more than two of our fifty contributors—Jack Haslam (of Sheffield) and Harold Finch (of Coventry). Both these riders were on 3½ h.p. Premier sidecars in the 1914 Six Days, and the first-mentioned obtained a special award for his splendid performance. We, too, agree that there are very few worse hills to be found than Litton Slack, and it would be interesting to see how post-war motor cycles show up on its gradient. All the hill is visible from the bottom, therefore there are no awkward hairpins and surprises, but the gradient is so severe and the surface so loose as to cause bad wheel slip under the best conditions, while in the wet it is well-nigh unclimbable. In the 1914 A.C.U. Trial, the first dozen or so competitors delayed the rest of the entry for over an hour, when they were sent round by another route, and the hill was "washed out."

The Dreaded Porlock.

The veteran Harold Karslake—or, as he is known to his intimates, "Oily"—names Porlock Hill, the *test de résistance* in the London-Land's End Trial at Easter. Karslake has climbed the hill many times since his first ascent in 1906 (he omits the name of his mount), and still it stands out in his mind as the worst trials hill, because of its treacherous surface, varying from day to day, the high banks with deep gutters, and its first bend, which is "fatal" if taken too fast or too wide.

Porlock is also J. S. Bennett's worst hill. This rider of a Metro-Tyler views hills as a lightweight competitor, and, perhaps, is in a better position to draw comparisons than one with a 1,000 c.c. engine at his disposal.

Another hill mentioned by J. S. Bennett is Succombe Hill, Warlingham, which has a reputed gradient of 1 in 2½, with a right-angle bend at the top.

Dan Bradbury, the Sheffield rider of Nortons, also selects Porlock as the *pièce de résistance*, and, strange to say, is the only one of the fifty to refer to Lynton. In the confines of *The Motor Cycle* office he will find supporters, however. Bradbury, in fact, names five hills: Park Rash, Alt-y-Bady, Lynton, Porlock, and Bwlch-y-Groes.

Bwlch-y-Groes figures quite prominently; in fact, it comes second to Alt-y-Bady in the schedule given on the preceding page. It is a mountain pass which is very deceptive, and for this reason is a trap into which many fall on ascending it for the first time. Among those who have a special regard for this hill may be mentioned such leading men as Hugh Gibson, Victor Horsman, Alexander Lindsay, M.B., P. W. Moffatt, and Kaye Don.

A Test for Engines

Dr. Lindsay gives as his reason "because it looks dead easy. It is a test of scientific engine design rather than of cyclobatics and rear tyre adhesion." Victor Horsman reminds us that "there is so much of it"; while Kaye Don writes: "I consider the most difficult hill in open reliability trials is Bwlch-y-Groes, owing to the length and severe gradient, especially at the top."

P. W. Moffatt says: "It is the steepest long hill that I know, with a nice steadying hairpin at the bottom"; while Hugh Gibson considers it the finest test hill in the country. "It is simply a long grind," he writes. "If a representative batch of new stock machines could be taken from depots and run fifty miles and then up Bwlch-y-Groes, the percentage of failures would very likely exceed 90%."

Donald S. Parsons, the captain of the Essex Motor Club, also gives Bwlch-y-Groes pride of place, for reasons given in the words below: "The bottom has to be reached by very heavy going; the two hairpins at the foot are teasers. Then follows over a mile of hard collar work; the gradient appears easier, and the novice is tempted to allow his engine to run at a good speed, resulting in overheating and failure."

The P. and M. rider, P. O. Cunningham, also considers this long Welsh hill the worst hill in modern reliability trials.

Personally, we have found Bwlch-y-Groes only second to Applecross as a test for air-cooled engines, but memory regarding the latter appears to be short, and it is mentioned by only three of our fifty exponents. A. G. Fenn, who used to figure conspicuously on a B.S.A., but now with the Raleigh Co., votes for this long and trying grind. "The surface is poor," he says, "the corkscrews keep you busy, and you generally manage to strike it when behind time."

The veteran Quadrant rider, T. Silver, also cites Applecross as the most severe hill to climb; and this opinion is confirmed by Jesse Baker, the Scott rider from Wigan, who describes it as "about a couple of miles of serious single figure climbing, preceding two wickedly acute hairpins on 1 in 4 gradient at least. This, coming after a tiring climb, just puts the 'tin hat' on both man and machine."

Last Year's Six Days Hills.

Considering the "howl" raised by competitors during last year's Six Days, it is perhaps a little surprising that only four competition riders mentioned Park Rash. Frank Smith (of Clyno fame), H. Mortimer Batten, and E. F. Goodman (the Velocette rider) are among those who refer to Park Rash as "villainous," "an absolute terror," etc.; while F. J. Ellis, hon. secretary of the Woolwich, Plumstead, and District M.C., who frequently figures in the big trials on a Matchless, hesitates between Park Rash and Summer Lodge. The latter hill was probably the worst of last year's A.C.U. Six Days Trial, and is one of the trio of terrors, of which Park Rash is one and Harden Bank the third.

W. A. Fell Smith, now an ardent Rex rider, replied: "Without hesitation, Summer Lodge. I think it safe to say that this hill will never again be included in an open trial until such time that caterpillar tractors are standard."

D. A. Atkin, who competed on a Rover solo, also votes for Summer Lodge, as does Capt. R. Charlesworth, the Zenith rider. P. W. Bischoff gives a rather curious reason for his choice of Summer Lodge, concerning which he says: "The first mile kills the engine, the double hairpin bend is extremely difficult, the gradient is far more severe than it appears to be, and *an air pocket just below the final crest upsets carburation* at the critical moment."

R. W. Duke, of the Birmingham M.C.C., and G. J. Shemans, of Coventry, both experienced Triumph riders, regard Summer Lodge as their worst hill; while F. W. Applebee, who flies up Snaefell like a two-year-old, says, if it must be done, he has little preference between scaling Park Rash, Summer Lodge, and Harden Bank.

A Southern Hill.

In wet weather, the intrepid veteran cites Old Chalky as the worst of all. Ride you ever so wisely, the machine will most likely get on top of you.

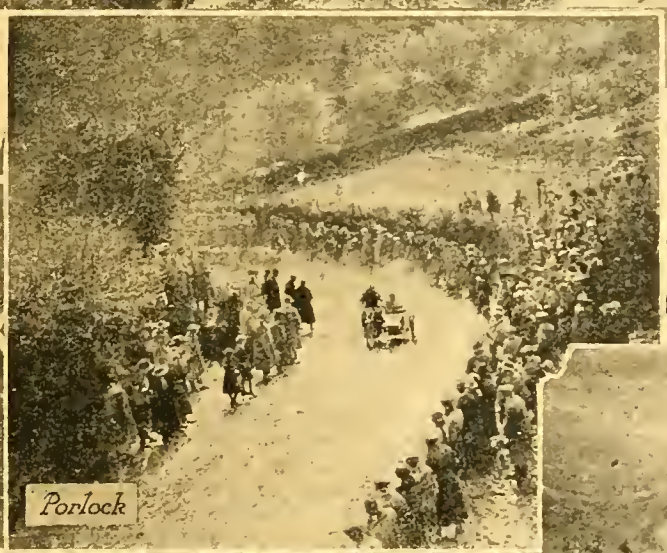
Including F. W. Applebee, only three mentioned Harden Bank, which Mrs. O. M. Knowles, of Gissing Hall, Diss, considers the "toughest proposition"; while Norman Rycroft mentions that it is one of the few hills he knows which is little affected by weather conditions.

And now to Alt-y-Bady, the Llangollen terror, which in some trials has brought every sidecar to a standstill, and shattered the reputations of many "non-stop" soloists. Small wonder that it scored the largest number of votes.

What can one say about Alt-y-Bady, except that it is as steep as the roof of a house, very, very rough, and, in the words of more than one, "a holy terror." It is narrow, there are bends at the approach, there are deep gulleys, an uneven surface, rocks (plenty of them), and, owing to fields on either side, it is very slimy. Verily a sticky mixture!

J. A. Newman, a consistent Sunbeam rider, says: "You can never be *sure* of making a clean ascent, even the best rider on the best machine."

Frank Giles, of the A.J.S., claims that it calls for a high standard of individual driving skill. G. D. Hardee, the Greenwich Matchless rider, says its gradient and surface demand the greatest skill in holding any sort of machine on it. R. B. Clark, who usually rides a Coulson, says its characteristics make it "a real teaser."



And the roll call supporting the Llangollen titbit includes such names as the Rev. J. M. Philpott, G. Packman, Leslie Guy, Gus Kuhn, J. Watson Bourne, S. W. Phillpot, W. H. Carson, J. E. Greenwood (the Sunbeam designer), and Bert Kershaw, which is in itself convincing. And so Alt-y-Bady wins the International comfortably for Wales.

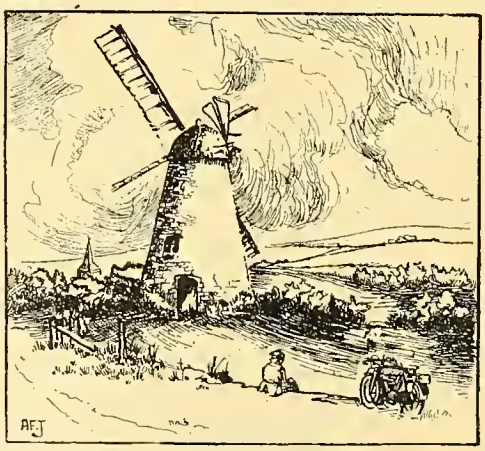
The FENLAND as a TOURING GROUND



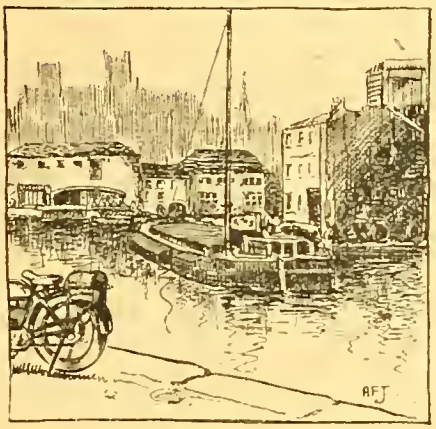
The Attractions of Big Boundaries and Vast Spaces.

A STRANGE weird land is the English Fen Country, especially under a brooding sky. It is land more foreign than any part of England under any weather condition, but on those days when a deep palpitating gloom gathers over those vast expanses, a strange mystery that baffles description seems to permeate everything around. A storm on a Welsh or Scottish pass is a magnificent spectacle, but there is nothing quite like the threatening shadows of a storm in the Fens. The mighty space of clouds and the leagues upon leagues of wild luxuriant greenery, and the ominous leaden glint of the waters together make the scene more impressive than can be observed elsewhere in Britain.

A Strange Attraction.

It may seem strange to open an article on the Fens by describing the beauties and mysteries of stormy weather, for storms are no more frequent there than in any other part of the East Coast—a coast notorious for its sunshine. But if one is fortunate enough (or unfortunate, according to one's nature and clothing) to experience a storm in this exposed district, one will not forget the experience. The odds, however, are greatly in favour of the touring motor cyclist not experiencing a storm, but to be blessed with sunshine—sunshine and air of such a quality not to be found anywhere except on the coast between the Humber and Cromer; air steeped with ozone of such tonic value that it makes the mountain breezes weak wine in comparison.

The Wolds, which are in strange contrast to Fen country.



As a touring district, Lincolnshire is comparatively new ground. The motor cyclist who has not climbed the hills of Lincolnshire or traversed the great expanse, smiles at a suggested tour in the Fens, but he smiles in pitiful ignorance. I have motored in the Trossachs and along the glorious banks of Loch Lomond, in Yorkshire, Derbyshire, Wales, Sussex, Surrey, Warwickshire, and the Wye Valley, but, strange as it may seem to some, the most vivid remembrances are those of motor cycling in Lincolnshire.

Sunset Effects.

It is difficult to define the outstanding features of this part of England. When one journeys to Westmorland and North Wales, one goes expressly for mountain scenery or the lakes; Warwickshire for sylvan beauty and old world cottages; Sussex and Surrey for rolling downs and wooded races. All the beauty spots of the British Isles have their particular and definable attractions, but the great expressive fenland is beautiful in some subtle majestic way that simply cannot be analysed. Compare the deep charm of Hobbema's "Avenue of Middelharnis," with Leader's pretty Welsh or Thames pastorals. Both have their charms, but the old Dutch masterpiece—that magnificent study in perspective and spaciousness—compels and intrigues when the others are forgotten; and so with the Fens. Its skies are the finest in the world, and nowhere in the world, not even in the Pacific or in California, can one see more gorgeous sunsets. It is worth much to see a Fen sunset.

The Fenland as a Touring Ground.—

But the motor cyclist does not choose a touring ground because nature is prodigal in its sky colouring in that particular district—something of greater material value must induce him to break new ground. One does not care to waste precious days of a fortnight's holiday on experiments, although the adventurer in a new land must be prepared to take what is found. So one of the first things the practical motor cyclist will enquire about will be the road conditions, for bad roads may entirely spoil one's impression of a country. If attention is absorbed in dodging holes there will be few rhapsodies about the cerulean blue above. But the question of bad road surface need not bother him. There are long stretches on which he would have difficulty in finding a pot-hole. The run, for instance, from Nottingham *via* Newark, Sleaford, Tattershall, to the coast is a revelation after the corrugations on some of the Midland highways. He will find narrow little stretches, and stretches—just a few of them near the coast—of such aggravating sinuosity that one would imagine no one but a corkscrew designer could have planned them. Of course, one knows that the eternal dykes and soft ground were originally responsible for the "crooked ways"; but the speedman should be careful on his first visit, for the grand stretches that lead from all parts of West Lincolnshire to the marshes near the coast allow one to maintain a high speed. Perhaps he will suddenly find himself on a perfectly straight narrow bit of going. He may open out, only to find that the road ends not with a curve, as he expected, but with an acute hairpin bend with a deep dyke on each side, and if careless he would not be the first motor cyclist to cut through those luscious reeds and plunge into the black Fen water below.

One of the many quaint scenes to be found in the picturesque city of Lincoln.

Wold, Fen, and Marsh.

Roughly speaking, Lincolnshire may be divided into Wold, Fen, and Marsh, each district having its own distinctive characteristics. The Marsh is about seven or eight miles wide, running along the coast and noted for its fine cattle and purifying winds. In summer the wind is simply an appetite-generating zephyr, except on rare occasions. In the late autumn it can lay on your chest like a ton weight—not in gusts as in the mountains, but with one long, untiring, unyielding pressure. Yes, a cleansing wind, indeed, and one that can transform the flat into a 1-6 for miles on end. Then comes the Fen—flat, rich corn land once perpetually flooded; lands which are fat, lands which have made many fat purses. The third portion of the country—the Wolds—is of different character. These "backbones," reaching 500ft. in height, run north and south, and are in strange contrast to the rest of the country. They can provide pretty good fun, too, for the motor cyclist who has tired of the flats, further east.

Of the historic association one could write reams. Lincolnshire possesses one monument to the skilful engineers of ancient Rome in the old sea bank that modern engineers look on with profound respect even to-day. The Romans left their mark here—there is no doubt about that—and so did other invaders. The Humber and the Wash were such useful places to land marauding parties. It could not have been a very peaceful picnicking sort of existence before Julius Cæsar decided to colonise the place, and it certainly was not peaceful after the good people of those days decided to leave us to ourselves. But history will keep; one does not want history on a short motor cycling holiday—modern hotels and accommodation are subjects much more in keeping. It is with a certain sense of diffidence that I suggest how to see the Fens and Wolds. Some may decide on a "flying visit"—others may dip more deeply into the country whilst journeying to other fields and pastures.

Everyone knows Grantham on the Great North Road (the "Angel" is a good hotel there, very ancient, very picturesque). This old-world town is a good place from which to branch into the Fens from the South or the Midlands—or Stamford would do as well. From the former place one may journey towards Sleaford and Boston through a district richer in fine churches than any part of England. Sleaford behind, the Fens proper are entered, and soon Boston Stump will loom in the distance—a dominant and graceful landmark, crowning a picturesque, and probably more distinctive, town than any other of its size in England.

St. Botolph's has been likened unto the Campanile of Venice, and quite an apt parallel too. For Boston Steeple was certainly a Queen of Waters before the Fens were drained. Boston is a town whose history is like old wine, full bodied and rich. The history of some "historic" towns is musty and flat, and never creates thrills, but not so the past of this ancient seaport.

Skegness—and a Contrast.

Do not attempt to reach the sea from this town, although it is quite close—journey instead on to Skegness. It is a winding road—there is no denying that; but it runs through a quaint and interesting country.

Skegness, as a seaside resort, may not attract you: it is not a second Blackpool by any means, but it has fine sands, one or two good hotels, golf links, and it is "so bracing." "Long low dunes and lazy plunging sea: a coast of league-long rollers," as Tennyson says of this shore, and true it is indeed. Tennyson knew this part, for his birthplace is near-by.

To gain an adequate impression of the varied style of landscape in this country, take the road to Spilsby, Revesby, Coningsby, to Tattershall. There the shell of an old castle remains, a brick built structure rising majestically from the flats. Tales to tell there are of these parts, and even the most prosaic motor cyclist must, on occasions, have his interests stirred when the old tales of the country are told—tales of murders on the highways; of the days when the great lighthouse,

The Fenland as a Touring Ground.—

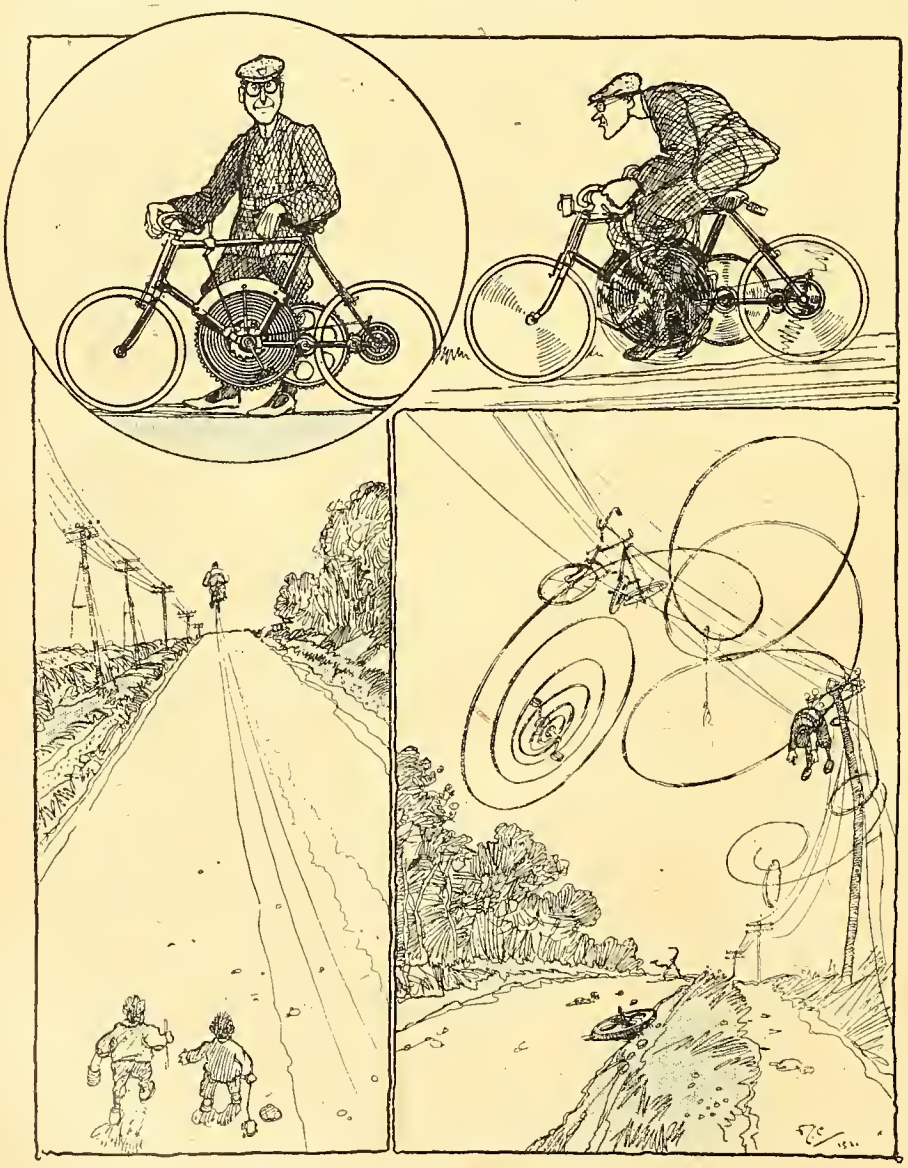
Dunstan Pillar, was erected on Lincoln cliff to guide travellers over the vast fens and marshes; of the weird legends that abound; the folk-songs, the strange belief in witchcraft that exists in some parts to this day; of the ghost haunted roads, and a score of other mediæval tales and beliefs.

From Tattershall, make your way to Horncastle unless you want to see the "Dutch" village of Billinghay and its mills and dykes, which appear to have been transplanted directly from Holland. It is about two miles or so from Tattershall, on the Sleaford Road, and is well worth a visit.

The Hills of Lincolnshire.

The journey from Tattershall *via* Coningsby to Horncastle should be continued on to Louth. It is along this road that one first tastes of the hills of Lincolnshire. From a 300ft. elevation just before the town is entered, one confronts a magnificent panorama; the country from the Humber and across the ten miles to the sea lies unrolled before you, a scene of shifting lights and shades and colour.

It is not a country to race through, and, as one switchbacks across the Wolds to Market Rasen, if a halt be made in one of the many villages, a good deal of unconscious humour may be heard among the older Lincolnshire peasants. Last time I was in the county, I heard the following story—though attributed to a Fen man, it may have had its origin elsewhere.



A small farmer was asked how he had cured his cow that had been ill, and this was his reply. "I got haafe a pound o' sulphur and mixed it wi' warm watter, and bottled it into her," he said with a broad smile. "Eh! it's a fine thing, I reckon," he went on, "is sulphur, for owt that's badly, cow or pig, or the missis or anythink." Other stories come to mind of Fen men, but not having the necessary motor cycle flavour, this one had better stand alone. So onwards from Market Rasen to Lincoln City, taking any of the roads that happen to be handy, for the surfaces of all are good.

A Suggestion.

A powerful outfit is not necessary either to tour the district, and great pleasure could be obtained even with a two-stroke sidecar—in the summer. A really fine tour from London would be to cover the best of the Broadlands, then on to the Fens of Lincolnshire. From Lincoln, one could touch Robin Hood's and Little John's country (the Dukeries of Nottinghamshire), and pass on from there to Derbyshire and back through Nottingham on to Grantham and the Great North Road again. What a contrast in types of scenery this run would embrace! and good roads too, with the exception of the journey from Matlock to Derby.

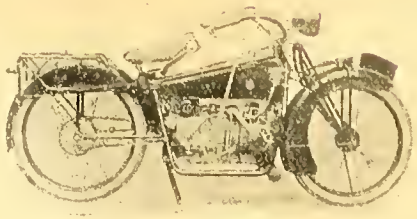
But it is the Fens that I would mark as a district to see. One may have visited every part of the British Isles; may have indeed purposely avoided the Fens; but one does not know England unless one has passed through this foreign looking, dignified county, that fascinates in some strange and unaccountable way—this county of deep luscious shadows, mysterious lighting effects, and vast spaces—swept by an air borne from the grey North Sea.

FRIAR JOHN.

SOME SPRING.
A helical tragedy in four acts

THE MOTOR CYCLE BUYERS' GUIDE OF 1921 MODELS

SPECIFICATIONS (ALPHABETICALLY ARRANGED) AND ILLUSTRATIONS OF MOTOR CYCLES AT PRESENT ON THE BRITISH MARKET.



THIS Guide, first published in 1906, has become a regular and popular feature of "The Motor Cycle." The possession of this issue will enable readers to make a close study of the various motor cycles now available. A straight edge or a piece of folded paper renders the line more easy to follow. In the case of lightweights made in various forms, the prices given are for two-speed models with clutch and kick-starter where such models are included in the respective ranges. All information has been supplied by the makers, and every effort has been made to avoid inaccuracies, but we cannot be held responsible for any errors which may have occurred.

KEY TO ABBREVIATIONS.

RESULTS OF THE OPENING TRIAL OF THE YEAR.

Single-cylinder Sunbeam wins Colmore Cup. Little Levis Lightweights Figure Conspicuously. The "Special" Prizes for Motor Cycles taken by Singles. Morgan Drivers win the Team Prize.

DESPITE the severity of the recent Colmore Cup Trial, British motor cycles have again proved that they are reliable, efficient hill-climbers, and mounts which are easy to ride, for any motor cycle that was not well balanced could not be handled in ruts and stones and on greasy lanes in a manner to give its rider a "non-stop" run. The fact that the retirements represented but 9% of the starters shows that motor cycles have passed that stage when trials were necessary to develop them into machines capable of surmounting hills and running to time. Considering the nature of the course, and the fact that a few years ago so few succeeded in covering it non-stop, it is a tribute to the British motor cycle industry which should convince any intending purchaser who is not *au fait* with the movement that a modern motor cycle is a safe investment. An illustrated report of this trial appeared in last week's issue of *The Motor Cycle*.

The Colmore Cup for Best Performance throughout the Day.

H. O. Hayes (3½ Sunbeam solo).

The Calthorpe 100 gn. Motorcyclette Trophy and Replica for Best Performance on a Machine up to 250 c.c. Capacity.

H. Newey (2¼ Levis solo).

The Levis Cup for the Best Performance on a Single-geared Machine.

Geoffrey S. Davison (2¼ Levis solo).

Special Prizes.

First amateur: H. O. Hayes (3½ Sunbeam solo).
Second amateur: H. J. Willis (3½ Norton solo).
First sidecar: Tom Peck (4½ Ariel sc.).
First cycle car: H. F. S. Morgan (Morgan Runabout).

The Phosphor Bronze Team Prize.

The Morgan Team: H. F. S. Morgan, W. A. Carr, and J. W. Shaw.

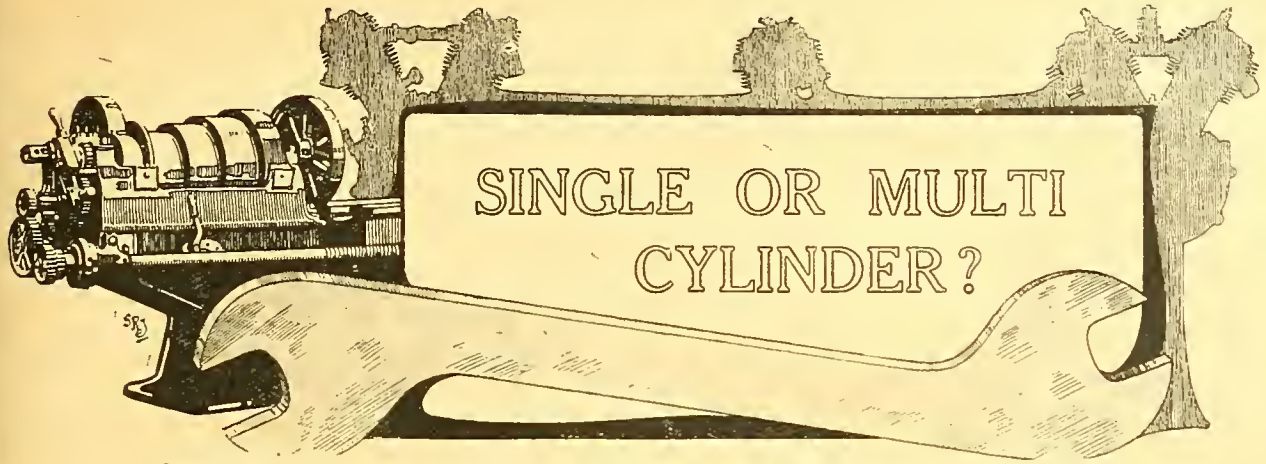
Gold Medals for Best Performances in their Respective Classes.

250 c.c. Solo: H. Newey (2¼ Levis).
251 to 350 c.c. Solo: B. Kershaw (2¾ Verus).
251 to 350 c.c. Sidecar: Only one entry, no award.
351 to 550 c.c. Solo: H. O. Hayes (3½ Sunbeam).
351 to 550 c.c. Sidecar: T. C. de la Hay (3½ Sunbeam).
551 to 750 c.c. Solo: L. Crisp (4½ Humber).
551 to 750 c.c. Sidecar: Tom Peck (4½ Ariel).
Over 750 c.c. Solo: E. F. Cope (7-9 Indian).
Over 750 c.c. Sidecar: F. W. Giles (7 A.J.S.).

Silver Medals (Full Marks).

A. Woodfield (4¼ James sc.).
J. N. Roberts (3 A.B.C.).
Tom Silver (4½ Quadrant sc.).
H. R. Lane (2¼ Levis).
W. A. Fell-Smith (8 Rex sc.).
Capt. J. A. Watson-Bourne (2¾ Blackburne)
H. J. Glendinning (8 Rex sc.).
S. H. Brand (4 Indian Scout).
J. H. Ross (3½ Sunbeam).
T. H. Richards (4 Triumph).
G. J. Baragawanath (4 Triumph).
H. Boynton (5-6 James sc.).
A. H. P. Pehrson (4½ Dunelt sc.).
H. Langman (3¾ Scott).
T. J. Ross (7 Matchless sc.).
R. R. Grindlay (3 A.B.C.).
G. L. White (5 New Rover sc.).
L. L. Sealey (4¼ B.S.A. sc.).
G. Dance (3½ Sunbeam sc.).
E. Walker (2¼ Excelsior).
H. F. S. Morgan (Morgan Runabout).
G. Davison (2¼ Levis single-geared).
W. H. Carson (8 Excelsior sc.).
T. F. Blumfield (6 Ariel sc.).
P. Pike (2¼ Levis).
A. J. Elliott (5-6 Rover sc.).
W. L. Guy (3¾ Scott).
H. R. Davis (7 A.J.S. sc.).
R. E. Pugh (2¼ Levis).
H. L. Cranmore (3¾ Scott).
W. T. Woodcock (3½ Ariel sc.).
E. J. O'Brien (7 Matchless sc.).
W. A. Carr (8 Morgan).
Harry Poole (4¼ B.S.A. sc.).
B. L. Bird (4¼ B.S.A. sc.).
R. C. Cooper (2¾ Alldays Allon).
L. E. Clulee (2¾ Alldays Allon).
F. J. Ellis (7 Matchless sc.).
L. S. Norton (8 New Imperial sc.).
C. W. Hartwright (2¾ New Imperial).
Cyril Williams (7 A.J.S. sc.).
T. B. Haddock (7 A.J.S. sc.).
T. G. Amphlett (4¼ James sc.).
R. W. Duke (4 Triumph).
S. A. Thomson (4 Triumph).
H. P. Cutler (4 Norton sc.).
R. A. Wright (4 Triumph).
W. H. Riley (5-6 A.J.S. sc.).
R. F. Wade (4 Triumph).
H. Greaves (3½ Beardmore-Precision).
A. W. Thrush (4 Triumph).
T. R. Gibbins (8 Coventry Acme sc.).
A. E. Rollason (3½ Ariel sc.).
H. Poole (6 A.J.S. sc.).
A. E. Shaw (Morgan Grand Prix)
J. W. Moxon (4 Coventry Eagle)
G. Kuhn (2¼ Verus).
R. T. M. Ayshford (7-9 Indian sc.).
Sam Wright (4½ Humber sc.).
H. R. Guest (3½ Hoskison).
R. Harveyson (4 Indian).

Bronze Medals.



F. Arbuckle (4½ Humber sc.).
J. E. Greenwood (3½ Sunbeam sc.).
C. R. Little (5-6 Ivy sc.).
C. L. Hull (2¼ Levis).
F. Porter (2¼ Levis).
F. Goodman (7-9 Indian).
W. E. Smith (2½ Connaught).
W. Brandish (5-6 Rover).
W. L. Handley (2½ O.K.).
Geo. Brough (8 Brough Superior sc.).
H. R. Godfrey (G.N. cycle car).
L. G. Tonks (2¾ New Imperial).
G. W. Ravenhill (3½ Rover sc.).
H. S. Nokes (2¾ Dalton-Blackburne).
C. W. Ranstedt (2½ Cotton).
P. S. Platts (6 A.J.S. sc.).
A. J. Jacobs (5-6 New Imperial).
F. A. Watson (3½ Sunbeam sc.).
P. Newman (3 Ivy sc.).
T. H. Meakin (4 Triumph).
F. W. Applebee (2¼ Levis).
Eric Williams (2¾ A.J.S.).
T. F. Watson (4 Norton sc.).
G. W. Walker (3½ Norton).
L. Paynter (3½ Norton).
D. S. Heather (6-7 B.S.A. sc.).
J. H. Walker (4½ B.S.A.).
J. Wainswright (10 T.B. cycle car).
T. C. Thacker (4¼ B.S.A.).
J. Allen (3 Neal-Dalm).
C. Field (2¾ Hoskinson).
R. C. Bennett (2¾ Federation).
C. B. Hanwell (2¼ Cedos).
H. Finch (4 Triumph sc.).
C. P. Wood (3¾ Scott).
N. Hall (2½ O.K.).
Reg. Brown (3½ Sunbeam sc.).
W. Chapman (7 A.J.S. sc.).
B. P. Ransom (5 Lea-Francis sc.).
L. Constantine (3¾ Hobart).
E. Mundey (2½ New Hudson).
A. Milner (2¼ Diamond).
A. H. Stubbs (4¼ B.S.A.).
A. Thom (7-9 Harley-Davidson sc.).
F. Hallam (8 Excelsior sc.).
J. Parker (2¼ Cedos).
W. A. Ridley (10 New Hudson c.c.).
W. J. Lord (2¼ Hobart).

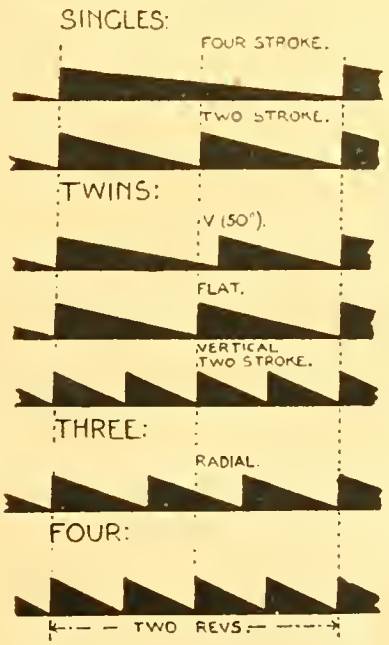
No Award.

H. L. Burley (2¾ Marloe).
H. R. Payne (3 Royal Enfield).
J. H. Watson (3½ Beardmore-Precision).
H. Russell (8 Brough Superior).
H. Close (2¼ Triumph).
E. Foster (8 Dot sc.).
T. Doyle (3½ Lea-Francis).
R. Potter (4¼ James sc.).
J. W. Meredith (10 T.B. cycle car).
E. S. Astley (5 New Rover sc.).
S. J. Marston (1½ Mohile Cyclette).

In Abeyance for Further Consideration by Committee.

F. J. Price (2¼ Diamond).
A. W. G. Martin (4 Triumph).
F. H. Brown (8 Rex sc.).
H. W. Hassall (3½ Norton).
W. Tong (3½ Rover sc.).
F. Begley (4 Dalton sc.).
C. M. Green (4 Triumph).
W. F. Smith (2¾ Hobart).
S. Hall (3½ Sunbeam).

SINGLE OR MULTI CYLINDER?



Describing the Characteristics of the Various Types of Power Units. The Importance of Continuity of Torque on Motor Cycle Development.

MOTOR cycle engines, as all other power units, are undergoing an evolutionary process, and finality remains a long way ahead.

The question so often asked by the inexperienced in motor cycle matters, "What is the best type of engine?" can only be parried by another, "What has it to do?"

In the case of stationary and boat plant, simple cylinder arrangements may be adopted, because there is room for the employment of large flywheels for the smoothing out of torque inequalities, the total weight of the unit being more or less negligible. The same truth obtained in the early development of cars, and still holds in the motor cycle world.

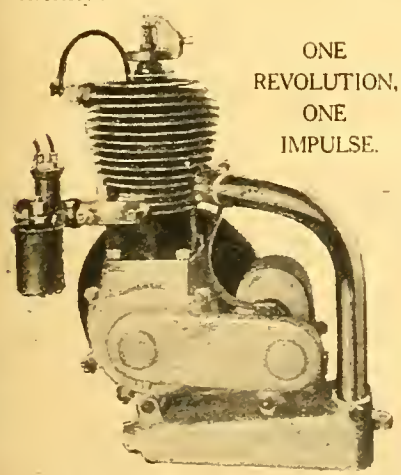
Let us consider the *desiderata* of a successful power unit for road vehicles; six qualities are needed, and these are placed in order of desirability:

Torque impulses of standard types of engines.

(*a*) Power (for given capacity).

(*b*) Reliability.

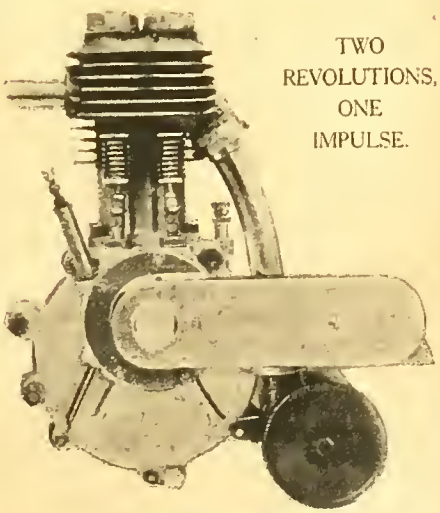
(*c*) Cheapness of operation.



(*d*) Smoothness of running, *i.e.*, absence of unbalanced forces and freedom from torque variations.

(*e*) Lightweight.

(*f*) Cheap manufacture (*i.e.*, simplicity).

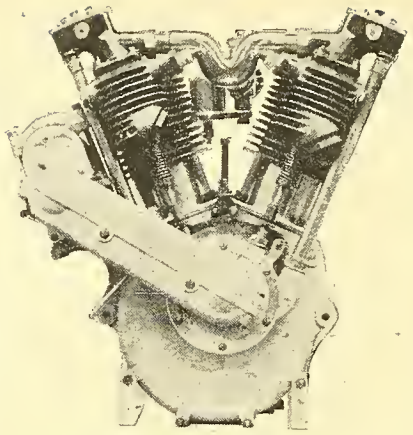


Existing power units are fairly evenly matched on points (*a*), (*b*), and (*c*), but owing to the necessary freedom from frictional losses, the smaller the number of cylinders the greater the available power for any capacity; thus the single usually scores over the twin, as the twin scores over the four-cylinder in sheer b.h.p. for a given total capacity. Reliability is not necessarily greater with one cylinder than it is with two or more. If a one-cylinder engine is reliable for 10,000 miles, surely a four-cylinder engine should be equally reliable, since it is merely a combination of four single-cylinder engines, each smaller and less highly stressed, and each correcting certain defects of the others, resulting in vibration-free running. On the score of cheapness of operation the single again shines, for its comparatively high thermal efficiency and essential robustness of construction permit it to run, as an engine, very economically—the overall economy of the machine it propels, however, may be less than a machine fitted with a more complicated but smoother running power unit.

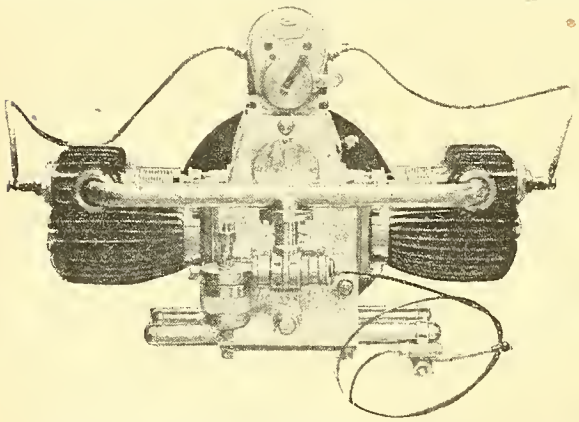
ONE REVOLUTION, ONE IMPULSE.

Single two-stroke, which scores on power for weight, simplicity, and smooth running.

TWO REVOLUTIONS, ONE IMPULSE.



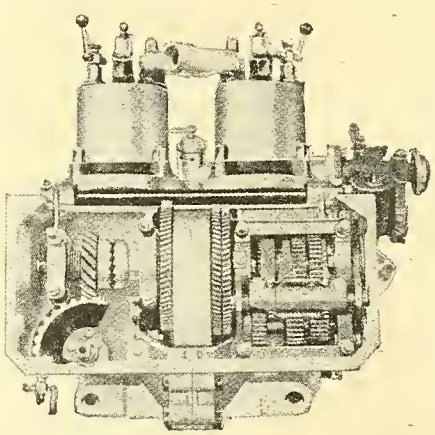
The four-stroke single, pre-eminent for power output from a given capacity.



Single or Multi-cylinder?—

The other qualities (*d*), (*e*), and (*f*), may now be considered. First, smoothness of running: this attribute of good engines has two great sub-divisions. To the average motor cyclist the difference between balance and torque is somewhat hazy, but the distinction between the vibration due to unbalanced parts and that arising from uneven firing intervals is clear and distinct.

Unbalance results in vibration which is felt equally, whether the engine is giving power or whether it is being driven by some external means, and in consequence has nothing to do with the number or disposition of the firing intervals. For a given capacity a single-cylinder engine presents the greatest problem in balancing, and a narrow angle V twin is also balanced only by compromise; on the other hand, a flat twin is almost

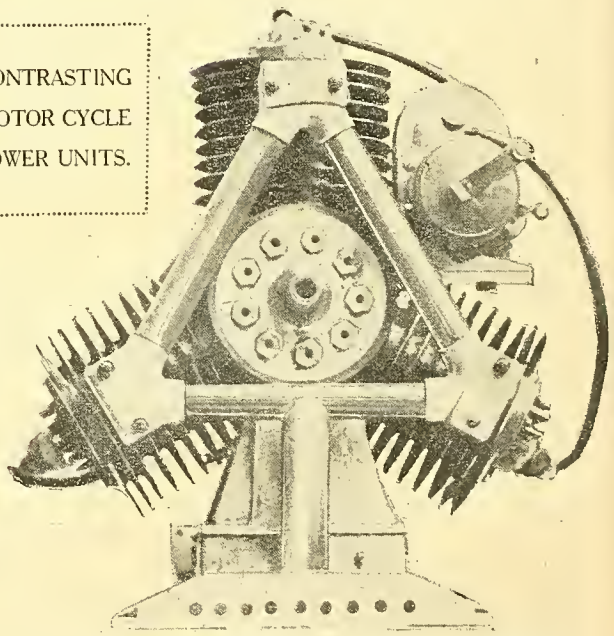


Despite uneven firing intervals, the V twin is pre-eminent on passenger machines.

Absence of vibration—the outstanding characteristic of the flat twin.

perfectly balanced, and therefore runs with practically no vibration at all, while four-cylinder engines, although somewhat inferior to the flat twin, have likewise a minimum of vibration. Vertical twins with cranks at 180° show an unpleasant transverse vibration which cannot be eliminated, while three-cylinder radials occupy a midway position between the flat twin and V twin, almost approaching the former in the absence of vibration.

Torque vibrations may be described as pulsations in the power delivery of the engine, and they have a tremendous effect upon the design of a machine, its comfort and its performance; in many cases smooth torque outweighs the disadvantages of certain unbalanced vibrations, notably in the case of vertical twin two-strokes, where the almost continuous power output compensates for a thoroughly objectionable "couple."

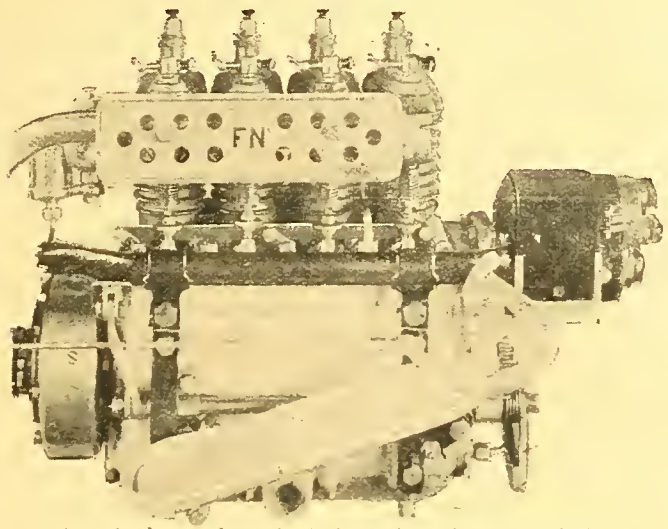


A twin two-stroke; this type gives "four-cylinder" effect with only five moving parts.

Just as a greater number of cylinders allows the engine's reciprocating parts to be smaller and lighter for a given power, so an increase in the number of power impulses over a given period permits a lightening of the transmission elements, and is conducive to a reduction of the stresses and wear imposed upon frames, wheels, and tyres, as well as to an increase in the rider's comfort.

Torque comparisons between the various types of engines are most easily shown diagrammatically, when it will be seen that over a given two revolutions the four-cylinder has the advantage. The power output of this type is delivered in four

CONTRASTING MOTOR CYCLE POWER UNITS.



Even torque, simplicity and low vibration, distinguish the radial three-cylinder.

comparatively small blows, the three-cylinder radial follows closely with three slightly greater impulses, but is beaten by the twin two-stroke, which gives a "four-cylinder" effect. Flat twin four-strokes and single two-strokes give their power in greater impulses at even intervals, twice in two revolutions, while the V twin gives its Morse effect—"dot dash, dot dash"—in the same period. Finally comes the single four-stroke, fated to give its power in widely spaced smashing thumps, and calling for heavy flywheels and staunch transmission gear to deal with its one impulse every other turn of the crank. To review, then, the various types of

Single or Multi-cylinder?— power units on the motor cycle market it is obvious that the question, "What do you want it to do?" must be continually kept in view.

The designer whose slogan is comfort, silence, and smooth acceleration with minimum overall weight, must look to the smooth torque units; he must decide whether cost shall sway the balance between the four-cylinder four-stroke or the simple twin two-stroke. Compactness may make a compromise desirable, in which case the three-cylinder radial offers many advantages. Single two-stroke and flat twin offer similar torque characteristics, but the former lacks refinement of balance just as it laughs at all other types in cost; while finally there is the four-stroke single, first choice of the man who demands maximum power for a given capacity, and who *will* have the entire reliability of the stationary engines which were its forebears.

Luxuriously smooth running is the attribute of the four-cylinder

Has this summary ignored the V twin? Yes and no! Like "crash" gears, the only remark that can be made of this type is that it is terrible, but that it goes. The V twin was developed "because it fitted motor cycle frames"—there can be no excuse for its uneven torque and crude unbalance other than the most telling excuse of all, that it has made possible the success of the splendid and powerful passenger motor cycles which have done so much to popularise the movement. Like many faithful servants, it may have to be discarded, but the day is yet far distant. WHARFEDALE.

PRICES OF SECOND-HAND MOTOR CYCLES.

A Schedule of Prices at which used and shop-soiled Motor Cycles were being offered in the miscellaneous advertisements of last week's issue of "The Motor Cycle."

MAKE, H.P., AND DATE.	CLASSIFIED PRICES.	AVERAGE PRICE.

THE COST OF HIRING A MOTOR CYCLE.

WE frequently receive enquiries from readers asking where motor cycles may be hired. A firm which has lately undertaken this work is Messrs. Maudes' Motor Mart. The cost of hiring is on the following scale:

	Week-end or mid-week (3 days).	One full week.	Per week for two weeks or more.	Extra days.
	s. d.	s. d.	s. d.	s. d.
Motor cycle ...	42 6	85 0	76 6	10 0
Sidecar outfit ...	52 6	110 0	90 0	13 0

All hiring charges are payable in advance together with a deposit of £10 for a motor cycle or motor cycle and sidecar, which is held to cover any petty damage or loss of accessories not covered by insurance. The deposit is returnable in full when the motor cycle or motor cycle and sidecar is returned in sound condition. Week-ends are counted from 6 p.m. on Friday to 10 a.m. on Monday and mid-weeks from 10 a.m. Tuesday to 6 p.m. Thursday.

All motor cycles are sent out fully equipped. No machines can be hired to persons who have not held a driving licence for at least twelve months.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

WEIGHTS—IN 1902 AND NOW.

Sir,—Though principally concerned with the motor car side of the press, I am a keen follower of your paper privately, and have noticed the difference of opinion existing with regard to the ideal weight limit for the solo machine.

Looking through an article on motor cycling in an issue of *The Car*, dated June 11th, 1902, I was highly amused at the report of a lecture given by Mr. Graham Murray, one of the pioneers of the sport, who expressed his opinion that the absolute practical weight limit of a motor cycle should not exceed 100 lb., as a machine of greater weight would be difficult to handle or to lift into a guard's van!

Perhaps some of the London-Land's End entrants would be pleased to read this. F. T. POULTON.

DETACHABILITY.

Sir,—Your contributor, Mr. Davies, in his remarks on my patent, No. 139,980, in your issue of February 24th, overlooks, or misses, the main purpose of the patent.

In the present makes of engines with outside flywheel, when it is necessary to withdraw the connecting rod and piston for rebushing, the engine must be entirely removed from the frame, dismantled, and in this process and the reassembling a considerable amount of time is spent and expense incurred. My patent does away with the dismantling of the engine, as the power transmission end of the driving shaft and the crank pin can be removed through an opening in the crank case, leaving the engine in the frame without disturbing the setting of the valve timing mechanism and a magneto. WILLIAM MALCOLM.

CLASSIFYING COMPETITION RIDERS.

Sir,—Now that the time for trials and competitions approaches I think that an added interest would be given to their descriptions in your journal if some distinction was drawn between trade riders and amateurs.

Most of us judge the merits of the different machines by the performances of the former, while the efforts of the latter appeal to our sporting instincts.

I would suggest that a leaf might be taken from the book of cricket, and that the names of all professional riders should be given, shed of their initials, while the real amateur should have his full title.

No trade rider, I think, wants to be thought an amateur; no competitor, who rides for the sport alone, wishes to be thought to be connected with the trade. ETAPLES.

London.

[This is not an isolated suggestion, and we should be glad of further opinions from readers on the subject.—ED.]

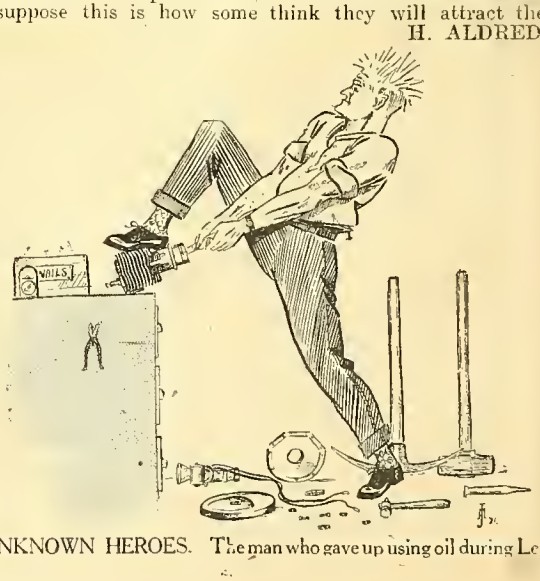
ORGANISATION AND CO-OPERATION.

Sir,—I read from time to time, in *The Motor Cycle*, letters from newly joined A.A. members complaining of the iniquity of the new subscription and lack of personal benefits, and have heard many motor cyclists on the road expressing similar opinions.

It is true the A.A. has more or less brought this attitude upon itself by emphasising too much, in its advertisements, the immediate and personal benefits, such that those who cannot see beyond their noses, and who expect tangible individual results, practically want free petrol, oil, and tyres in return for their subscription. Even so, there *are* tangible personal benefits. The A.A. village signs, fingerposts, warnings, and so on are so numerous and so familiar that one forgets they are all part of the organisation. A.A. scouts have several times saved me a heavy fine for exceeding the speed limit; and the free legal defence alone may save the subscription a dozen times over in a police-ridden district.

But the chief, and far the most vital, benefit is not immediately evident; but it is that to which practically every motor cyclist owes his very existence on the road to-day, so that those who do not join the A.A. are to a certain extent defrauding those who do. It is the fight against Government oppression, taxes, restrictions, rules and regulations, bureaucracy, and red tape officialdom generally. The A.A. is the private motorist's trade union. (I hate the word, and only use it for want of a better.) We *must* have such. If the A.A. were to give up every personal benefit it talks about in the advertisements, the subscription would *still* be worth while. It is true it failed to defeat the new 1921 taxation; and *cui culpa?* A house divided against itself—. I was formerly an A.C.U. member also, but returned my badge after the secretary signed his approval of the scheme.

Your columns have for months been full of complaints about the new tax; but it does not seem to have occurred to anyone that there will be another Budget next year, and that *if the present taxes only stop where they are*, we shall have the A.A. to thank. The A.A., as it is, is making a perfect nuisance of itself in Parliament, and I doot it hasna finished yet. A.A. 282590 AE 8675.



Cambridge.

SPORTING OR SOCIAL CLUBS?

Sir,—With reference to your remarks headed "Fostering Club Life," in the issue of February 24th, I should like to voice my opinion, as the late secretary of a motor cycle club, of the indiscreet decision of that club, and maybe of others, of making the club of a purely sporting nature. There seems to be a notion in some minds that every motor cyclist is "single," or *should be*, and this seems to be approved by the A.C.U. as a governing body of the pastime which, since the formation of the various centres, has resolved, I believe, that no other club can be recognised where one already exists unless that centre *approves*.

It has been a topic of late as to "Where are the ladies?" I suppose this is how some think they will attract them.

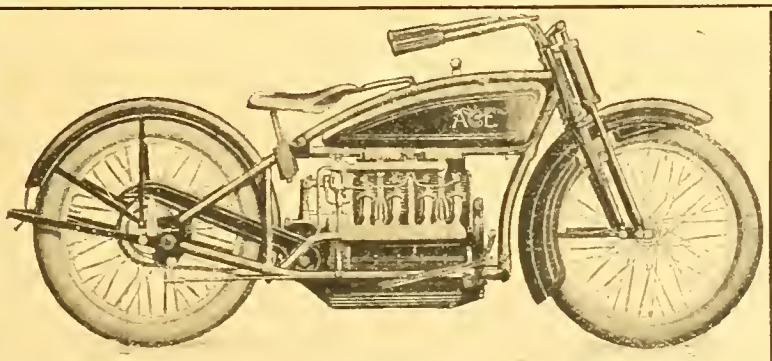
SIDECARS FOR EASTER

FOR FITTING TO YOUR OLD OR NEW MOUNT.

A SINGLE OR DOUBLE SEATER AT WILL.

SPECIFICATION. Sidecar body and chassis (finished in any one of the six standard colours) Coverall apron, complete with turn-buttons. Adjustable lamp bracket. Aluminium step plate. Self-locking sidecar wheel stand. 26in. or 28in. wheel, tyre. Four point suspension complete with steel sidecar lugs for attachment to most makes of motor cycles. The whole of these guaranteed for six months. Total weight—185 lb. No irritating extras. Will carry two adults in comfort.

58 GNS.



"THE ACE"

4-CYL. MOTOR CYCLE

The ACE engine represents the last word in what is now admitted to be the motor cycle engine of the future as far as machines of the highest class go.

The lubrication is of the motor car type, a sump in the crank case supplying oil (under pressure) to all bearings. The lower half of the crank case is ribbed to aid cooling of oil and also give greater strength. Heated air intake to the carburetter ensures perfect vaporisation and therefore maximum fuel economy.

The rest of the machine is on equally advanced lines. The front forks are of extraordinary strength, and the springing arrangements are sensitive to light as well as heavy shocks; the mudguarding is designed to prevent any clogging, and the rear guard is movable to allow tyre repairs to be easily done.

NOT ENOUGH MUD TO WORRY ABOUT.

Sir,—As an old and appreciating reader of your valuable paper, may I be permitted a small space in your columns regarding wet weather riding? Many riders—to judge by the letters one reads—appear to think it is high time machines were so constructed that one could start—and finish, a wet weather run in a spotless condition. If they were to take notice of passing cars, they would see that only the body work prevents the passengers from getting smothered in much the same way as a motor cyclist, so that nothing short of a "limousine" motor cycle will ever cure mud splashing.

Personally, on my present mount, I have made many wet weather trips without becoming unduly plastered with mud, and I might mention the machine is not fitted with any special protection beyond a good guard to each wheel.

Passing traffic is responsible for more than half the liquid slush, but if good mudguards are fitted, and a few seconds spent to put on overalls—which, to my mind, need not be particularly unsightly — the most fastidious "Beau Brummel" can ride without being fearful of his appearance at the journey's end.

OPINION.

Tooting, S.W.17.

WIDENING PERFORMANCE.—PRICE RATIOS.

Sir,—There is, I am sure, among the motor cycling community, a certain section who, while possessing funds sufficient to purchase a lightweight only, desire a more powerful and yet essentially simple machine at approximately the same initial cost.

The specification should include a 500 c.c. engine, a plain two-speed gear, and (for the sake of lightness and low cost) chain and belt transmission. The ratios provided should be about the same as the top and middle of the usual three-speed box, say 4¾ and 7½ to one. Given a reasonable surface, there is no gradient that a 3½-4 h.p. will not take in second—with ease. A third speed is therefore merely a luxury, and should, without hesitation, be discarded. To fit a lower low speed would be like equipping a phaeton with dray harness; the machine would lose speed on hills and that sprightliness so dear to the semi-sporting rider and the fast tourist. In this respect and other details every care should be taken to prevent the machine from developing into a weighty, often cumbersome, and usually over-developed, steady going 'bus, which is offered us to-day as a 3½ h.p. solo machine.

The details must be as simple as efficiency will permit; items, such as magneto, tyres, and forks should be as reasonable in price as possible. The brake, for instance, of the belt rim type: for a cheaply built band type is a curse. A low frame should be designed purely for solo riding, and made too light for sidecar work. The total weight would not exceed 190 lb. Apart from the tax-saving point of view, low weight is obviously beneficial in tyre wear and petrol consumption, points too often overlooked by the buying public.

A two-speed 2¾ h.p. J.A.P. engined motor cycle sells at about £75, and, considering that the frame would remain practically identical in both machines, I hope to see the 3½-4 h.p. marketed at somewhere about £85 or £90.

In conclusion, I would like to point out that this design embodies almost all the advantages of the sporting "single gearer," combined with the capabilities of a go-anywhere machine: and this at "lightweight cost." J.H.I.

Dartmouth.

Where one instinctively closes the throttle and travels quietly—the Bishop's Close at Wells, Somerset.

ARE THEY WORSE THAN ELSEWHERE?

Sir,—I should like to bring before your notice, and before the notice of any readers of *The Motor Cycle* who intend to visit Eastbourne in the future, the disgusting condition of the roads round this town. The roads actually in the town and in the immediate neighbourhood are not so bad, even quite good in some places; but outside they could only be described as—hum!—well, appalling is a very mild term to apply.

Riders of spring-framed machines would be able to test the efficiency of their springs. The authorities concerned are evidently asleep. DISGUSTED.

Tonbridge.

OPEN FRAMES FOR ALL.

Sir,—Up to the present very little is being done, or spoken of, regarding the "open type framed machines." I allude to the larger sized machines other than scooters. The nearest approaches are, of course, the few ladies' with "looped" frames, or with the top tube brought rather low at the saddle-pillar bracket. Discussing this subject with many members of the motor cycle world they all agree that the machine of the future will be constructed with double parallel tubes running from each side of the back wheel under gear box, engine, and thence to the head similar to the A.B.C., Superb Four and the handy Reynold Runabout. This latter certainly appears to be so far one of the best attempts to combine comfort and clean riding in all weathers, but we must see more of its endurance to be perfectly satisfied. *The Daily Mail's* motor cycle correspondent remarked recently on "Woman's Keenness to Ride," and why she does not is easily answered in a few words. Open frames are wanted and not the type of cut down or loop frame now being served out as a lady's mount. The properly constructed open framed machine with dashboard for protection is suitable for all, and the sooner the obsolete and "cribbed" push bicycle frame is done away with, the larger the ranks of motor cyclists will become.

Can anyone tell me if he has experienced a certain amount of vibration found at the "grips" on the handle-bars of several makes of two-strokes on long runs of 80 to 100 miles? It is very tiring. Is it caused by their frames not being so stoutly made (in the gauge of frame tubing) as compared with heavyweights? I find the same "dither" on the footboards. Rubber "grips" and rubber blocks under the running boards might help. HAROLD SOLOMON.

LUBRICATION OF BOWDEN CABLES.

Sir,—I should like to send along the following tip, in the hope that it may interest some readers of your valuable paper, who, like myself, are all-weather riders, and may possibly have been at a loss to lubricate their Bowden cables.

Get a piece, about 8in. long, of an old push-bicycle inner tube, and into the end of this insert the end of the cable, then bind the lot over with insulating tape, making a good joint.

Next fill the tube about two-thirds full of a suitable oil, and close the other end tightly with a piece of string. When this is done, get the oil-filled tube between your two hands and squeeze hard. The oil will then travel the full length of the cable, and squirt out at the far end.

This only applies to cables where the ends are detachable from their seats of operation.

I have never heard of this method being adopted before.

Dublin. W.G.R.

CONSUMPTION OF TWO-STROKES.

Sir,—With regard to consumption of two-strokes, I should like to state my experience with an O.K. two-speed Villiers. I get 110 m.p.g. on petrol with the following setting: Amac carburetter, jet No. 22, and level in float chamber about $\frac{1}{16}$in. lower than set by makers. I can give full air on this setting, and usually run with air lever fully open.

I must say this engine is a splendid puller, and the way it takes hills is wonderful. The plug I am using is an Apollo, the best plug I have used, and I can recommend it to your readers. A. WIGGINTON.

UNDER DIFFICULTIES.

Sir,—I have noticed several letters from your correspondents containing accounts of various runs made on (mostly) high-powered new "'buses." I think my adventures on an old lightweight machine might interest your readers.

My machine is a 1911 2¼ h.p. F.N. The tyres (wired-on) were in a bad condition. The rear one, although new some months before, had had all the rubber studs cut off by the mudguard coming adrift. The front one had a groove round the centre where the number plate screw had been rubbing. The induction pipe had a split in it of 2in. in length, which occasionally opened to ¼in. in width.

The cycle was in this condition when I started from Lymington to ride to Westcliff, Essex. I had threequarters of a quart of oil and two gallons of petrol. I left at 8 a.m. on a Saturday. After two or three miles the engine konked out on a small gradient. I cleaned the carburetter, and made a fresh start. For ten miles I went with the engine firing once or twice, "spitting" back in the carburetter, and then firing with an ear-splitting bang in the silencer. I then awakened to the fact that I was getting pre-ignition. I changed the plug, and from that moment I did not have any more signs of engine trouble. But the engine is not the only potential cause of trouble on an old mount.

Arriving at Southampton, I lost my way, and, in addition to getting about five miles on the wrong road, I got a puncture in my rear wheel. Upon looking in my toolbag I discovered I had lost all my patches, and also found my pump was bent to such an extent that I could neither use it nor could I extract the connection. Nothing special happened to me then until I reached Kingston-on-Thames at four o'clock—four and a half hours on a terrible road with no trouble whatever.

Arriving at Kingston, I again lost my way, but I eventually found myself in Piccadilly. I crossed the City with my heart in my mouth, my foot on the brake, in low gear, and with slipping clutch. I had never ridden in the City before, and the roads were very greasy. Near the Tower the back wheel tried to race the front, and I came off, seeing many stars in so doing. I gingerly mounted again, and got as far as the Barking Road, which was under repair, all traffic being diverted to a side road, which had been torn up by hundreds of omnibuses. My tyres stuck it for a few yards, then the rear tube burst!

I went through my vocabulary of choice words, and asked for the nearest railway station. I finished the journey by train from Plaistow, arriving at my destination at 8 p.m., twelve hours after the start. The next day I mended the tube, and without any adjustment did from forty to fifty miles per day for the four following days. My mileage per gallon worked out to over one hundred, and the threequarters of a quart of oil lasted for 120 miles.

The total distance from Lymington to Westcliff is 144 miles, of which I covered on the cycle about 110, excluding miles covered by going on wrong roads. IIJ 1478.

Lymington.

A WINDMILL IN THE CENTRE OF A CITY.

Within a mile of the station at Newcastle-on-Tyne this old windmill defies the winds of Time, and incidentally forms a contrast in power producers with the Victory Model Matchless shown in the foreground.

SIDECARS AND CYCLE CARS

Sir,—I am glad to see the sensible view of the cycle car taken by *The Motor Cycle*.

Although a keen motor cyclist, I must confess that I do not enjoy a mud bath while my sidecar is dry and empty.

I have had an A.V. monocar for a year, and, although admitting that it is not a Rolls-Royce, I must say that its extreme accessibility, simplicity, and cleanliness make a strong appeal to the all-weather rider.

The cycle car, whether having three or four wheels, should be allowed to compete with the sidecar instead of having to compete with cars costing £400.

At a meeting of a newly-formed club in this district, it was decided to debar the cycle car, as it was thought that the cycle car members would "look down on" the sidecar members. We must get rid of this spirit.

Hoping that your valuable paper will do its best to promote friendly competition between the cheap cycle car and the sidecar. A.V.

Sussex.

[While we agree with our correspondent in the main, we do not think that the club incident he mentions is typical of the general attitude of sidecar and cycle car owners. —ED.]

THE FIRST LOVE.

Sir,—Speaking as an ex-motor cyclist who has turned "carist," I do not think a car can hold a candle to a solo motor cycle for sport in driving and in speed on long runs, but the comfort of a car compared to the saddle of a sidecar outfit is very marked. In dirty weather, of course, the car is the vehicle to choose, but in summer there is no pleasure so great as to be astride a good old big single which *can* "mop," but which runs sweetly at low speeds as well.

If you can find room in the columns of your invaluable paper for this letter, I think it will be of interest to those motor cyclists who are wondering (as I did) whether a car would be the thing for the summer or not.

I am now on the look out for a single at a reasonable price for use when I want a joy ride. TRIEDBOTH.

Letchworth.

INSTEAD OF DETACHABLE WHEELS.

Sir,—With reference to "Windy's" complaint of the lack of detachable and interchangeable wheels, etc., on the Harley, perhaps my own case may be of interest.

When buying my 1920 Harley I felt the need of a spare wheel, and turned to a puncture-proofed tube as a solution of the difficulty. It has been completely successful.

On more than one occasion I have removed nails from the tread which must have pentrated the tube, without noticing the slightest loss of air—in fact, the rear tyre has not been pumped up since I fitted the tube, some seven months ago.

I am not an expert on motor cycles, but it strikes me that the Harley engine transmits such power to the rear wheel that an exceptionally strong wheel is essential. The weight of it would be unwieldy in the case of the front wheel.

As far as the exposed rear chain is concerned I welcome it, after experience of chain cases. Graphite keeps the chain in good condition, and adjustment can be carried out in ten minutes. ROE DOG.

Halifax.

MORE TAXATION ANOMALIES.

Sir,—After reading through your article under "More Taxation Anomalies" in the issue for February 24th, I thoroughly endorse your last sentence, "Comment is needless."

Surely "Auld Reekie" did not intend to be read seriously? Take his first point, about two identical machines and a sidecar attachable at will to either. Most of your readers will agree that if "Auld Reekie" can afford two machines he can very well afford to pay the extra £1 involved. All my sympathy goes out to the man who has just managed to scrape enough together to buy a mount and now finds he has to fork out an additional £2. "Auld Reekie's" complaints, however, leave me stone cold.

His second query is even more unreasonable. He wants a refund from the authorities if he happens to sell his sidecar during the year. In the interests of national economy this concession is undesirable. It would mean the creation of an extra staff at tremendous expense.

"Auld Reekie" is an expert at "making mountains out of molehills." After all, the sidecar tax only amounts to a paltry 1s. 8d. monthly, and supposing "Auld Reekie" wants to sell his sidecar in December for £20, everyone would be quite happy if he demanded £20 1s. 8d. for it.

Bolton. FAIRPLAY.

SIDECAR V. CYCLE CAR.

Sir,—I was much interested to read "Ixion's" comments on my recent letter under the above heading. My first impression was that we had joined issue over a very interesting topic and one which will excite the imagination of motor cyclists in particular for many months to come. But after reading his concise deductions, I am half inclined to think that we are both approaching the matter from the same side, but at slightly different angles.

I, personally, am not antagonistic to the cycle car. I am an engineer, in addition to being an enthusiastic private motor cyclist, and am not inclined to turn down the cycle car as a faulty conception purely because the present examples are noisy and somewhat rough. I have too often tasted the bitterness of early defeat and experienced the hours of incessant labour and brain work necessary before a new design of any engineering product can be passed as perfect. The designer of the cycle car has my sympathy; but I prefer to express it in the form of criticisms, as being more helpful from a practical point of view.

The future successful cycle car must have three main outstanding features. It must be simple, both from the manufacturers' and the users' standpoint. It must be reliable in every sense of the word. It must be well-made, and this latter is only possible if the first feature has been thoroughly grasped by the design and production departments. The price is only a secondary consideration, as this point will have been discussed prior to the designing state. There is only a limited market for an article built up to an ideal and not down to a price.

I have come into contact intimately with two of the post-war makes of cycle cars, one of which I owned personally, and the other I very frequently drove and often had in my hands for tuning and adjustment during the same period. One is repeatedly assailed with the statement that the cycle car will do all that the sidecar will do and with a greater degree of personal comfort. This statement is erroneous.

In addition to having sympathy for the under dog, I think "Ixion" will agree the average Britisher relies on deeds and not words. What the cycle car lacks, experience alone can supply. It is the world old process of evolution.

Let the A.C.U. organise fair tests in its forthcoming events so that the sidecar and the cycle car can compete in friendly rivalry, and let us have the same candid criticisms and the same endeavour to advance which marked the evolution of the sidecar. There is room for both types at present. Time alone will decide the ultimate victor.

F. E. SCHOFIELD.

SUMMARY OF CORRESPONDENCE.

One or two other correspondents this week complain of short measure from petrol stand-pipe installations. In one case "two gallons" proved, on measurement, to consist of seven quarts only.

Referring to "Ixion's" remarks on house lighting in *The Motor Cycle* of the 3rd inst., "Brilliant" recommends the Blanchard high-power inverted incandescent paraffin lamp.

Mr. A. J. Thomson states that some time ago he had developed a very satisfactory form of incandescent lighting for motor cycles, but, as the illuminant was of German manufacture, he was compelled to drop the idea.

"R.H.H.," an Edinburgh correspondent, states that he experienced the same elusive noise on his machine as Mr. J. Witham, and evidently caused in the same way, *i.e.*, a loose timing cover allowing the washer to act as a reed.

"Fair to All" calls attention to the fact that a well-known big twin sidecar outfit costs but £5 more than an equally well-known solo machine. He forgets that several good four-seater cars cost only £300, while one or two *two-seaters* cost nearly £650.

Mr. J. T. Bradford revives the old suggestion of a trial for standard stock machines only. He suggests that the trial take the form of a three hours' race at Brooklands, and that a trophy be subscribed for by motor cyclists in general. There would be, he considers, more honour in holding this trophy than in winning the T.T.

A Big Industry.

In this issue over 120 different makes of motor cycles available in this country are illustrated.

Spring.

Usually during the initial preparations for *The Motor Cycle* Spring Number, the weather is somewhat wintry—last week, however, real spring weather prevailed.

Must we all buy Tanks?

Amongst items recently picked up on the road is a motor cycle rear stand. This does not at all surprise us, considering the district was Uxbridge.

Roads in Portugal.

According to a report issued by the R.A.C., the roads in Portugal are in a very bad state. The majority of us are not going to Portugal this year, so there is no cause to worry.

A.C.U. 1921 Handbook.

The 1921 edition of the Auto Cycle Union's official Touring Guide and Handbook is now in the press, and will be published very shortly. Members of the Union desiring a copy of the Handbook before Easter are advised to apply at once to the Secretary, Auto Cycle Union, 83, Pall Mall, S.W.1. The volume is obtainable by non-members at a cost of 3s. 6d. post free.

British Imports and Exports Down.

Only twenty-three complete motor cycles were imported during February, but a considerable number of parts and accessories brought the value up to £10,484 as compared with £27,260 in January. February exports of motor cycles, both numerically and in value, are only about half the January figures. The following are comparative tables culled from the Board of Trade Returns for January and February:

IMPORTS.

	January, 1921.	February, 1921.
Number of motor cycles ..	136	23
Value of machines and parts	£27,260	£10,484

BRITISH EXPORTS.

	January, 1921.	February, 1921.
Number of motor cycles ..	1,203	663
Value of motor cycles only ..	£106,172	£55,004
Value of parts	£54,511	£31,066
Total value	£160,683	£86,070

Easter + Good Weather = That New Mount.

The L. and N.W. Railway's Goods Depot at Coventry is an extremely sensitive but accurate barometer of conditions in the motor cycle industry. After a period of almost unparalleled slackness, March opened with brisker conditions, and now such a rapid increase in traffic has there been that there is quite an acute shortage of transport.

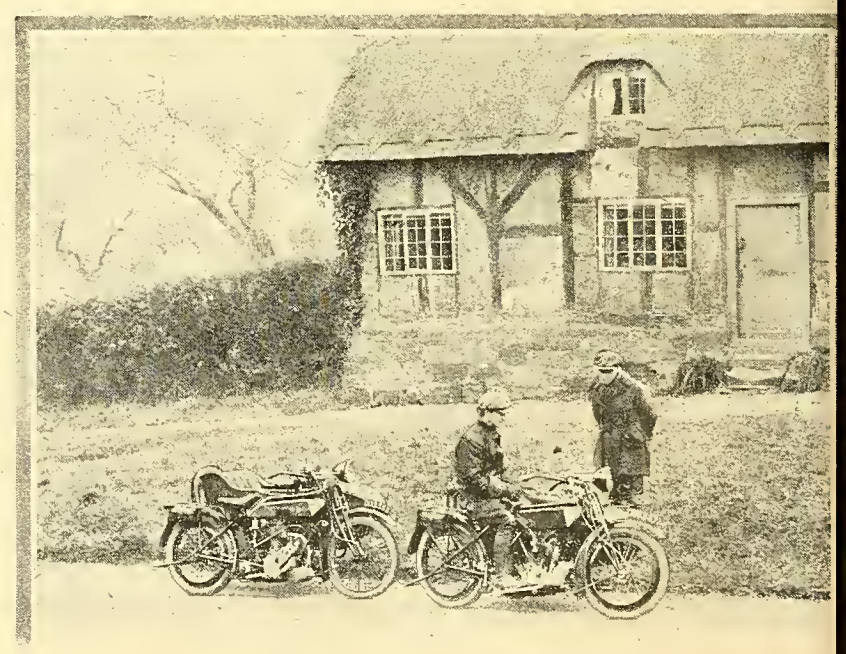
Licences of Stolen Machines.

If a motor cycle is stolen along with its licence-card, must the owner pay again for a licence when he replaces it? As might be expected, the Ministry of Transport replies in the affirmative. It is recommended, however, that owners should extend their insurance policies to cover the value of their licences. This point was first raised by the R.A.C. with reference to stolen cars; and, naturally, a bigger financial loss is sustained in such cases by automobile owners than by the motor cyclist. Incidentally we seem to recall that one of the supposed benefits of the new taxation scheme was to be the impossibility of motor thefts!

Special Features.

BUYERS' GUIDE (ILLUSTRATED).
THE MOST DIFFICULT HILL—AND WHY
FACIAL EXPRESSION ON THE ROAD.

Tourist Trophy Entries.



To the list of entries for the Junio Tourist Trophy Races must be added th names of H. Petty and L. Nicholson who will ride 2¾ h.p. Coulsons.

350,000 to 1.

Those who consider the motor cycl industry overcrowded should bear in min that each of the 120 British manufac turers have 350,000 people in the Britis Isles as his share of the potential marke without considering overseas trade.

Another New Institution.

It has been decided to form an Institu tion of Production Engineers, and general meeting will be held on Apr 2nd. Those interested should commun cate with the honorary secretary, Mr. A T. Davey, 6, St. James's Square, Hollan Park, Kensington, W.11.

CHAIN-DRIVEN RUDGES ON THE ROAD.

7-9 h.p. and 3½ h.p. models equipped with interchangeable wheels and all-chain drive. Three-speed Rudge gear boxes are used, and a new plate clutch on the engine-shaft is fitted. Descriptions of a road test of both models will appear in an early issue.

The Most Difficult Hill.

Too late to be included in our article on the most difficult trials hill, George Grinton, the well-known Scotch rider of a Harley-Davidson, writes that Alt-y-Bady is, in his opinion, the most severe climb. As Grinton knows all the severe Scottish hills, this opinion is not without considerable interest.

Speed through Warwick.

Complaints have been made recently by the local authorities and by the public of the speed at which many motor vehicles are driven through Warwick, particularly in Smith Street approaching the East Gate where the road is very narrow. Special police attention is now being given to the cause of these complaints. Motor cyclists should drive with special care through the streets of Warwick, where unusual caution is always required.

Motor Cyclists and Camping.

Motor cyclists to whom camping appeals will be interested to know that the 1921 fixture list of the Camping Club of Great Britain and Ireland has recently been published. The headquarters of the Camping Club are 4, New Union Street, London, E.C.2. One of the features of the list is a Dutch tour extending from July 16th to 30th.

Airmau and Motor Cyclist.

Lieutenant McIntosh, who flew to Australia from England some months ago, has recently succeeded in making the overland trip across the Australian continent from east to west, on an Indian sidecar outfit. The difficulties of the journey were so great that at the end of it he declared he would rather fly back to England than again make a journey across Australia on a motor cycle.

The Buyers' Guide.

The "Buyers' Guide" given in this issue reveals the fact that 127 manufacturers offer 52 V twin-engined motor cycles, 92 four-stroke singles, 81 two-strokes, 17 flat twins, and 3 four-cylinder machines, the last-mentioned being of foreign manufacture. The above figures do not include the several models offered with different types of gear boxes.

The Richmond Meet.

Already upwards of thirty clubs have promised to attend the annual meet of Northern motor cyclists at Richmond (Yorks.), and, given fine weather on Good Friday, a successful gathering is assured. Prizes to be awarded consist of the A.C.U. Challenge Cup for the club with the greatest percentage of members present, taking mileage travelled into account, the Mayor of Richmond's prize, two prizes for ladies and *The Motor Cycle* prize.

STANDARDISED DIRECTION POSTS AND VILLAGE SIGNS.

The post on the left depicts the village and place-name sign, showing also the national route number. On the right the upper arm shows the style of lettering (the route number being white and black) adopted for second-class roads, the lower being that of first-class roads. Clear and explicit recommendations concerning the erection of these up-to-date direction signs have been issued by the Ministry of Transport to all highway authorities.

Week-end Weather.

The weather last week-end was not so favourable in many parts of the country; but numbers of owners of new machines were to be seen on the road.

A.C.U. One Day Trial.

The one day spring trial organised by the Auto Cycle Union, and which takes place on Wednesday, April 27th, will start and finish at Brooklands. The route will include Street Cobham, Church Cobham, Stoke D'Abernon, Leatherhead, Tothill, Walton-on-Hill, Kingswood, Chipstead, Succums Hill, Warlingham, Titsey Hill, Tatsfield, Polesteeple Hill, Cudham Hill, Brasted Hill, Westerham. In the afternoon there will be Chalk Pit Hill, Tilberstone Hill, Batts Hill, Pebblecombe Hill, Burford Bridge, Ranmore Hill, Effingham.

Colmore Cup Addenda.

In addition to the Colmore Cup award given on page 330, R. Ayshford (7-9 Indian) has been awarded a silver medal.

174 Aspirants for the Victory Cup.

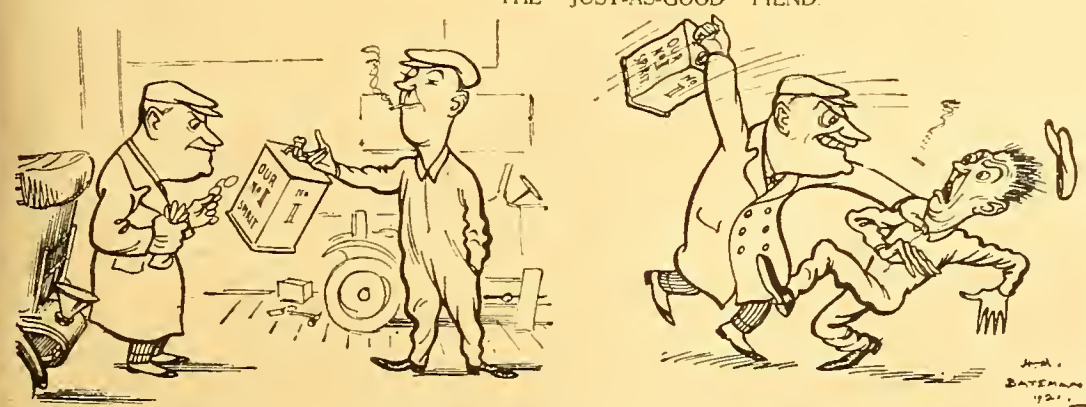
Next Saturday's big Midland event, the Victory Cup Trial, which starts from the Austin works, Longbridge, near Birmingham, at 9 a.m., has attracted 174 entries, made up as follows: 108 solo machines, 55 sidecars, and 11 three and four-wheeled cycle cars. There are no fewer than twenty-four teams.

500 Miles on Brooklands.

A 500 mile race open to members of the B.M.C.R.C. will be staged at Brooklands on Saturday, July 2nd. The first man to cover the distance, irrespective of class, will be awarded a 200 guinea gold cup, presented by Capt. A. G. L. Miller. Silver cups for second and third places, and for the winner of each class, will be presented, and in addition each man to complete the course within twelve hours will receive a certificate.

Wave Transmission and the Motor Cycle.

So much publicity recently has been accorded "wave transmission," that motor cyclists are asking if there is any likelihood of this system being adapted to the motor cycle of the future. While not beyond the realms of possibility, we venture to point out that the main advantages of the invention are more pronounced for comparatively long-distance power transmission. It might, however, prove a solution of the hoary spring frame variation of centres problem.



O'Donovan Again Breaks Record.

That intrepid rider, D. R. O'Donovan, on a Velocette, again broke a Class A record on Wednesday last. On his first attempt he covered the flying kilometre in 38.29s. (58.42 m.p.h.). On the second attempt he lowered his speed to 33.03s. (67.72 m.p.h.). The average time worked out to 35.66s., the average mean speed being 62.93 m.p.h.

This breaks the record standing in the name of J. V. Prestwich, on a Diamond-Jap, 249 c.c., time 37.2s., average mean speed 60.13 m.p.h., November 23rd, 1920.

The day was fine, but rather windy, and the times were taken by Col. F. Lindsay Lloyd. Speedwell oil and Pratt's spirit were used.

THE "JUST-AS-GOOD" FIEND.

We have all suffered from the unscrupulous dealer who, when asked for an article of a well-known brand, offers a substitute which, in his words, is just as good. In every branch of commerce he is to be found, be it in the sale of patent medicines, cigars, or motor cycles. In this sketch the inimitable H. M. Bateman depicts what may happen to the daring gentleman who attempts to market his own "No. I."

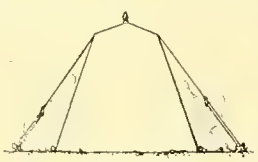
A FEW HINTS TO THE MOTOR CYCLIST BASED ON EXPERIENCE.

SUITABLE TENTS FOR THE SOLO OR SIDECAR PARTY.

THERE are many who have long wanted to camp, but do not know how to set about it. It is really very simple, and the first thing to consider is what kind of kit shall be made or bought, and how it will be carried. Will it be for one—just a lone camper, for a couple of chums, or for a small family of three? One motor cyclist can carry a kit for himself very easily, two chums may share suitable equipment on two solo mounts, while a sidecar does extremely well for a family of three. Personally, we have a kit for three, and we carry the outfit on our 5-6 h.p. A.J.S. sidecar with ease.

Undoubtedly the first step to do is to join the Camping Club, the address of which is 4, New Union Street, Moorgate Street, London, E.C. The energetic secretary, Mr. Searle, is always pleased to give the tyro all information on receipt of a post card. The subscription is very small—7s. 6d. per year—and for this the club issues a wonderful little handbook, and keeps one posted up in all camping matters.

We will take the case of two or three with a sidecar outfit first. Although a good hefty single will be found quite up to the work of carrying the equipment, it is better to have a reasonably high-powered 'bus for the job, for preference a twin, say, about 7 h.p. A three-speed gear is almost a necessity, as at times one comes across many little test pieces which call for the bottom gear. Another necessity is an extremely strong carrier.



My A.J.S. may be taken as a typical machine that is particularly suitable, or even better than the new 7 h.p. model, but this does not mean that, if a machine is of lower power, a camping holiday need be deferred. The Enfield also does well, but the luggage grid of the sidecar needs strengthening a little. This is easily done by running two stays $\frac{5}{16}$in. × $\frac{3}{4}$in. from the body to the back of the platform. I have seen a 4 h.p. Triumph and sidecar used with great success, also a 3½ h.p. Sunbeam, but if buying a new machine, and serious thought is given to camping this year, I would recommend that the reader plumps for the higher horse-power. The main essentials are reliability and roominess for luggage.

TYPES OF TENTS SUITABLE FOR THE MOTOR CYCLE CAMPER

Three very portable tents, 6ft. 6in. long

"A," 5ft. 9in. high, 5ft. 9in. wide

"Gipsy," 5ft. 3in. high, 5ft 9in. wide, 2ft. 6in. spreader.

"Cottage," 5ft. 6in. high, 6ft. wide, 2ft. 6in. walls

The Tent.

Having fixed up the machine, the camping kit must be considered. First and foremost is the tent—of these there are several, the Cottage, Gipsy, A, Alaskan, and the Chalet, being the best examples. Personally, I prefer the Alaskan, which can be made almost any size, but I have found one 6ft. wide, 5ft. high, and 6ft. 6in. long the most convenient. This particular tent has small walls and eaves, and does not need a fly sheet (I will speak of this later) if one is in a hurry. It sets well, and stands any amount of weather, and has a good appearance.

The tent I use is about the above size. It is home-made, weighs 5½ lb., has been used nearly six years for about one month per year, has weathered many gales, and last, but not least, it will sleep four persons quite comfortably.

The Ground Sheet.

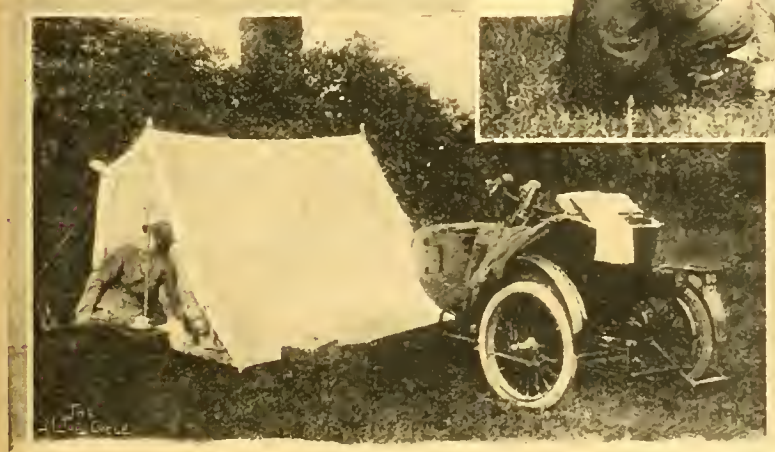
Next in importance to the tent is the ground sheet, to cover the whole of the floor. This may be any

SLIGHTLY MORE ELABORATE TYPES—Two with fly sheets, but none exceeding 7ft. in length.

"Alaskan," 5ft. 9in. high, 5ft. 9in. wide, 1ft. 9in. walls, 1ft. porch, 1ft. 3in. eaves.

"Small Alaskan," 4ft. 3in. high, 4ft. wide, 1ft. 6in. walls, 1ft. porch, 1ft. eaves.

"Small Cottage," 5ft. high, 4ft. 6in. wide, 2ft. 6in. walls.



Camping Equipment.—

waterproof material, provided it is light and weighs not more than 2 or 3 lb. Rubber-proofed sheets are good, but oil spoils them; there are several others, which are impervious to oil. I have always used Moormac, and I find it stands quite a lot of hard wear. Over the ground sheet the potential camper will need something to prevent the cold striking up. Something woolly is preferable, and cashmere is hard to beat. The ground sheet and woolly ground blanket may be pegged out together by loops which will keep them nice and smooth and tidy.

Tent Details.

Next the two tent poles must be considered. These should be bamboo about 1in. diameter, and a total length of 6ft. 3in. made in three sections. A ridge pole is desirable, although not absolutely necessary. Its advantages are that the set of the tent is better and it does not sag in the wind and sun. Against this we have the extra weight and time taken to put up and take down.

Some fifty pegs will be required, and these should be made from ¼in. diameter aluminium rod 5 or 6in. long, and pointed a little at one end.

with a 1in. eye at the other. Quite a lot of campers use twisted iron skewers about ⅜in. × 7in.

I have mentioned above that a fly sheet is not absolutely necessary. All the same, it is very desirable to have one for several reasons. First, when raining, one can touch the tent as much as one likes, and there is no danger of wet coming through. Secondly, when very cold winds are blowing, the tent is much warmer. Thirdly, it provides shelter for the inevitable odds and ends, and many times an extension is added to it to cover the motor cycle. Generally, however, the motor cycle may be "garaged" with some near-by farmer.

Fly sheets require to be made large, so that they can be pegged down very near the ground to prevent the wind getting under them; also really good material is desirable, not necessarily heavy, but it should be strong, with good tapes around the edges, to reinforce it. The fly sheet I use weighs 3½ lb. Cord will be required for the guy lines. It should be very strong, and about $\frac{3}{32}$in. thick. It is not absolutely necessary to use sliding stretchers.

Now all this equipment goes in one small kit bag 20in. long and 12in. diameter, and when on tour it is not necessary to take a lot of trouble in folding. The procedure is as follows: One of the party holds the bag and another takes the fly sheet at the side, after taking out the pegs, and simply feeds the fly sheet into the bag, to be followed by the tent. Then in go the pegs (in a small linen bag), and lastly the ground blanket. The kit bag sits nicely in the front of the sidecar where it is not much in the way; it is too soft to cause any discomfort to the passenger.

What is more enjoyable than a week-end camping picnic? With a light tent, such as a Dunhill, one can make and strike camp with the greatest ease, and easily pack the outfit in a locker such as shown on the Rudge sidecar.

As regards the rest of the apparatus, for each person the following are required: Sleeping suit, sleeping bag (this may be made out of a good dark woolly blanket by sewing up one side and the bottom), and an eiderdown. The method of sleeping and making the bed is quite simple.

When the camp is pitched the eiderdown should, if at all possible, be placed down, and the motoring overalls should be tucked well under the foot of the bed and folded over the top of the eiderdown. Various things can be used for pillows.

The fastidious may use an air bed. However, beds as described are really comfortable and quite light.

We now come to the important question of cooking. The best stove undoubtedly is the No. 210 Primus, which has detachable legs, and is altogether most useful. I have used one for fifteen years, and it has given every satisfaction. There are several grid patterns which various campers swear by. One can easily be made from a sheet of 22G black plate folded like a box with open ends 6in. wide, 1in. deep, and 24in. long. Three holes should be made in the top and one hole in the bottom 4in. diameter—a fixing is needed for four legs at the corners to hold the grid over the stove when it will be found that three pots may

Camping Equipment.—

be kept boiling at once. A light screen is also wanted. This may be held on three long sticks (or wires will do). Several saucepans will be required preferably in aluminium and made to nest. Three is a convenient number, the largest about 7in. diameter and 5in. deep; one handle will serve for all three, and also for the frying pan, which should nest with the saucepans.

An Irreducible Minimum.

One should not take the best knives, forks, and spoons; aluminium implements weigh little and are cheap to purchase. Enamelled mugs will be found suitable, and, if possible, these should be without handles and with tapered sides.

Here is a list of a few more necessary items:

One quart tin for paraffin for the stove.
One small tin or bottle for salt.
One small tin or bottle for pepper.
One small tin or bottle for mustard.
One small linen bag for sugar.
One small linen bag for flour.
One small linen bag for oatmeal.
One large bag for bread.
One screwed top jar about 2in. diameter × 3in. deep for butter.
One screwed top jar about 2in. diameter × 3in. deep for jam.
One collapsible canvas bucket, three gallons capacity.
One collapsible canvas bucket for wash basin.
One small box for soap. One sea towel.
One dish cloth.
Two towels.

Other items may be added as desired, but one should remember, in camping, simplicity is the real keynote of success. Unnecessary impedimenta add to the weight and work, and consequently lessen spare time.

I have found the most convenient way to pack the sidecar is to have one large week-end basket about 24in. long, 15in. wide, and 12in. deep. This is lined with a waterproof material or thin sheet tin. One of the soft things is placed in the bottom (say a sleeping bag), the other two bags being rolled up separately and placed one on each side of the basket; the end of one of the bags is tucked in the saucepans, which then take up very little room and lie well out of the way. The middle is now left for cups, cans, etc., etc., which should be well packed by towels and other soft things to prevent rattle. Other soft materials should be placed on top, preferably those things likely to be required first. The poles lie on top in a canvas case.

We now carry the eiderdowns in our sidecar in a special waterproof case, made for us by the Para Rubber Co., John Bright Street, Birmingham.

If the soloist is camping by himself, he can use a smaller tent about 4ft. high, 4ft. wide, and 6ft. 6in. long. Two soloists on a camping tour naturally divide the kit, and it is quite easy to transport the larger tent needed. The tents should be kept as small as possible, because of the weight and wind resistance when pitched. It is much easier to find a site suitable for a small tent than for a large one, for it is advisable to pitch behind a friendly hedge, in a secluded corner for preference.

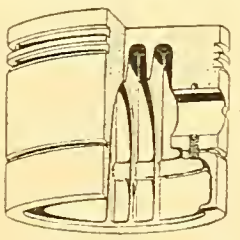
The Lone Camper.

A powerful motor cycle is not necessary for solo campers; some use little two-strokes, but I favour the somewhat heavier 3½ to 4 h.p. tyres. Still, that again is a matter of choice.

I have only just mentioned other tents besides the Alaskan, which appeals to me as "it," but the Cottage, for instance, has a greater floor space, though not so tall. It is made with high walls, so that the sitting space is much greater; but one must use a fly sheet with this type. The simple A is a good type, easy to make and pitch, or the Gipsy similar to the A, but spread out at the tip, giving greater head room; the Chalet is a glorified Alaskan. HARRY RILEY.

The author's A.J.S. ready for a camping holiday. Additional stays were fixed on the sidecar grid to support the load, but no difficulty was experienced in transporting both personal luggage and the tent.

What We May Learn from Aero Practice.



A Brief Survey of Outstanding Possibilities.

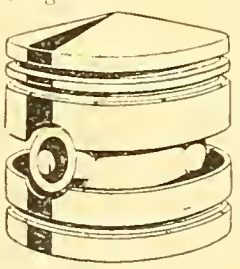
AT the conclusion of the Armistice there was an idea abroad that the effects of modern aero design would immediately be felt, and that everything from houses to motor cycles would be reduced to half their weight or less.

The years roll on and some enthusiasts are apt to feel just a little disappointed, for our motor cycles weigh, if anything, rather more than in pre-war days. How does this state of affairs come about? Let us enquire into the matter, and see how far motor cycles are likely to be modified in accordance with aero practice, and what the effects will be. First, let it be understood that unless we are to pay prices even in excess of those ruling at the present time, manufacturing costs must be considered. This is an important point, for many of those steps towards lightness, which are so glibly suggested by the uninitiated, can only be brought about by a consequent rise in production costs, by which they are automatically ruled out.

Superfluous Nuts, Bolts, and Lugs.

Undoubtedly there are methods of lightening existing types of motor cycles which may even reduce costs. A glance, for instance, at the average motor cycle frame will reveal a multitude of bent tubes and heavy lugs which are more costly, weaker, and heavier than need be. Head lugs and bottom brackets are often strengthened up to avoid breakage by adding more and more metal when a little commonsense design would entirely obviate the necessity, while seat pillars, clip joints, and numerous nuts and bolts may be entirely dispensed with.

Internal ribs are a feature of cooling this piston.



It is not in these points, however, that aero practice will have its main effects, since unless special and costly tubing is used to replace the standard article only a very few pounds weight can be saved by these means.

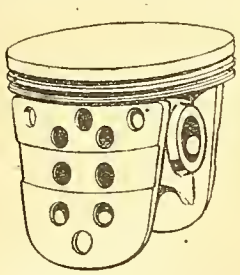
The first real lesson to be learned from aircraft practice is that air-cooled engines can be built to produce *and maintain* efficiency far higher than that of the average motor cycle engine.

But here a curious point arises, for in order to achieve this end it is probable that our engines will become *heavier* as regards actual weight, though possibly a fraction lighter as regards weight per horse-power. The reason is not far to seek, for it has been proved beyond doubt that the only way to prevent local overheating and distortion is to *provide a sufficient body of metal to ensure adequate internal conductivity in the head and walls.* (This statement, though not precisely accurate, is sufficiently near the truth, since the alternatives are not likely to appeal to the average motor cyclist.) This will ultimately lead to a considerable thickening up of cylinder heads, and probably to the use of higher compression ratios, without detrimental effects on the smooth running of the engine.

Efficiency and Cylinder Head Design.

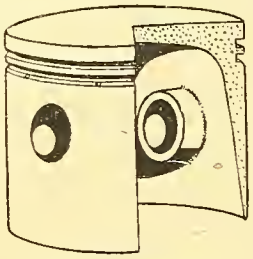
Now this thickening up will lead to an increase in weight, since it is not likely that aluminium will be used for cylinder construction, except in special engines, for some time to come. Aluminium cylinder heads are certainly capable of producing the desired results, but short of "casting on," or screwing and shrinking at the same time—two processes which the average manufacturer regards with suspicion—it is not easy to produce a really satisfactory aluminium head engine.

The Zephyr type piston in aluminium.



Apart from this, if the design is good and enough metal is correctly disposed in the head, the results obtained from cast iron and aluminium will be practically identical except in the matter of weight.

Aero practice has emphasised the fact that the design of valve ports and cylinder heads is of paramount importance, and consequently overhead valve gear was universal practice for aircraft engines towards the end of the war.



The question arises—Why does a 3½ h.p. motor cycle engine weigh 60 lb. when a 200 h.p. aero engine weighs but 400 or 450 lb.? There are many reasons. First, a multi-cylinder aero engine has no flywheel (the propeller supplies all the flywheel effect that is

What We May Learn from Aero Practice.—

necessary), while a single-cylinder motor cycle engine of normal dimension will require flywheels weighing about 30 lb. (approximately half the weight of the engine), if the normal small diameter inside flywheels are used, or rather more than half that weight if

A light slipper piston of the Ricardo type.

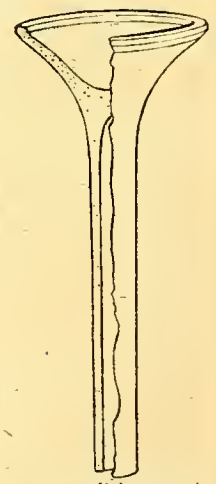
A plain aluminium piston with thick head and walls.

the largest practicable outside flywheel is used. Secondly, aero engines are rated at approximately their full power output, while, for some unknown reason, motor cycle manufacturers retain arbitrary figures based on capacity.

Thirdly, some parts, such as pistons, may be made lighter for war purposes, since they are not expected to wear for any great time. And, fourthly, plain bearings in conjunction with forced lubrication are usual with stationary aero engines, and this combination is much lighter than ball or roller bearings. There are many other reasons, but the above explanation is sufficient to indicate some important facts.

The Case for Forced Induction.

It is suggested that forced induction may be used for motor cycle engines—and this development may be nearer than is generally supposed—but it must be remembered that the main reason for the many attempts to introduce this practice in aero engines is absent in the case of motor cycles, since it is seldom that a motor cycle attains such altitudes as to be seriously affected by the decreased density of the atmosphere, and those who habitually ride motor cycles in comparatively high altitudes can overcome the trouble to a certain extent by raising the compression ratio of their engines. Forced induction or supercharging may prove useful in winning races or in producing a form of what may be termed a variable compression engine, but, in any case, present-day motor cycle cooling will require definite improvement before supercharging becomes general practice.



We are apt to get into a groove and to consider that present-day engines are capable of all that is required of them, forgetting that even now one or two engines stand out head and shoulders above the average as far as genuine efficiency is concerned, and that even these are capable of considerable improvement in this respect without becoming harsh or inflexible.

One feature in which the expense of following aero engine practice is well repaid lies in the use of special materials and processes in order to lighten reciprocating parts. Not only can connecting rods and pistons be lightened to a considerable extent, with a consequent reduction of bearing stresses and balance weights, but valves and valve gear, which many omit to reckon as reciprocating parts, are capable of considerable reductions.

Too many motor cycle manufacturers appear to consider that a mass of metal is the only method of guarding against valve breakage, whereas by increasing the spring strength necessary to make the heavy valve and tappet follow its cam, matters are made worse rather than better.

Where Weight does not mean Strength.

A glance at the type of overhead valve used regularly in aircraft engines, in which a broken valve is likely to prove a fatal matter, would be a revelation to many, for even in valves larger than those used in motor cycle practice, there was *less than 2 mm. thickness* anywhere, except in the neck.

A very light type of valve in constant use throughout the war period.

With regard to aluminium pistons, there is still much to learn. Suitable alloys are available, but manufacturers must devote careful study to annealing and clearance limits. By using proprietary pistons they may save themselves much trouble in this and other respects; but it must be remembered that, except in special designs, a really satisfactory piston will be but little lighter, since its main advantages lie in cooling possibilities, to take advantage of which a certain body of metal is necessary.

That proper lubrication is a *sine qua non* for an efficient engine has been proved times without number; and though pressure lubrication throughout is practically universal for aircraft work, it remains the exception—and the very rare exception—in motor cycle practice, probably for the reason that most cycle engines are either so comparatively inefficient, or are normally intended to develop so much less power than the maximum of which they are capable, that an occasional pumpful of oil when the rider thinks fit is enough to lubricate somehow.

UBIQUE.

MOTOR CYCLE v. ROLLER SKATES—A VICTORY FOR THE TWO-WHEELER.

A NOVEL race which resulted in an easy win for the 2½ h.p. Metro-Tylor was witnessed by large crowds at the Holland Park Skating Rink on Wednesday evening, March 9th.

The machine, which was ridden by J. F. Ammon, was competing in a mile race against A. R. Eglington, the world's champion roller skater. Nine laps were covered, during the first six of which the motor cycle gained little advantage, since the corners at each end necessitated very careful negotiation. The skater, however, became exhausted, and finished about fifteen yards in the rear of the machine.

The motor cyclist's time was 3m. 3⅗s. Rodace tyres were used, and considerably aided the rider to grip the slippery floor at the corners. They are of the three ribbed variety, of very soft rubber.

Club News

Birmingham University M.C.C.

A reliability trial on the 6th inst. attracted twenty-six entries, of whom the following made the best performances: 1, H. H. Wasting (3 A.B.C.); 2, G. H. Jolly (4 Norton); 3, T. A. Mackenzie (3 A.B.C.).

Proposed Club for Weston-super-Mare.

A meeting will take place at the Elm Tree Hotel (Meadow Street), at 7.30 to-night, to consider the formation of a motor cycle club. Further particulars may be obtained from Messrs. D. Read and Co., Orchard Street.

Neath and District and Ystalyfera M.C.C's.

These clubs held joint speed trials on the 5th inst., resulting as follows:

250 c.c. CLASS.—1, A. Ash (2¼ o.h.v. Massey-Arran).
350 c.c. CLASS.—1, A. Ash (2¾ Massey-Arran).
500 c.c. CLASS.—1, C. Hunt (3½ Norton).
UNLIMITED CLASS.—1, Dr. Lindsay (3½ Norton).

Herts M.C. and L.C.C.

At "The Red Lion," Hatfield, on the 5th inst., a representative gathering of motor cyclists inaugurated the Herts Motor Cycle and Light Car Club. It was decided to invite Mr. E. W. Choldcroft, of Buntingford (unfortunately absent through illness) to accept the captaincy of the club, and Mr. D. C. Archer, of Hoddesdon, was elected vice-captain. The office of secretary and treasurer was provisionally accepted by Mr. C. F. Plowman, of 37, Broadwater Avenue, Letchworth.

Luton and South Beds A.C.

New headquarters have been taken for the club at the Red Lion Hotel, Luton, and country headquarters at the Bridgewater Arms, Goddesdon. A whist drive and impromptu dance are being held at the Central Café, Cheapside, Luton, on March 18th. Any motorists wishing to join in 1921's very full programme of sport and sociability are invited to send for membership forms to the hon. secretary and trials secretary, Mr. J. Simpson, 440, Hitchin Road, Luton.

Westmorland M.C.C.

In order to remove any misapprehension in the mind of prospective competitors, we have been requested to state that the limitations regarding capacity shown in the extreme right-hand column of the particulars of events (circulated amongst possible competitors) of the open hill-climb at Orton Scar on Easter Monday apply only in the case of competitors who have entered on formula, and are not to be regarded as restricting the capacity for time purposes. Entries for this event close on March 19th; and readers who desire a copy of the particulars referred to above should apply to Mr. Guy Jeffrys, Castle Green, Kendal.

Forthcoming Club Events.

Mar. 19.—Kidderminster M.C.C. Opening Run.
Mar. 19.—Wallington and District M.C.C. Hill-climb.
Mar. 20.—Brighton and Hove M.C.C. Petrol Consumption Test.
Mar. 20.—Woolwich, Plumstead and District M.C. Inter-club Run.
Mar. 20.—West Kent M.C. Inter-club Hill-climb with Holmwood M.C.C.
Mar. 20.—Sheffield M.C.C. Hill-climb.
Mar. 20.—Public Schools M.C.C. Opening Run.
Mar. 20. Manchester M.C. Opening Run.

IMPORTANT club and OPEN events are tabulated on the "Questions and Replies" page.

Shrewsbury and District M.C.C.

On March 1st the club combined their general meeting with a lantern lecture. Mr. J. E. J. Whitaker, the secretary, of Southfield, Kingsland, Shrewsbury, will be pleased to hear from intending members or from other clubs that might care to join in trials, etc.

Newcastle and District M.C.

The A.C.U. open event for April 30th is in the hands of the Newcastle and District M.C. The premier award is the Travers Challenge Trophy, a gold cup valued at 200 guineas, together with an out-right prize of the winner's own selection to the value of £15. The club will also award gold, silver, and bronze medals. The 160 mile reliability trial will start from and finish at Newcastle, and will include the steepest hills in the Wear Valley. A hill-climb on formula will be included, only to be utilised in case of difficulty in otherwise selecting an absolute winner.

Coventry (Triangle) M.C.

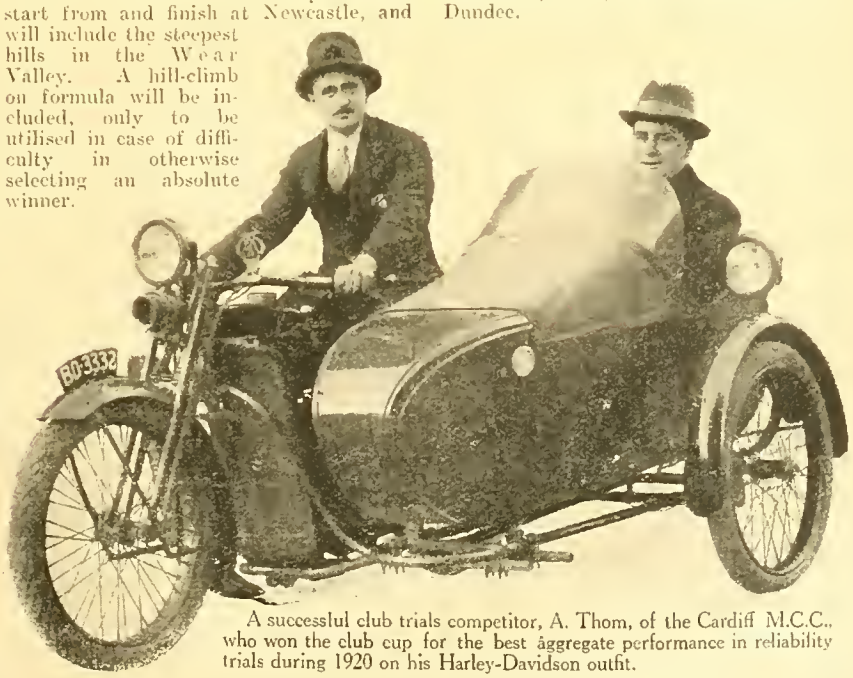
The local branch of the N.M.C.F.U. has been re-formed as above. Mr. T. Mallalieu, 90, Gorton Road, is the secretary *pro tem.*

Tamworth and District M.C.C.

At the annual general meeting, held on March 2nd, there was a large gathering of both old and new members. The opening run will take place on Easter Monday, starting from the new headquarters, the Castle Hotel, at 1.30 p.m., the objective being Stile Cop Hill.

Liverpool M.C.

A non-stop speed-judging team trial, held on the 5th inst., resulted as follows:



WINNING TEAM.—H. Burrell (3½ Rudge), N. C. Sclater (4 Norton), and S. Parker (8 Matchless sc.).

NO. 2.—T. H. Emery (2¾ Douglas), R. O. Evans (10 Calcott car), and J. H. Green (6 Martinsyde sc.).

The prize for the best individual performance not included in the winning team: J. H. Green (6 Martinsyde sc.).

Dundee and District M.C.C.

The annual general meeting of the above club was held in the A.A. Room, Dundee, on the 17th February, when officials were appointed for the ensuing season, and at a committee meeting held on February 21st an attractive programme of competitions, gipsy runs, etc., was drawn up. Particulars regarding membership may be had from the hon. secretary, Mr. J. Robertson, 12, Victoria Chambers, Dundee.

A successful club trials competitor, A. Thom, of the Cardiff M.C.C., who won the club cup for the best aggregate performance in reliability trials during 1920 on his Harley-Davidson outfit.

THE SPRING CAMPAIGN IN CLUBLAND.

In every part of the country there is marked activity in clubland. Last week-end many clubs held their opening runs and competitions, while others have already run off several events. The Coventry and Warwickshire M.C. last Saturday held another of its popular paperchases, the start of which is shown above.

KNOW YOUR LOCALITY!

IT is safe to say that few motorists are acquainted with every rideable road within ten miles of their own domicile. Too many frequent the beaten track, and Nature lovers are the losers thereby, for off the beaten track there are many villages, nooks, woods, and points of a picturesque type. Clubs that desire to combine lane driving and unfrequented rural scenery with an object in view should follow the example of the Coventry and Warwickshire Motor Club, and arrange a paper-chase, but take particular care in the selection of a "hare." No other officials are required except a timekeeper, so that all may join in. Last Saturday Sam Wright acted as "hare" for the Coventry Club, and if anyone knows the intricacies of Warwickshire byways better than he we should like to meet him. With a sack of paper shavings in the back of his 15.9 h.p. Humber car he laid a trail for the forty odd members of the club who took part which would have done credit to an intoxicated corkscrew manufacturer! Every hairpin within ten miles south of Coventry kept the competitors busy. Incidentally, they had drawn varying speeds, which they were required to average over an unknown distance which added interest to the event, so that timing one's self on the man in front was not a true guide by any means.

The results were announced by the hon. sec., Mr. J. F. Spencer, as follows:

MOTOR BICYCLES.—1, C. F. Dyer (3½ Triumph), no error.

SIDECARS.—1, H. Whitten (4½ Humber), 20s. early.

CARS.—2, Geoffrey Smith (15 Wolseley), 1¼m. late.

ESSEX M.C. OPEN HILL-CLIMB.

THERE will be twenty-two events in the motor cycle section of the Essex M.C. open hill-climb to be run on Saturday, April 2nd, at 1.30 p.m. All classes of machine are well catered for, including a class for three-wheeled cycle cars not exceeding 1,100 c.c. and Class L for touring cycle cars not exceeding 1,100 c.c., maximum weight 772 lb.

A LOSS ON THE YEAR'S WORKING OF THE A.C.U.

ON Friday last the Auto Cycle Union held its annual general meeting at headquarters. The Hon. Sir Arthur Stanley, G.B.E., M.V.O., C.B., president of the A.C.U., was in the chair, and the business transacted was chiefly of a formal nature.

In presenting the accounts for the year, Mr. Stanley Carter, the hon. treasurer, pointed out that there had, unfortunately, been a loss on the year's working, but he trusted that the increased subscription would make up for this, and that at the end of 1921 the loss would be wiped out.

Mr. Quinton Nicol congratulated the Union on its sound financial position, and thereafter there ensued several questions concerning the accounts. On the suggestion of Col. Lloyd that a profit and loss account should be shown in next year's report, the Chairman replied that the matter would be given due consideration.

There was a strong feeling expressed by the members of the London clubs present that a London Centre should be formed. Mr. Loughborough explained that under the old centre scheme the provincial clubs had been jealous of the Metropolitan Centre, and this had resulted in the failure of the scheme. Consequently the present centre arrangement has been made. The London clubs decided to join the South-eastern Centre, which is composed of some fourteen clubs. The whole position seemed somewhat involved and to be little understood.

HARROGATE M.C.C. HILL-CLIMB.

HELD in glorious weather, and well attended, Harrogate and District M.C.C.'s hill-climb for the Nunnerly Cup took place on Saturday last, resulting as follows:

WINNERS OF CUP. — B— Parkinson (2¾ Douglas) and D. T. Walker (10 Hillman car) tied.

WINNERS OF CLASSES ON FORMULA.—Class 1 (275 c.c.): W. E. Grange (2½ Excelsior). Class 2 (350 c.c.): B. Parkinson (2¾ Douglas). Class 3 (560 c.c.): E. R. Davies (3 A.B.C.). Class 4 (1,000 c.c.): P. A. Marks (4 Indian Scout). Class 5 (560 c.c.): G. Hill (3¾ Scott sc.). Class 6 (1,000 c.c.): P. A. Marks (4 Indian Scout). Class 7 (cars): D. T. Walker (10 Hillman).

Fastest time on first ascent: W. Backhouse (4 Triumph). Fastest time of day: M. Parkinson (7-9 Indian).

M.C.C. OPENS ITS 1921 PROGRAMME.

AS usual, on this occasion, the weather, good enough in the morning, was extremely bad during the time the majority of the members were on the road, late arrivals reporting rain over the whole journey. This, in itself, was unpleasant, laying aside the terrible condition of the road surface to almost the very end. If the journey down had made one think of the train, the evening wiped out all treason of this description, for the Motor Cycling Club is one of the few which know how to make a comparatively ceremonial dinner into a rather large family party were all feel at home. The speeches were commendably short ones; the Chairman's, Mr. Robert H. Head, dealing with the London-Land's End Trial, was chiefly a thanksgiving for the immense interest aroused by our criticisms of the 18 m.p.h. Porlock section and the 20 m.p.h. schedule to Lynton. Mr. Head stated definitely that tests made by the club conclusively proved that the schedule was safe if competition drivers used the average amount of care. A second speech dealt with the Chairman himself, to whose qualities and able leadership the committee testified by the presentation of a silver cigarette box. The gold medals for the London-Exeter run were distributed, and an excellent entertainment concluded a really enjoyable event, in every way worthy of the M.C.C.

The Feminine Goggles.

The Eternal Question discussed from the Standpoint of a Fashion Artist who also rides.

By PEGGY FRASER.

WHILE the male motor cyclist is not over particular regarding the neatness and suitability of his costume, if one is to judge from what one sees on the road, the question of attire is one of paramount importance to all ladies who ride.

We have not yet reached that stage when lady motor cyclists are regarded seriously as a class to be catered for by the fashion papers and, therefore, changes in "fashion" are not recorded, for the simple reason that, at present, they do not exist.

The motor cycling costume is a utility garment and to design it, a fashion artist must of necessity know the conditions under which it will be worn. Only a lady motor cyclist can appreciate or anticipate the requirements of her sister riders. It is hopeless to expect much assistance from our male creatures (they would tell us we look "stunning" if we mounted a motor cycle in an evening gown of georgette). This branch of the pastime of motor cycling we must control ourselves.

Costume designed by Miss Peggy Fraser as an outcome of experience as a motor cyclist.

For General Wear.

I am convinced that the reason there are not more lady motor cyclists is because so many of the existing riders do not make the most of opportunities to dress properly. *Apropos* of this, it is well recognised that the present-day style of dress does not enhance the appearance of the lady on a pedal cycle, while, unfortunately, there are many of my sisters of the petrol machine who turn out more like well filled sacks tied in the middle than the really dainty creatures they could be if they tried.

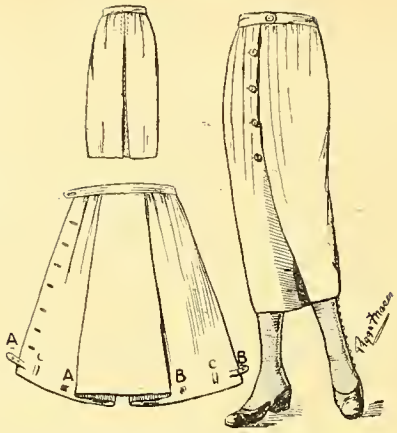
I have found the following costume most suitable for general motor cycling, and, unlike many seen in use on the road, should satisfy the most exacting riders of my sex as to smartness and appearance. I can personally vouch for its practical qualities, as being second to none. The "rig-out" comprises a three-quarter length coat, breeches, enamel calf leggings, and stout shoes, shoes and leggings being—to me—more comfortable than high boots. The shoes I have reinforced with rubber soles and heels, which it will be found eliminate much of the vibration received from footboards. The coat and breeches are made of grey suède leather (grey has the advantage of not showing the dust) and lined throughout with wool stockinette cloth. The coat has two slit pockets cut at the correct angle to prevent rain entering in case of a shower. For serious touring, I always carry a "Jap" oil-skin strapped to the back carrier, and when worn over the leather suit, it is proof against any weather.

Winter Needs.

To enable the collar to be drawn close to the neck, it is cut on the roll principle and has a strap running through slots located just where the collar turns over all the way round.

For winter travelling I have a detachable grey astrachan collar which greatly adds

An alternative costume designed by our contributor for those ladies who prefer a skirt.



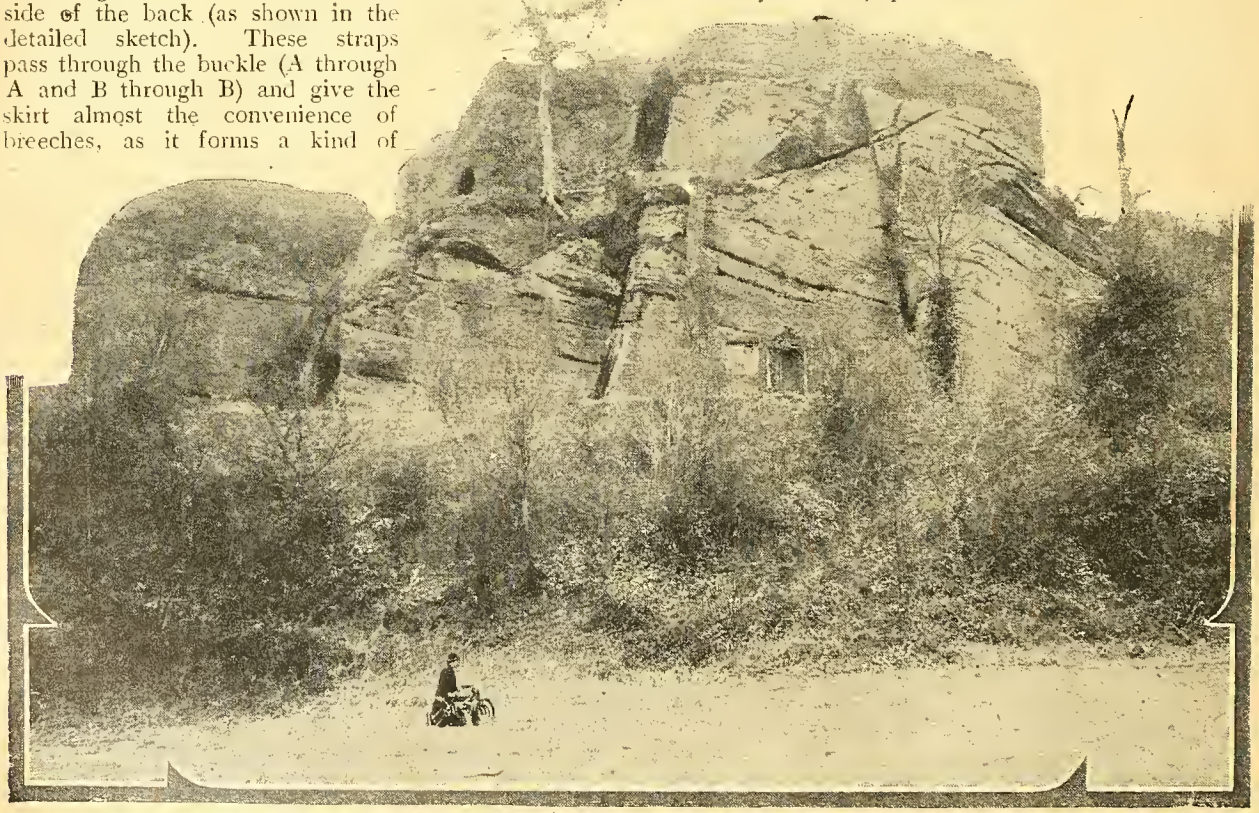
Through Feminine Goggles.—

to comfort and warmth, also I use astrachan fur for the cap and gauntlets, as the close curls show no signs of getting matted with use, like the longer haired pelts.

The sleeves are plain, as I find gauntlets the best protection. A cap on the lines of an airman's, carried out in grey suède and astrachan, completes my costume.

An Alternative Costume.

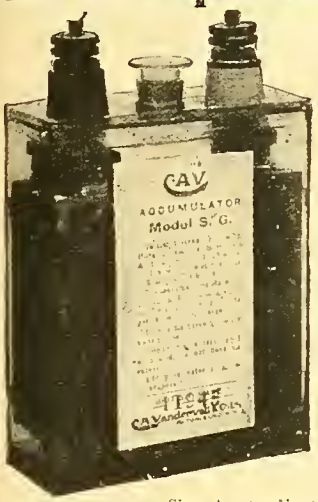
There are still many people who prefer a costume with a skirt, but an ordinary skirt is unsuitable, not to say dangerous. The accompanying sketches show a costume with a skirt designed especially for motor cycling. It buttons right down the front and has two pleats to allow fullness. At the back is a very wide inverted box pleat. When off the machine it has the appearance of a well-cut sports skirt, without any suggestion of the unbecoming divided skirt. The lady who will not bring herself to wear breeches, as suggested in my first sketch, will have objections to any other form of costume which is conspicuous. Therefore, this skirt should appeal to her. For riding purposes, it unbuttons to above the knee and is provided with a strap on each of the front edges and a buckle at each side of the back (as shown in the detailed sketch). These straps pass through the buckle (A through A and B through B) and give the skirt almost the convenience of breeches, as it forms a kind of trouser front, as shown in the sketch of the complete skirt. When fastened in this manner, it cannot catch in the wheels, etc.



Details of the second costume referred to by our fashion artist contributor. The small drawing at the top depicts the back view of the skirt, and, beneath it, the inside view, showing details of the straps

Dress Details.

When the skirt is buttoned for walking, the straps are run through slots (marked C in the detail sketch), and therefore are out of sight and cannot hang below the hem of the skirt. Breeches, of course, must be worn underneath, and these should be of the same material, and I would suggest upholsterers' fawn corduroy velveteen as the next best thing to leather for hard wear.



A wide woollen scarf is wound twice round the neck over the stand-up collar and double-breasted front of the coat, knotted at the front with the ends firmly fixed into the belt. It is a good idea to have the entire costume lined with a strong twill. A close fitting pull-on fawn velour hat with a narrow brim is very serviceable, and a leather waistcoat is indispensable. A fleece-lined waistcoat with sleeves should be chosen, and if it had two side pockets they may be found useful, but breast pockets should be avoided.

Goggles may not be very attractive, but on a really dusty day they are an absolutely essential part of the motor cyclist's equipment.

A CAVE DWELLING. Well-known to Wolverhampton, Kidderminster, and Stourbridge motor cyclists, Holy Austin's Rock, Kinver Edge, is well worth a visit from those who live further afield. The size of the rock may be judged by its comparison with the motor cycle at its base. Cave dwellings formed the subject of an article by C. G. Harper in *The Autocar* of January 29th.

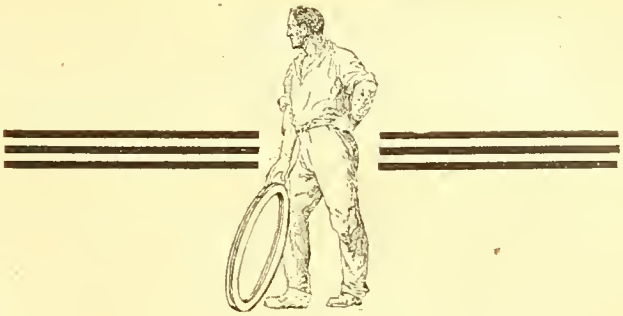
Handle-bar Watches

30-hour movement.



An excellently made handle-bar watch at a real bargain price.

Hands moved by depressing winder and turning.

Heavily nickel-plated and fitted in strong case

PRICE **15/-** EACH. Post free.

WATES BROS., 132, Charing Cross Rd., W.C.2

6,830 miles on rear tyre!

—and, our correspondent goes on to say, "Most of this mileage was done with my wife and 3 children in the sidecar. No sign of a cut or broken canvas; cover not once removed." And the rider had the added satisfaction of knowing that he had safeguarded himself and passengers from side slips, thanks to the famous three-rib tread— a tread that gets a "hold" on the greasiest road and keeps it.

Did you know that Moseley Motor Cycle Tyres are now **moulded in the form they take when inflated on the rim?** The saving of time and temper when fitting tyre to the rim is wonderful. The beads are also specially strengthened to avoid rim-cutting.

PRICES REDUCED.

EXAMPLES:

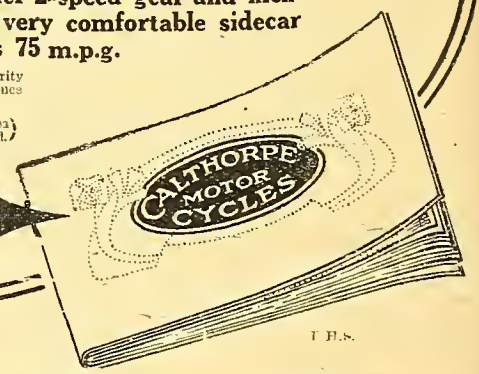
CALTHORPE MOTOR-CYCLES

If you are out for a "best value for money" machine, send for that CALTHORPE catalogue to-day—it deals with three such propositions.

Here they are—3 h.p. CALTHORPE 2-Stroke Combination, complete with lighting set (weight 190 lbs.), 110 Guineas.....3 h.p. CALTHORPE 2-Stroke Solo (weight 150 lbs.), 65 Guineas.....2¾ h.p. CALTHORPE-JAP (weight 148 lbs.), 70 Guineas.



Our 3 h.p. 2-stroke engine is equal in power to any 3½ h.p. on the market, and is fitted with roller bearings. We are one of the pioneers of roller bearings in motor cycle engines—others have followed our lead. Combination is equipped with patent lubricating system (no oil mixed with petrol); remarkably efficient spring saddle pillar; Sturmey-Archer 2-speed gear and kick-start; M-L Mag-Dyno lighting set; and light, but very comfortable sidecar Averages 20-25 m.p.h. and shows 75 m.p.g.

Remember CALTHORPE Motor Cycles have attained notable popularity for reliability, speed, and utility, whilst for general mechanical excellence and superiority of finish they are still without a serious rival.

Calthorpe Motor Cycle Co. (Minstrel & Rex Cycle Co., Ltd.)

Particulars and address of nearest Agent from

HILL BROS.,
Walsall Street,
WOLVERHAMPTON.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

TWIN MAGNETO ON SINGLE CYLINDER.

I wish to convert (if possible) a magneto intended for a twin-cylinder engine to a single anti-clockwise. The direction of running is correct, and the engine for which the magneto was designed is a side-by-side twin-cylinder, in which the pistons move together, each cylinder firing alternately, the firing points being, I believe, 360°. Can this be done? If so, in what manner? I presume one of the cams on the contact breaker would need removal, and the corresponding brush on the distributer?—D.A.N.

It would be necessary to remove one of the cams and the corresponding high-tension brush, and the magneto must be run at half engine speed. It would be advisable to substitute the remaining cam by one which keeps the points separated during about 180° of armature revolution.

HUB CLUTCH ADJUSTMENTS.

I have taken down my Triumph free engine hub (fitted to a 1914 Rover machine), as it would frequently slip when hill-climbing. The plates were in a bad state with oil and dirt. (1.) If I put in an extra plate or two, will that cause the clutch to grip? There is space enough for one or two plates, still allowing clutch to work freely. (2.) Should plates be put back greased or dry? (3.) The surface of the plates are somewhat torn. Would that cause the slipping?—A.M.K.

(1.) There is no objection to putting in two extra plates provided there is room for them. If you can only insert one extra plate you must take care that it is placed beside a similar one, that is to say, if you decide to add an inner plate it must go next to one of the same kind, otherwise you may interfere with the working of the free engine. It is best, however, to insert the extra plates in pairs if possible. (2.) The plates should be lubricated with very thin oil, such as ordinary cycle oil. (3.) The condition of the plates does not matter very much provided they are not seriously scored. The slipping is caused either by the plates being worn, or by the weakness of the springs.

RUNNING A TWO-STROKE ECONOMICALLY.

With a two-stroke 2½ h.p. single speed machine which I use, I find that I can only do 55 m.p.g. The compression is perfect, and the ignition is just correct when fully advanced, in which position I generally keep it. The machine is fitted with an Amac carburetter and a 21 jet, which is rather too small (as it will not take full air, and I cannot get a very high speed), but which I am using to save petrol. The belt is tight and the machine runs well, and is lubricated by the petroil system in the proportion of one gill to the gallon.—F.C.F.

The consumption of your machine is distinctly poor, as you might expect at least 80 m.p.g. We would suggest that you reduce the petrol level by lowering the collar on the float chamber needle until there is barely $\frac{1}{16}$th of an inch play allowed. It would then be possible to fit a slightly larger jet, and you would obtain better power for hill-climbing. A variable jet adapter which will allow you instantly to vary the jet opening might be of considerable help to you when tuning; it is well to bear in mind that a very small jet will not necessarily give the best results unless economy alone is sought.

AN OLD MODEL FOR BUSINESS USE.

A Mark III. three-speed Armstrong gear and clutch fitted to my 3½ h.p. Rover sidecar is constantly giving out through wear. I think the gears are not strong enough. Could you advise me on the matter? I believe it is a 1912 model. Do you think the gears can be made to answer satisfactorily for transporting my tools and materials in country joinery work?—F.W.P.

The three-speed gear you mention is one of a very early pattern, and we certainly do not think that it will give you permanent satisfaction if used with a heavily laden sidecar. We should strongly advise you to dispose of the machine and purchase something more up-to-date.

OXFORD v. CAMBRIDGE.

For the first time, Oxford won the annual Inter-Varsity Hill-climb last week. Here competitors are shown at the starting point on Aston Hill, near Tring

OVERSIZE TYRES FOR A TRIUMPH.

Q. What is the largest size tyre it is practicable to fit on 26×2¼in. Triumph wheels? Can one get other wheels which will take, say, 26 × 3in. tyres, suitable for Triumph frame, and, if so, where? Briefly I want to fit the largest possible tyres to a 4 h.p. countershaft Triumph. —W.N.G.

A. 26×2½in. for 2¼in. rim is the largest size of tyre normally made for these rims, but most American size 28×3in. tyres can be used on the Triumph rims. It would be advisable, however, to seek the opinion of some of the leading tyre manufacturers before ordering a cover. There is no need to fit special wheels.

TO ELIMINATE FOUR-STROKING.

Q. I have a 1920 2¾ h.p. single-speed two-stroke, and am troubled a great deal with four-stroking, especially when running slowly. I have tried jets Nos. 25, 26, and 28 in the Amac carburetter, and seem to get better results with the 25 jet, and more so when running on benzole. I do not think it is a case of too much oil, as I get very little smoke from the exhaust.—W.E.P.

A. From the rather scanty details you give, it would appear that the trouble is due to an excessive supply of fuel, although you do not say that the carburetter is flooding. We would suggest that you lower the level considerably. This is done by tapping down the collar on the float chamber needle until the float is allowed barely 1/16in. play, or you may add one or two thin washers between the top of the float and split pin on the needle.

A LIGHTWEIGHT'S SPEED.

Q. I should be very much obliged if you would help me in a diagnosis. I have a 2¾ h.p. four-stroke machine, which has run exactly 4,000 miles, being new last spring. It runs sweetly and quietly at 19 m.p.h., but develops a loud rattle at 20-23 m.p.h., and will not exceed 25 m.p.h. It has always been much the same, and up to now I have been content with its exceedingly moderate speed. The belt is tight, the crank case bolts are tight, the timing correct, the silencer clean inside, and the tyres hard. Should the machine be able to run faster? If so, I should much appreciate any suggestions you may offer. —N.B.

A. Your machine should certainly exceed 25 m.p.h., but the details you give do not sufficiently indicate the cause of the trouble. Wear of the connecting rod bearing is usually associated with a loud rattling when the machine is travelling fast at small throttle openings—that is, when running light, and it would perhaps be advisable to remove the cylinder and inspect the mechanical condition. There is no reason why a machine with such an engine should not easily attain speeds of about 35 to 38 m.p.h.

EXPERIENCES WANTED.

L.A.C. (Leeds).—Any alternative spring fork fitted to Triumph.

R.H.B. (London, S.W.).—Auto-wheel, or other cycle attachments.

Mon., Mar. 28th—Westmorland M.C.C. Open Hill Climb.

Mon., Mar. 28th—East Midland Centre A.C.U. Open Speed Trials.

Fri., April 8th, and Sat., April 9th—Western Centre A.C.U. Two-day Open Trial.

Fri., April 15th, and Sat., April 16th—Ealing and District M.C.C. London-Holyhead-London 24 hr. Open Trial.

Sat., April 16th—Yorkshire Centre A.C.U. Open Hill-climb.

Sat., April 23rd—Midland Centre A.C.U. Open Reliability Trial.

Wed., April 27th—A.C.U. One-day Trial

Sat., April 30th—Newcastle and District M.C. Travers Challenge Trophy Open Reliability Trial.

Fri., May 13th, and Sat., May 14th—M.C.C. London-Edinburgh Run.

Sat., May 21st—Western Centre A.C.U. Open Hill Climb.

Wed., May 25th—A.C.U. Silencer Trial at Brooklands.

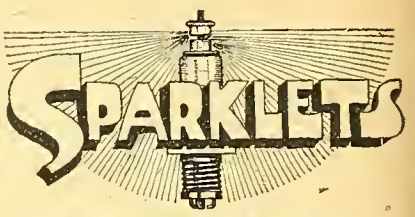
Sat., May 28th—East Midland Centre A.C.U. Open Hill Climb.

Tues., June 14th—Junior T.T. Race

Thurs., June 16th—Senior T.T. Race.

Sat., June 25th—M.C.C. Inter-team Trial for "The Motor Cycle" Cup

Mon., July 4th, to Sat., July 9th—Scottish Six Days' Trial.



Wed., July 6th, and Thurs., July 7th—Arbuthnot Trophy Trial.

Sun., July 24th—Motor Cycle Grand Prix Race in France.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

British Entries in Grand Prix.

Four B.S.A. machines have already been entered in the Motor Cycle Grand Prix race, which will take place on July 24th.

Average Second-hand Prices.

Owing to a clerical error in our table of "Prices of Second-hand Machines," 4 h.p. Norton machines have been tabulated as 1921, while the prices given actually referred to 1920 models.

Racing in Burma.

A course of ninety miles out and back again from Rangoon provided a sporting race in Burma, in which the second place was secured by A. Galstin (2¾ Douglas). His time for the 180 miles was 4h. 41m. As here, Castrol oil is popular amongst overseas speed men, and was used on the above-mentioned machine.

Price Maintenance and Reduction.

A useful price maintenance guarantee is given by the Scott Motor Cycle Co., Ltd., which is stabilising its prices until October 1st. Messrs. A. J. Stevens and Co., Ltd., take a similar line, giving June 1st as limit of their refunding offer.

Martin lightweights are being reduced by six guineas.

Catalogues Destroyed.

In consequence of a disastrous fire at their printers, the entire issue of the 1921 catalogue of the Leicester Rubber Co., Ltd., Post Office Place, Leicester, the makers of John Bull tyres and belts, has been involved, and this will naturally delay distribution. However, if it is found possible to salve any of the catalogues they will be sent to customers in due course.

Catalogues Received.

Rotherham and Sons, Ltd., Coventry: Lists describing the various tank fittings, dashboard clocks, and Bonniksen speedometers.

W. and A. Bates, Ltd., St. Mary's Mills, Leicester: Folder describing Bates "self-vulcanising" specialities, such as patches, cover patches, and repair outfits.

Triumph Cycle Co., Ltd., Coventry: A small booklet, describing the transmission of the new chain-driven Triumph and illustrating the gear box and spring drive.

Hazlewoods, Ltd., Albion Mills, Coventry: A folder embodying specifications of the 6 h.p. and 8 h.p. Hazlewood sidecar outfits. There is also an eight-paged booklet of hints on management and adjustment.

Sturmey-Archer Gears, Ltd., Lenton, Nottingham: A booklet describing the Sturmey-Archer two-speed gear for lightweight singles up to 2¾ h.p., and twins up to 3½ h.p. Riders interested in gear ratios should obtain this booklet, if only for the formula on finding numbers of teeth on engine-shaft sprocket for various reductions.

17.18.19.20.21.22.23.24.25

EACH DAY THAT PASSES LESSENS YOUR CHANCES.

You see above the number of days to Easter.

You see below the name and address of the firm who can supply you from stock with just the machine or combination you require for Easter.

But please act promptly. Don't wait until the last few days. Order at once to avoid disappointment.

We have considerably over 100 machines in stock. New 1921 Models, New 1920 Models (at reduced prices), and a good selection of thoroughly overhauled and guaranteed second-hand machines.

Call, if you can. If this is not possible, write for our full and complete List. Just your name and address on a postcard—and you will find the machine of your choice is waiting for you at—

and all leading booksellers.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns —First 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., & Co. and crossed Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. *Replies to Box Number advertisements containing remittances should be sent by registered post, but in all such cases it is advisable to make use of the Deposit System.*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1 %. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

but give it a

NEW LEASE OF LIFE

by fitting the

World-famed Philipson Pulley.

Entirely Free from troublesome and weighty complications—only two working parts—no levers, rods, wheels, etc., to worry about. Simply takes the place of the ordinary pulley. One nut secures the complete gear to the engine. Can be fitted without any alterations to most direct belt-driven engines in a few minutes.

For hill-climbing it is unsurpassed. Makes mountaineering easy.

IMMEDIATE DELIVERY.

THE MOTOR CYCLE

Insurance Policy

Testimony

THIS space will be occupied each week with copies of letters from Policy holders who have made claims. Original letters may be inspected.

Dear Sirs,

I beg to acknowledge with thanks receipt of cheque in settlement of my claim. I have forwarded same to the proper quarter.

May I take this opportunity of thanking you for the prompt and generous way in which you have dealt with my claim.

Yours faithfully.

The only safe Test of insurance is Claims. We settle Claims promptly.

DERRY & TOMS

"Quality & Service"

Kensington High Street W.8

Another 100,000 LEATHER JERKINS

When we first announced the purchase from the Government of these most serviceable garments, we were inundated with thousands of orders—indeed, the demand was so colossal that we, unfortunately, had to disappoint thousands. Now, after lengthy negotiations, we have succeeded in securing the

ENTIRE GOVERNMENT STOCK

and this week we offer the second parcel of 100,000. Men who served in the R.A.S.C. know the wonderful wet and wind-resisting qualities of these Jerkins. Every seam is double stitched, and the buttons can neither come off nor pull through the material. In the finest quality tan leather, soft and pliable, yet extremely durable, they are full size and reach below the waist, and are lined with warm, fleecy woollen material. For motor drivers and cyclists, tramwaymen, postmen, etc., and can be worn under a coat quite easily. The splendid quality leather can also be put to other uses, viz., Slippers, strong Driving Gloves, Upholstery, Book Binding, etc. Less than one-third the cost of production.
